constituents (ingredients) of the sauce, that is, the powder acting as a flavoring agent, the milk acting as a liquid medium for the powder, and the oil provided by the butter or margarine imparting smoothness, body, and flavor to the sauce. In fact, directions printed on the retail box to guide the consumer in preparing this dish require the addition of the milk and butter or margarine, with the powder to the hot macaroni. Because the presence of the butter and milk in the sauce is not optional, and because these ingredients are not present in the sauce mix, as imported, it is necessary to decide whether the imported powder is a finished, or substantially finished, food preparation as required for classification as a sauce in item 182.46, TSUS, or whether it is merely a material, an ingredient, used in the manufacture or preparation of a sauce.

The concept of sauces as "substantially complete food preparations" rather than as "materials used in the manufacture of sauces" has been the subject of prior judicial and administrative rulings. In Del Gaizo Distributing Corp., Mennella Bros. Inc. v. United States, T.D. 48376 (1936), for example, the Court held that tomato paste which consisted of tomato pulp from which all the fiber, seeds, and peel had been removed, and whose use was found to be as an ingredient in soups and in the preparation of many sauces, was classifiable under the provision for "tomatoes, prepared or preserved in any manner" under Par. 772, Tariff Act of 1930, rather than as "sauces" or "pastes".

The point that it is necessary to have a "substantially complete food preparation" to be treated as a sauce was emphasized in United States v. Neuman & Schviers Co., Inc., 18 CCPA 1 (1930), where the Court, in holding that a wine and salt mixture labeled "Sauce Theo" used in place of sherry in the preparation of various a' la Newburg dishes was not a sauce, made reference to the previously cited quotation in Boyle v. Magone and then stated:

> If a broader meaning of the word "sauce" is given than is indicated in the above quotation, it would be inclusive of any substance used to season or flavor food in the process of cooking or preparing it, and its application would lead us far afield in the classification of this character of merchandise.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077156

F14

> We agree with the court below that the article in controversy is not a sauce. It may well be a flavoring which might be used in making sauce, but, in its imported condition, it hardly responds to the word "sauce".

The fact that some sauce preparations do require the addition of other ingredients--for example, the addition of a liquid to reconsitute a powdered sauce preparation, or the addition of small amounts of seasonings or other ingredients--does not necessarily preclude classification of these products, for tariff purposes, as finished, or substantially finished, food preparations. Thus "Bisto", a powdered gravy which was to be combined with water or stock to make a gravy or to add to soups or stews has been classified, by administrative ruling, under the provision for sauces in item 182.46, TSUS, (T.D. 56211(66)). Again, a liquid consisting of various spices, oil, salt, and sugar, which was to be mixed with beef broth, or hot water and then applied to various meats for flavoring effect was also classified as a sauce in item 182.46, TSUS, (T.D. 56241 (46)). In United States v. H. J. Heinz Co. (T.D. 49557, (1938)) the Court classified a tomato sauce, designated as "Tomato 'B' Sauce", to be used in the preparation of that company's baked beans and pork product, under the provision for "sauces of all kinds" in paragraph 775, Tariff Act of 1930. In so ruling, the Court noted that, although the sauce would be mixed with the food "while the same is being prepared", that fact did not change its nature as a sauce, "nor does the fact that in use it is diluted by the addition of water with salt, pepper, and a slight amount of arrowroot added, affect its classification as sauce."

In a letter dated October 9, 1959 (File TC 462.421, circulated as C.I.E. 1478/59, October 22, 1959), Headquarters classified three sauce preparations from Italy, under the provision for sauces of all kinds in paragraph 775, Tariff Act of 1930. The last of these preparations, Pesto Alla Genovese, consisted of 40 percent basil leaf, 30 percent cheese, and 30 percent olive oil. In describing these sauces, it was noted that "(t)his merchandise is intended for use on foods as it is found in the jar, except that it is recommended that a little butter be added to the Pesto Alla Genovese."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G1

079156

In summary, simple materials, even if containing some seasoning and spices, if not containing all the ingredients essential for their use as a sauce, and if chiefly used as an ingredient in soups, sauces, and other food preparations, were considered materials only and not substantially finished sauces. On the other hand, a tomato sauce containing salt and spices, which, with the addition of olive oil was ready for use as a pizza sauce by pizza manufacturers, was ruled to be a complete sauce. Another food preparation--a mixture of spice, nut, fruit, vegetable, and fish ingredients--chiefly used in the preparation of a sauce for pasta con sarde was found to be a material rather than a finished, or substantially finished food preparation, since it required the addition of other ingredients--namely, garlic oil, tomato, onion, and fish (optional)--essential to its use as a sauce.

Powdered or concentrated sauce preparations, which required the addition of a liquid, such as water, broth, or stock, to bring them to a liquid state, were held to be substantially finished sauces. Finally, it was found that finished, or substantially finished sauces may have their seasonings adjusted, or may be allowed the addition of small quantities of non-essential ingredients, such as arrowroot (a thickener) or butter (for flavoring). In their imported condition, however, sauce preparations must be complete, that is, they must be ready to use in respect to all their essential ingredients.

In determining whether the cheese sauce mix at issue may be considered a finished, or substantially finished preparation, it is necessary to consider the ingredients which actually make up the finished sauce preparation. To review briefly, a serving of the prepared sauce will consist of 1-1/4 ounces of cheese flavored powder, one half stick (2 ounces) of butter or margarine, and 2 ounces of milk. The cheese flavored powder first, is the primary flavoring agent in the sauce. Of the two ingredients combined with the mix, the milk appears to play a similar role to that of other liquids--water, broth, or stock,-- added to other powdered or concentrated sauce mixes and, based on the rulings cited, its presence as an ingredient should not affect any determination as to the tariff status of the cheese flavored powder. The

077156

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

final ingredient added, however, the butter or margarine, is a substantial ingredient in the finished sauce (about 38 percent by weight), and is required in this large amount to impart smoothness, body, and flavor to the sauce. Because of the quantity of butter or margarine which must be combined with the cheese powder and because of the function of this ingredient it may not be disregarded or discounted in determining the tariff status of the cheese sauce mix. Accordingly, since the cheese flavored sauce mix lacks an essential ingredient--that is, the butter or margarine--it is not, in its condition as imported, a finished, or even a substantially finished food preparation, but is, by itself, only a material, or ingredient, used in the making of a sauce. Classification of this product under the provision for other sauces in item 182.46, TSUS, would therefore be precluded.

In the instant case, however, the butterfat content of the cheese flavored sauce mix is below 5.5 percent by weight, and this butterfat is almost entirely attributable to the cheddar cheese in the mix. The whey content of the cheese sauce mix, however, is over 16 percent by weight of the mix and, in itself, contains less than 5.5 percent by weight of butterfat. Consequently, in the absence of a more specific provision, and based on the composition of the mix, this office would classify this cheese flavored sauce mix under the provision for other edible preparations not specially provided for (including prepared meals individually packaged) in item 183.0040, TSUS, and subject to quotas proclaimed pursuant to Section 22 of the Agricultural Adjustment Act, as amended, in item 950.19, Part 3, Appendix to the Tariff Schedules. As no quota quantity has been allocated under item 950.19, merchandise subject to quota under this item number may not be imported into the United States.

It should be noted that an earlier New York Regional ruling letter (File 806484) was issued to the same inquirer classifying a similar cheese flavored sauce, containing over 5.5 percent by weight of butterfat, under the provision for edible preparations not specially provided for containing over 5.5 percent by weight of butterfat and not packaged for retail sale in item 182.92, TSUS, and subject to quota in item 950.23, Part 3 of the Appendix to the Tariff Schedules. As no quota quantity had been allocated to Canada under this quota,

District Director of Customs
2039 Federal Office Bldg.
909 First Avenue
Seattle, Washington 98174

Dear Sir:

Re: Application for Further Review of Protest No. 3004-4-000151

The subject application for further review concerns the classification of Brussels sprouts. Your office classified these Brussels sprouts under item 137.71, Tariff Schedules of the United States (TSUS), because you considered the imported vegetables to be fresh, chilled, or frozen for purposes of the TSUS. Protestant argues for classification under item 141.89, TSUS, as "vegetables... otherwise prepared or preserved."

ISSUE PRESENTED:

Whether blanching the Brussels sprouts for a period of six to eight minutes prior to importation constitutes more than mere blanching which traditionally has been considered to be incidental to freezing.

FACTS:

In reviewing the issue presented, it is not necessary to describe in detail the complete method for harvesting and processing Brussels sprouts. We have, however, set forth the following processing steps number 8-12 of a 12 step operation, as described by the processor:

8. The sprouts are then removed from the water to the cooking area. The cooking machine is a wire-meshed belt with injection of live steam from the top to the bottom which is enclosed in a chamber. These sprouts are cooked for 6-8 minutes at 212°F. (This stage is also referred to as "Blanching").

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

9. Sprouts are then run through cooling equipment and cooled to 60°F.

10. After cooling, sprouts are run through belt and balance of outer layers are trimmed and prepared for freezing.

    Product at this time is fully cooked and trimmed and ready for consumption.

11. Sprouts are then run through quick freezing equipment at minus 20-30°F to ensure the retention of very good quality and to avoid any deterioration.

12. Sprouts are then run through sizing machinery and are sized in three different sizes:

    a) Baby Size - from 0 - 15/16ths

    b) Small Size - from 15/16ths - 1 1/4

    c) Larger Size - from 1 1/4 - 1 1/2

    From this sizing machine, sprouts are run into cardboard totes and shipped to the United States to be packaged for final consumer packs.

The concerned import specialist, who is of the opinion that item 141.89, TSUS, represents the proper classification, toured the processing plant and reported the following observation:

> This is the second year these sprouts have been purchased by [purchaser]. They have prepared a Brussels Sprouts in Cheese Sauce package that is being test sold on the East Coast and is not available locally.
>
> [Purchaser] requires Brussels sprouts that do not need further cooking because the cheese sauce cannot be overcooked. They are unable to acquire the right kind of product in California; the only ones they have found to suit their needs are grown in British Columbia.
>
> The shipper usually uses a peroxidase enzyme test that is not as sensitive as the catalase enzyme test used by [purchaser].
>
> The Brussels sprouts are first washed, which removes the outer leaves, then sorted, discarding any over 1 1/4 inch diameter. They are then conveyed through a steaming blanch, sprayed for cool-down and frozen in bulk.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077157

G6

> I ate two Brussels sprouts that were partially cooled and found them completely tender. We then went to the lab where a number of completely frozen Brussels sprouts were placed in boiling water, brought to a boil and cooked two minutes, barely heating through. These were edible as cooked Brussels sprouts. The centers were yellow and there was no bitter taste. One lab technician was testing the blanched Brussels sprouts, using the shipper's peroxidase test which shows immediate reaction. They had not quite satisfied this test. When it showed complete, they would begin using [purchaser] catalase test, which takes 10 minutes. The sprouts we had eaten were not considered sufficiently blanched for [purchaser's] requirements.
>
> Those Brussels sprouts that do not meet [purchaser's] specifications will be sold as a frozen product to other purchasers who do not want a completely cooked product. There is a price difference of about 1 cent a pound higher for [purchaser's].

The laboratory report which concludes that item 137.71, TSUS, represents the proper classification did make the following observations:

> Our visual examination of the "whole" sprouts from all four bags found there are no visual differences. We found the centers of the sectioned "cooked" sprouts to have a creamy yellow color and sweet taste. We found the centers of the "fresh frozen" sprouts to have a brownish color and tasted sweet with a tinc of bitter aftertaste.

DISCUSSION OF LAW:

There have been a number of Treasury Decisions which have held frozen Brussels sprouts not to be "prepared or preserved" within the meaning of the TSUS. While these decisions are not in question, it should be noted that the blanching of the vegetables in question was necessary to inactivate the enzyme peroxidase and such activity stopped after 3-4 minutes maximum, and in some cases only 90 seconds. In the case under

G^

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

L51440

consideration, the U.S. purchaser requires a product which needs no further cooking because the cheese sauce in which the Brussels sprouts are packaged cannot be overcooked. This distinction between cooking and blanching is supported by dictionary definitions. See for instance, Websters' New International Dictionary, Second Edition, Unabridged (1954) which defines "blanch," "to make white by removing the skin of, as by scalding." "Cook" is defined as "to prepare (food) by boiling, roasting, baking, broiling, etc.; to make suitable for eating by the agency of fire or heat."

Accordingly, it is our conclusion that these particular Brussels sprouts are prepared or preserved within the meaning of the TSUS and should be classified under item 141.89, TSUS. None of the precedents regarding frozen Brussels sprouts are deemed to be applicable to this particular transaction; consequently, they should continue to be followed.

You are directed to grant this protest. A copy of the decision should be attached to the Form 19 Notice of Action, to be sent to the protestant.

Sincerely,

Arthur P Schaffner

M. Barry Levy, Esq.
Sharretts, Paley, Carter
& Blauvelt, P.C.
Eighty Broad Street
New York, New York 10004

Dear Mr. Levy:

Your letter dated September 4, 1985, addressed to our New York office concerning the dutiable status of a sequined tiara, has been referred to us for a direct reply to you.

The sample submitted which we assume is the product of a country entitled to the column 1 rates of duty is a sequined tiara having a "crown-like" strip glued to a plastic headband. The inner surface of the headband has a row of teeth approximately 1/8 inch in length.

The issue to be resolved is whether this tiara comes within the provision for other tiaras in item 750.20, Tariff Schedules of the United States (TSUS), or is classifiable under the provision for other combs in item 750.15, TSUS, because the supporting headband has a row of 1/8 inch teeth.

Schedule 7, Part 8, Subpart A, Headnote 2, TSUS, provides that "For the purposes of this subpart, the term 'combs' means toothed instruments having not over two rows of teeth, for adjusting, cleaning, or confining hair, or for personal adornment".

In the case of Rohner Gehrig & Co., Inc., and Etna Products Co. v. United States, Abstract No. 60940 (1957), the Customs Court held that certain devices used to hold the hair in a "pony tail" are combs rather than clinchers or barrettes. The devices involved consisted of two semi-circular tooth parts, pinned or hinged together at one end. In use the devices were opened and the hair inserted, after which they were snapped shut.

The court's rationale for its finding was hat "combs are eo nomine specially provided for, barrettes are not, and we are of the opinion that, inasmuch as the articles at bar are fairly within the description of combs, even though perhaps equally within the description of barrettes, classification should take place under the eo nomine provision for combs, rather than under the more general provisions by component material, which are less relatively specific in their application to the merchandise."

G9

We do not believe that the above-cited decision is controlling as to the classification of the sequined tiara because that decision was rendered prior to the effective date of the tariff schedules which have eo nomine provisions for barrettes and tiaras. It is our view that the court would have decided Rohner Gehrig, supra, differently had there been an eo nomine provision for barrettes in the Tariff Act of 1930, even though the teeth in the barrettes involved were a very substantial part of those barrettes. In the instant situation the teeth do not appear to be a substantial part of the tiara.

It is our position that the sequined tiara is classifiable under the eo nomine provision for tiaras in item 750.20, TSUS, regardless of the presence of teeth. However, classification of this type of merchandise should proceed on a case by case basis rather than relying on guidelines which may prove difficult to apply to product variations.

Sincerely,

Arthur P. Schaffner

Saul L. Sherman, Esquire
Schnader, Harrison, Segal & Lewis
1111 Nineteenth Street, N.W.
Suite 1000
Washington, D.C. 20036

Dear Mr. Sherman:

This is in reply to your letter of October 28, 1985, on behalf of Franco Manufacturing Co., Inc., concerning the tariff status of terry towels made in Taiwan.

Two samples were submitted -- a plain white towel, rectangular in shape, measuring 15 3/4 inches by 27 inches, and a printed (with apples, jelly jar, and a flower design) towel, rectangular in shape, measuring 14 3/4 inches by 26 inches.

First you ask if a label on the plain towel containing, along with the required country of origin, fabric content, and care instructions, the notation "DISHTOWEL" will enable that towel to be classifiable as a terry dish towel valued over 45 cents each and over $1.45 per pound, in item 366.2420, Tariff Schedules of the United States Annotated (TSUSA).

The provisions for dish towels are statistical (nonstatutory) provisions. Dish towels and other towels both fall under the same statutory classification item (366.24), but dish towels are annotated separately for quota and statistical purposes. In the absence of authority to the contrary, and to maintain the continuity and general scheme of the tariff schedules, we will apply the General Interpretative Rules (General Headnote 10, TSUSA) to the statistical annotations as well as for the statutory provisions.

"Dish towels" is, in effect, a use provision. General Headnote 10 (e)(i) provides that in a classification controlled by use (other than actual use), it is the chief use in the United States of the class or kind of merchandise to which the imported articles belong that governs. In its condition as imported, even with the "dish towel" notation on the label, the plain white terry towel belongs to a class or kind of merchandise chiefly used as hand towels. Accordingly, it is classifiable

G11

...LEASED TO THE

in item 366.2460, TSUSA, with a textile category designation of 363.

However, if the towel is imported with the words "Kitchen Towel" printed across it, as you have suggested, or with other printing similar to the second sample, then the chief use of the class or kind of merchandise to which those towels belong would be as dish towels, and they would be classifiable in item 366.2420, TSUSA, with a textile category designation of 369.

Due to the frequent changes of statistical suffixes (the last 2 digits of the item number) and the applicability of textile restraints, you should contact your local Customs office prior to importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1703-3-000248

This protest was filed against your decisions in the liquidations of the following entries:

Entry No.	Date	Date of Liquidation
82-276465	9-13-82	6-3-83
83-351744	12-14-82	6-3-83
83-351451	12-06-82	6-3-83
83-351772	12-20-82	6-3-83

FACTS:

The footwear involved consisting of men's nylon suede hiker hi-cut shoes, canvas low-cut B/B shoes, canvas hi-cut B/B shoes, nylon track shoes, Astro-turf shoes, men's nylon jogger shoes and nylon and leather upper B/B shoes were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear is classifiable under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Should the cost breakdowns submitted by the inquirer showing the footwear to be in chief value of leather be accepted?

RELEASED TO THE

077211

A3

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on this matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

With respect to stock No. 75169, Astro-turf shoes imported under entry No. 83-351772, the component value breakdown claims 1.80 square feet of Everskin leather present per pair. However, the Customs laboratory report on this style shows .82 square feet per pair on a man's size 8. Normally, this difference would be sufficient to show the chief value as being rubber and plastics but this manufacturer also shows leather inspection/sorting, cutting and trimming charges of 60 cents, plus stitching charges of 60 cents, so that leather remains the component of chief value even though the cutting and trimming costs are the highest we have seen up to the present time. However, we have no "tangible evidence" that these costs are false and we will accept the protestant's claim that stock No. 75169 is in chief value of leather.

With respect to stock No. 71868, child's nylon and leather joggers imported under entry No. 83-351772, the component value breakdown claims 1.504 square feet of leather present per pair. However, the Customs

RELEASED TO THE

A4

laboratory report on this style shows .56 square feet of leather per pair. The breakdown submitted shows a total leather cost of $1.328 and we have adjusted the leather cost as follows:

.56 X $1.328 = $0.495			
1.504	.043	Insp./sort	
	.172	cutting	Value of rubber/plastic
	.021	trimming	components on MFGR's breakdown
	.15	stitching	equals $1.235
	$.881	Leather cost	

In view of the foregoing computation stock No. 71868 should be classified under item 700.95, TSUS, as liquidated.

With respect to the component value breakdowns submitted covering the remaining stock numbers, we have no "tangible evidence" that the leather costs are false. Consequently, we will accept the documentation submitted showing them to be in chief value of leather. However, the youth's sizes 11-1/2 to 2 should be treated as unisex and liquidated under item 700.45, TSUS.

HOLDING:

The protest should be denied in part as to stock No. 71868, child's nylon and leather joggers imported under entry No. 83-351772 and allowed as to the stock numbers covering the footwear imported under the remaining entries. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P Schaffner

CLA-2 CO:R:CV:G
077212 c

077212

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005599

This protest was filed against your decision in the liquidation on February 10, 1984, of entry No. 84-121814-5 dated January 12, 1984, covering a shipment of athletic footwear manufactured in Korea.

FACTS:

The athletic footwear involved was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear involved is in chief value of leather and is therefore classifiable as leather footwear under item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

1. Does the documentation presented by the protestant show that the footwear is in chief value of leather?

2. Is Customs required to accept the cost breakdowns submitted by the protestant?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has

A6

evidence in its possession that the cost breakdown is erroneous; or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that importer submitted data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

In reviewing the component value breakdowns submitted, we note that the manufacturer has allocated his stitching costs on the basis of his material costs, counting the costs of materials with the "V" typed in the "stitching part" column. This allocation is not in agreement with the instructions set forth in T.D. 81-0186 dated December 16, 1981, that the "cost of stitching leather overlays onto the fabric uppers should be allocated among the material comprising the uppers in proportion to their relative weights."

In view of the foregoing, we have ignored the stitching charges shown on the value breakdowns because they are not calculated correctly and without the stitching charges, we note that the following styles with split leather overlays are in chief value of rubber/plastics:

Style No.	Leather Total	Rubber/Plastics Total
BOG 6277 (Inv. 2/pg. 13)	$0.894	$1.082
HOG 96410 (Inv. 3/pg. 29)	.822	.959
HOG 6380 (Inv. 3/pg. 32)	.775	.803
JOG 6380 (Inv. 3/pg. 35)	.588	.691
BOG 6274 (Inv. 4/pg. 47)	1.109	1.253
BOG 6274 (Inv. 5/pg. 66)	.894	1.082
BOG 6275 (Inv. 5/pg. 69)	.894	1.082
BOG 6277 (Inv. 7/pg. 103)	1.109	1.253

A1

It is our opinion that the foregoing listed styles were properly classified as liquidated under item 700.95, TSUS. However, with respect to the other styles which are claimed to be in chief value of leather, we have no "tangible evidence" which would permit us to categorically state that the information provided by the protestant as to component material of chief value is false. Accordingly, those styles are in chief value of leather and should be reliquidated under item 700.35, TSUS, or item 700.45, TSUS, as applicable.

HOLDING:

The protest should be denied in part as to the styles listed above and allowed as to the remaining styles covered by the protest. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Savannah, Georgia 31401

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1703-3-000105

This protest was filed against your decisions in the liquidations on January 3, 1983, of entry No. 82-254108 dated March 8, 1982, entry No. 82-254323 dated March 15, 1982, entry No. 82-254432 dated March 15, 1982, entry No. 82-254683 dated March 30, 1982, and entry No. 82-254684 dated March 30, 1982.

FACTS:

The leather/fabric sport shoes manufactured in Korea were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the sport shoes are properly classifiable according to gender and value as leather footwear under items 700.35 or 700.45, TSUS.

ISSUE:

Does the documentation provided by protestant show that the sport shoes are in chief value of leather?

LAW AND ANALYSIS:

Entry No. 82-254108

A review of the manufacturer's component material breakdown for footwear covered by invoices numbered 1 through 4 shows that such footwear is in chief vlaue of leather. Footwear covered by these invoices should be reliquidated accordingly.

TO THE

A9

With respect to the footwear covered by invoices numbered 5 through 8, there were no manufacturer's component value breakdowns submitted at the time of entry or at the time of protest. While the protestant states in its covering letter that these component value breakdowns were not requested at any time, the New York Seaport did circulate a notice through the CIE in April 1981 to all ports suggesting that they request component value breakdowns on this leather/fabric athletic footwear if it was not presented at the time of entry and required to aid in classification. Therefore, we believe that the protestant should have been aware of the necessity of supplying component value breakdowns on this type of athletic footwear. In the absence of component value breakdowns, it is our position that footwear covered by invoices numbered 5 through 8 were properly classified as liquidated under item 700.95, TSUS.

Entry No. 82-254323

As to the invoices numbered 1 through 5, we note that the manufacturer's component value breakdowns indicate that footwear covered by these invoices is in chief value of leather. We have no reason to dispute these breakdowns and footwear covered by these invoices should be reliquidated accordingly.

The invoices numbered 6 through 10 cover footwear not included in this protest.

With respect to invoices numbered 11 and 12, we find that stock No. 75164 is in chief value of rubber and plastics based on a review of H.S. Corporation's component value breakdown. Our computation is as follows:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

NO

Leather

Leather cost	$1.2764
Less salvaged waste	.0889
Net leather cost	1.1875
Cutting	.0520
Trimming	.2970
Total	$1.5365

Rubber and Plastics

Cost	$1.0614
Cutting	.0232
Trimming	.2640
Sole labor	.2222
Total	$1.5708

In accord with the above computation, footwear covered by invoices numbered 11 and 12 were properly classified as liquidated under item 700.95, TSUS.

Entry No. 82-254432

As to footwear covered by invoices numbered 1, 2, and 3, we note that the manufacturer's component value breakdowns show the shoes to be in chief value of leather. We have no reason to dispute the value breakdowns and footwear covered by those invoices should be reliquidated accordingly.

Entry No. 82-254683

With respect to invoices numbered 1 and 2, we note that the component value breakdowns submitted by the manufacturer show the footwear to be in chief value of leather. We have no reason to dispute the value breakdowns and footwear covered by those invoices should be reliquidated accordingly.

The invoices numbered 3 through 7 cover other types of footwear and are not included in this protest.

Entry No. 82-254684

As to invoice No. 1, we note that the component value breakdown submitted by the manufacturer shows the footwear to be in chief value of leather. We have no reason to dispute the value breakdowns and footwear covered by the invoice should be reliquidated accordingly.

The invoices numbered 2 and 3 cover welt footwear classifiable under item 700.29, TSUS, and are not included in this protest.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A11

077215

The invoices numbered 4 and 5 do not include any manufacturer's component value breakdowns indicating that the footwear is in chief value of leather. Consequently, in the absence of manufacturer's component value breakdowns showing the footwear to be in chief value of leather, it is our position that the footwear was properly classified in liquidation under item 700.95, TSUS.

HOLDING:

The protest should be allowed in part as to those invoices covering footwear which we have found to be in chief value of leather. These styles should be reliquidated under items 700.35 or 700.45, TSUS, as applicable. However, youth's sizes 11 1/2 to 2 should be treated as unisex and reliquidated under item 700.45, TSUS. The protest should be denied as to the remaining footwear.

A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

for Harvey B. Fox
Director, Classification
and Value Division

District Director of Customs
Boston, Massachusetts 02109

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0401-3-00903

This protest was filed against your decisions in the liquidations of the following entries:

Protest No.	Entry No. and Date	Date of Liquidation
82-265307-8	11-08-82	8-26-83
83-268333-6	6-28-83	8-26-83
83-264953-2	6-08-83	8-15-83

FACTS:

Certain athletic footwear manufactured in Korea was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather and are therefore classifiable under the provisions for leather footwear in item 700.35, TSUS, or 700.45, TSUS, depending on gender and value per pair.

ISSUE:

1. In determining component material of chief value of footwear should the values of the plastics and rubber components be broken out separately?

2. Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

DOCUMENT MAY BE RELEASED TO THE PUBLIC

A13

LAW AND ANALYSIS:

It has been consistently our position that in determining component material of chief value of footwear that the values of the plastics and rubber components should be combined.

We agree with your finding that the shoes covered by entry No. 83265307-8 and the 1,464 pairs of shoes going to Sears on invoice No. 1 covered by entry No. 83264953-2 are in chief value of leather and are classifiable as claimed.

The component material breakdowns submitted by the protestant covering 12,600 pairs going to Zayres on invoice No. 2 covered by entry No. 83264953-2 and the 16,800 pairs of shoes covered by entry No. 83268333-6 show that rubber and plastics constitute the component material of chief value of the shoes. Therefore, these shoes were properly classified under item 700.95, TSUS.

HOLDING:

The protest should be allowed in part as to these shoes covered by entry No. 83265307-8 and the 1,464 pairs of shoes going to Sears on invoice No. 1 covered by entry No. 83264953-2. The protest should be denied in part as to the 12,600 pairs of shoes going to Zayres on invoice No. 2 covered by entry No. 83264953-2 and the 16,800 pairs of shoes covered by entry No. 83268333-6. A copy of this decision sould be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0401-4-000785

This protest was filed against your decision in the liquidation on July 18, 1984, of entry No. 84-368692-4 dated June 26, 1984, covering a shipment of athletic shoes manufactured in Taiwan.

FACTS:

The women's vinyl flatties involved were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather and are therefore classifiable as leather footwear under item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Does the documentation presented show that the shoes are in chief value of leather as claimed by the protestant?

LAW AND ANALYSIS:

The [illegible] presented is sparse. The CF 5523 for the shipment states in column 9 that the shoes are in chief value of plastic. We have no reason to doubt this statement inasmuch as a detailed component material breakdown apparently has not been submitted.

In view of the foregoing, it is our opinion that the shoes were properly classified in liquidation under item 700.95, TSUS.

B1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

HOLDING:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005088

This protest was filed against your decisions in the liquidations on February 10, 1984, of entry No. 84-190434-9 dated December 25, 1983, and entry No. 84-190436-5 dated January 3, 1984, covering shipments of athletic footwear manufactured in Korea.

FACTS:

The leather/nylon joggers involved were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather and are therefore classifiable under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

The protestant also claims that the footwear was classified as not being "of leather" based on an erroneous theory of law that when determining component material of chief value for the purposes of classification under items 700.35, 700.45, and 700.95, TSUS, the separate values of "rubber" and "plastics" are combined before comparing them to the value of the "leather." It is the protestant's position that the value of the rubber and the plastics must be broken out separately.

B3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

ISSUE:

1. In determining component material of chief value of footwear, should the individual values of the plastics and rubber components be broken out separately?

2. Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

It has been consistently our position that in determining component material of chief value that the values of the plastics and rubber components should be combined.

The manufacturer's component value breakdowns reflect the following costs:

Entry No. 84-190434-9

Invoice No. 1	Leather Costs		Rubber/Plastics Costs	
(M/B Velcro Joggers)	M	B	M	P
	$1.37	$1.29	$0.96	$0.89
cutting	.09	.09	cutting .19	.19
trimming	.03	.03	trimming .17	.17
	$1.49	$1.41	sole labor .20	.20
			$1.52	$1.45

Invoice No. 2	Leather Costs	Rubber/Plastics Costs
(Child's Velcro Joggers)	$1.13	$0.77
cutting	.09	cutting .19
trimming	.03	trimming .17
	$1.25	sole labor .20
		$1.33

"Sole labor" listed under the rubber/plastics components above covers the costs of grinding and buffing the different layers of the bottoms. LD 81-0186 dated December 16, 1981, specified that these costs should be allocated among the materials comprising the bottoms. It is not possible to allocate the stitching charges above because there is no indication of weights on the various components comprising the uppers.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B4

It is our position that a review of the manufacturer's component breakdown on entry No. 84-190434-9 itemized above shows that the joggers are in chief value of rubber/plastics. Consequently, they were properly classified in liquidation under item 700.95, TSUS.

As to entry No. 84-190436-5, we note that the cost breakdown submitted on Invoice No. 2 has a somewhat different format but shows a value for the leather components of $0.9275 against $0.715 for the rubber/plastics components. The manufacturer has added 15 cents for stitching leather to leather but even disallowing this charge, leather would still be the component of chief value based on the manufacturer's figures. In view of the foregoing it is our position that Invoice No. 2 should be reliquidated under item 700.45, TSUS.

HOLDING:

The protest is allowed in part as to that footwear covered by entry No. 84-190436-5 (Invoice No. 1). The protest is denied in part as to that footwear covered by entry No. 84-190434-9 (Invoices Nos. 1 and 2). A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005093

This protest was filed against your decisions in the liquidations on January 20, 1984, of entry No. 84-190421-3 dated November 26, 1983, and entry No. 84-190422-6 dated November 25, 1983, covering shipments of athletic footwear manufactured in Korea.

FACTS:

The leather/nylon joggers involved were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

The protestant maintains that in determining component material of chief value of footwear the values of the rubber and plastics must be broken out separately.

ISSUE:

1. In determining component material of chief value of footwear, should the values of the plastics and rubber components be broken out separately?

2. Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

B6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

LAW AND ANALYSIS:

It has been consistently our position that in determining component material of chief value of footwear that the values of the plastics and rubber components should be combined.

The manufacturer's component value breakdowns submitted with the entries reflect the following costs:

Entry No. 84-190421-3

	Leather Costs		Rubber/Plastics Costs	
Invoice No. 1				
Stock No. 1387		$1.05		$0.79
(Child's Velcro Joggers)	cutting	.09	cutting	.15
	trimming	.03	trimming	.10
	Total	$1.17	Sole labor	.20
			Total	$1.24

	Leather Costs			Rubber/Plastics Costs		
Invoice No. 2		M	B		M	B
Stock Nos. 1978						
1478		$1.37	$1.29		$0.96	$0.89
(M/B Velcro Joggers)	cutting	.09	.09	cutting	.19	.19
	trimming	.03	.03	trimming	.17	.17
	Total	$1.49	$1.41	sole labor	.20	.20
				Total	$1.52	$1.45

Entry No. 84-190422-6

		M	B		M	B
Stock Nos. 1978						
1478						
(Men's Velcro Joggers)		$1.37	$1.29		$0.96	$0.89
	cutting	.09	.09	cutting	.19	.19
	trimming	.04	.04	trimming	.17	.17
	Total	$1.50	$.142	sole labor	.20	.20
				Total	$1.52	$1.45

It should be noted that "sole labor" listed under the rubber/plastics components covers the costs of grinding and buffing the different layers of the bottoms. LD 81-0186 of December 16, 1961, stated that these costs should be allocated among the materials comprising the bottoms. However, it is not possible to allocate the stitching charges on the above

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B1

because there is no indication of the weights of the various components comprising the uppers.

Our analysis of the manufacturer's component cost breakdowns shows that rubber/plastics constitute the component material of chief value of this footwear. Consequently, it is our view that classification under item 700.95, TSUS, was appropriate.

HOLDING:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-006349

This protest was filed against your decision in the liquidation on March 16, 1984, of entry No. 84-190447-5 dated February 2, 1984, covering a shipment of athletic footwear manufactured in Korea.

FACTS:

Certain men's and boys' leather/nylon joggers were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear is properly classifiable under the provision for leather footwear in items 700.35 and 700.45, TSUS, according to gender and value per pair.

ISSUE:

(1) Does the documentation provided by the protestant support its claim that the footwear is in chief value of leather?

(2) Is Customs required to accept the component material breakdown submitted by the protestant?

LAW AND ANALYSIS:

The value breakdowns submitted with the entry of the subject footwear are as follows:

MAY BE RELEASED TO THE

B9

Invoice No. 1

	Leather Costs	Rubber and Plastic Costs	
(Men's Nylon/Lea Joggers)	$0.84		$0.77
cutting	.09	cutting	.19
trimming	.03	trimming	.10
	$0.96	sole labor	.20
			$1.26

Invoice No. 2

(Boys' Velcro Jogger)	$1.00		$0.59
cutting	.09	cutting	.10
trimming	.01	sole labor	.14
	$1.10		$0.83

Invoice No. 3

(Men's Velcro Jogger)	$1.32		$0.76
cutting	.10	cutting	.10
trimming	01	sole labor	$ .14
	$1.42		$1.00

The "sole labor" costs listed under the rubber and plastics components presumably covers the costs of grinding and buffing the different layers of the bottoms. Ordinarily these costs should be allocated among the materials comprising the bottoms. However, it is not possible to allocate stitching charges on the above because there is no indication of the weights of the various components comprising the uppers.

With respect to the 7200 pairs of athletic shoes covered by invoice No. 1, it is our position based on the cost information supplied by the manufacturer that those shoes were in chief value of rubber/plastics and were properly classified as liquidated under item 700.95, TSUS.

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous; or (3) the cost breakdown is so patently inaccurate on its face that Customs officers

B10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that importer supplied data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses. With respect to the component material breakdowns covering invoices numbered 2 and 3, we do not find any "tangible evidence" which would refute the figures supplied by the manufacturer. Consequently, such footwear is in chief value of leather and should be classified under items 700.35, and 700.45, TSUS, according to gender and value per pair as claimed by the protestant.

HOLDING:

The protest should be denied in part as to that footwear covered by invoice No. 1. The protest should be allowed in part as to that footwear covered by invoices numbered 2 and 3. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

This ruling concerns the tariff status of woven inked typewriter ribbon imported in material lengths.

ISSUE:

The issue presented is whether woven typewriter ribbons that have been inked are classifiable as coated or filled fabrics and, if not, whether they are more correctly classifiable under the provisions for articles of textile materials, not specially provided for, or under the provisions for narrow fabrics.

FACTS:

On June 18, 1985, the Customs Service ruled (file 074455) that certain woven nylon ribbons were classifiable under the provision for other woven fabrics, of man-made fibers, coated or filled, in item 356.40, Tariff Schedules of the United States (TSUS). The ruling was made on the basis that the ink visibly and significantly affected the surface or surfaces of the fabric otherwise than by a change in color, and amounted to a reversal of Customs prior position, as evidenced by T.D. 70-135(13) and T.D. 70-161(4), which was to classify the subject merchandise under the provision for articles of textile materials, not specially provided for, of man-made fibers, in item 389.60 (now 389.62), TSUS.

LAW AND ANALYSIS:

It is contended that our ruling of June 18, 1985, should be rescinded because:

(1) The ink does not visibly and significantly affect the surface or surfaces of the woven ribbon otherwise than by a change in color, and, therefore, it cannot be considered a coating or filling for tariff purposes;

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B12

(2) The Customs Service has an established and uniform practice to classify inked woven ribbons in material lengths under the provisions for articles of textile material, not specially provided for, and is prohibited by regulation from administratively changing that practice without going through a formal change of practice procedure; and

(3) Inked woven ribbons are not commonly or commercially considered to be coated or filled fabrics.

Surface Character:

Headnote 2(a), Subpart 4C, Schedule 3, TSUS, defines the phrase "coated or filled" as follows:

> 2. For the purposes of the tariff schedules --
> (a) the term "coated or filled", as used with reference to textile fabrics and other textile articles, means that any such fabric or other article has been coated or filled (whether or not impregnated) with gums, starches, pastes, clays, plastics materials, rubber, flock, or other substances, so as to visibly and significantly affect the surface or surfaces thereof otherwise than by change in color, whether or not the color has been changed thereby;

In H. Rosenthal Co. v. United States, 81 Cust. Ct. 77, C.D. 4769 (1978), aff'd 67 CCPA 8, C.A.D. 1236 (1979), the court ruled that a coating for tariff purposes need not be visible to the naked eye, or even under a microscope; it need only visibly affect the surface of a fabric and this is satisfied if the fabric is visibly stiffer than the same fabric in an uncoated condition.

Following the decision in Rosenthal, Customs published T.D. 81-219, which stated that, in view of the court's holding, Customs would consider the surface of a fabric to be visibly affected if, among other things, "the coating or filling material imparts a shine, luster or glossy appearance, or a dull appearance, that is noticeable by a casual examination." While

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077247

B13

no samples were submitted, based on our general experience with inked typewriter ribbons, it appears that the ink meets the quoted criteria in T.D. 81-219.

Practice:

There are only two ways for an established and uniform practice to develop — (1) publication of the full text of a Customs ruling in the Customs Bulletin, section 177.10(b), Customs Regulations (19 CFR 177.10(b)), and (2) uniform liquidations over a long period of time, Heraeus-Amersil, Inc. v. United States, Slip Op. 84-13, 600 F. Supp. 221 (1984).

Section 177.10(c)(1), Customs Regulations (19 CFR 177.10(c)(1)), requires Customs to proceed with a formal change of practice procedure prior to administratively changing an established and uniform practice if the change will result in the assessment of a higher rate of duty or if the change results in the assessment of a lower rate of duty and the matter is of sufficient importance to involve the interests of domestic industry. It is the latter requirement that is in issue here.

Domestic industry has made it clear that our ruling of June 18, 1985, may have a significant adverse effect on it. However, before section 177.10(c)(1) can become operative, there must also be a finding that the ruling changes an established and uniform practice. We believe there exists a substantial question whether the appropriate portion of section 177.10(c)(1) may be invoked after Customs has issued a ruling. However, since it is determined that no practice existed with respect to the subject merchandise, we need not decide, at this time, the applicability of the second portion of section 177.10(c)(1) to already issued rulings.

In view of our finding that there exists no practice applicable to inked woven ribbons imported in material lengths, the following

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

071247

B14

observations are in reply to positions submitted to Customs.

1. Abstracted rulings, such as T.D.'s 70-135(13) and 70-161(4), do not establish a practice. See Ditbro Pearl Co., Inc. v. United States, 72 Cust. Ct. 1, C.D. 4497 (1974), aff'd 62 CCPA 95, C.A.D. 1152 (1975); Borneo Sumatra Trading Co., Inc. v. United States, 56 Cust. Ct. 166, C.D. 2624 (1966).

2. The existence of an administrative (statistical) annotation, in this case item 389.6255, does not establish a practice. Item 398.6255 is an administrative subdivision of the statutory item 389.62 and as such is inserted into the Tariff Schedules of the United States Annotated (TSUSA) by a committee established by section 484(e), Tariff Act of 1930, as amended (19 U.S.C. 1484(e)). It is not a finding of a practice and is neither indicative of nor evidence of the existence of a practice. In fact, item 389.6255 is applicable to all woven inked ribbons of man-made fibers, classifiable under item 389.62, not just those ribbons imported in material lengths, which are here in issue.

3. The inquirer is correct in its observation that a practice may be shown by uniform liquidations at various ports over a period of time. However, our National Import Specialist concerned with this merchandise advises that no practice based on liquidations exists because this merchandise, woven inked ribbons in material lengths, has not been imported, or if it has, such importations are so few and so scattered that they cannot reasonably constitute an established and uniform practice. We have polled all our districts and our findings support the views of the National Import Specialist. We are unable to find any significant importations of the subject merchandise, and the inquirer has failed to provide any evidence, or indication, of such.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Commercial Designation:

Customs has been presented with ample and convincing evidence that inked typewriter ribbons and similar inked fabrics are not commercially known, considered, or placed in the same category as coated or filled fabrics. The evidence consists of affidavits, lexicon definitions, and distinctions made in the trade and commerce of this country between inked ribbons and coated or filled fabrics. Apparently, "coated or filled" fabrics refers in the wholesale trade to textiles which have been treated with the intention that the fabric characteristics be permanently altered, while an inked ribbon merely serves as a medium for the storage and transmission of the ink.

It is a cardinal rule that tariff terminology is given its common and commercial meaning, and where those two are different, the commercial designation prevails. Florsheim Shoe Co. v. United States, 71 Cust. Ct. 187, C.D. 4495 (1973). However, this rule does not normally apply when a term is otherwise defined in the tariff schedules. Schott Optical Glass, Inc. v. United States, 67 CCPA 32, C.A.D. 1239 (1979). It follows, therefore, that where a tariff term is defined, and that definition is unambiguous, the definition must take precedence over all other factors, including the common or commercial meaning. It also follows that since legislative history cannot be used to create an ambiguity in an otherwise clear and unambiguous statute, United States v. Corning Glass Works, 66 CCPA 25, C.A.D. 1216 (1978), commercial designation also cannot be used to create an ambiguity in an otherwise clear and unambiguous statutory definition. It was with these principles in mind that the ruling of June 28, 1985, was issued.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077247

C2

However, in reviewing the entire matter, we now recognize that an inherent ambiguity does exist with respect to the headnote definition of "coated or filled," Rosenthal, supra, notwithstanding. That phrase is defined in terms of itself -- "coated or filled .. means that any such fabric ... has been coated or filled ..."

Therefore, what purports to be a definition is really an explanation (of what substances can be coatings or fillings) coupled with a requirement (that the substances affect the surface(s) of the fabric otherwise than by color). Read literally, a fabric can be coated or filled but not qualify for classification as such because it does not have a sufficient amount of coating of filling to be a coated or filled fabric for tariff purposes. In actuality Headnote 2(a) leaves open the definition of "coated of filled."

We note the United States Customs Court decision in Bruce Duncan Co., Inc. v. United States, 80 Cust. Ct. 48, C.D. 4736 (1978), where the court considered, in determining whether a fabric was coated or filled, the fact that machinery applying plastics to the fabric was known as "coating ... equipment," that the mechanics of applying the plastics to the fabric was called a "coating printing process" and that manufacturers of the merchandise considered the fabrics "coated" (at pg. 50).

While no specific industry definition of "coated or filled" has been presented to Customs, nor are we aware of any, as stated previously, it is clear from the information that has been submitted that the process of inking ribbons is not known in the trade and commerce as a coating process. Accordingly, even though the ink may visibly and significantly affect the surface(s), the fabric is not "coated or filled" with ink, and is not, therefore, classifiable in item 356.40, TSUS.

077247

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C3

Articles vs. Narrow Fabrics

We have also reviewed the original classification of inked ribbons in material lengths under the provisions for articles of textile materials not specially provided for. In examining pertinent court cases, there appears some authority to support such classification (e.g., Boyle Needle Co. v. United States, 5 Ct. Cust. Appls. 43, T.D. 34009 (1913); J. B. Hendriques Inc. v. United States, 46 CCPA 54, C.A.D. 695 (1958).

However, in our view, the more correct position is that the subject merchandise is classifiable as material, rather than as an article. In Harding Co. v. United States, 23 CCPA 250, T.D. 48109 (1936), rolls of brake lining material, which could reasonably only be used to make brake linings, were held to be material because they were not dedicated, in their imported condition, to the making of any particular brake lining. See also Terumo-America, Inc. v. United States, 2 CIT 121 (1981), where glass rods in 48 inch lengths, dedicated for use in thermometers, and incapable of being made into anything else, but which had not attained an individuality as finished or unfinished thermometers, were held to be material (at pg. 125). The court stated, "it is well established that the mere fact that imported merchandise is dedicated to use in making particular articles or parts does not take the merchandise out of the class of 'material'" (at pg. 126).

As material, the merchandise is specially provided for, under the provision for other narrow fabrics, of man-made fibers, ribbons, in item 347.60, TSUS. Narrow fabrics are defined in Headnote 2, Subpart 4A, Schedule 3, as, among other things, woven fabrics not over 12 inches in width, with fast edges. The typewriter ribbons clearly meet this definition, whether inked or not inked.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077247

c4

HOLDING:

Woven inked typewriter ribbons are classifiable under the provisions for narrow fabrics in Subpart 4A, Schedule 3, TSUS, and not as coated or filled fabrics or as articles of textile materials not specially provided for.

EFFECT ON OTHER RULINGS:

In accordance with section 177.9(d), Customs Regulations (19 CFR 177.9(d)), our ruling of June 18, 1985, file 074455, and the rulings on which T.D.'s 70-135(13) and 70-161(4) are based, are hereby modified to reflect the holding of this ruling.

Sincerely,

Harvey B. Fox

Chief, Customs Information Exchange
United States Customs Service
New York Seaport
6 World Trade Center
Room 450
New York, New York 10048

Dear Madam:

A Customs Form 6431, dated July 18, 1984, from the port of Pembina, North Dakota, concerning entry No. 85-141685-6, dated November 20, 1984, relates to a difference in the classification of paper used for the making of envelopes from Canada. The case is listed on page 1 of the most recent list of differences in CIE N 89/79 Suppl. 44, dated December 13, 1985. The file was transmitted to Headquarters on October 30, 1985.

FACTS:

The imported product is a kraft paper. Pembina advises us in the submitted CF 6431 that the chief use of this particular paper is for the making of envelopes. Pembina points out that these envelopes need paper of certain qualities, no curl, high bursting strength and tear resistance, sizing, gluing qualities, pick and hardness and is not designed to be used by high speed printing presses. Pembina also points out that this wrapping paper does not fit the analysis of commercial specifications, including government specifications, for either writing or printing papers.

ISSUE:

Whether this paper, designed for the making of envelopes, should be classified as wrapping paper under item 252.81, Tariff Schedules of the United States (TSUS) as book paper and printing paper, not specially provided for, under item 252.67, TSUS, or as other, not specially provided for, weighing over 18 pounds per ream, under item 252.90, TSUS.

C6

DISCUSSION OF LAW:

In D. C. Andrews and Co. of Mass. v. United States, 55 Cust. Ct. 354 (1965), the court held that the protestant had not overcome the burden that certain kraft paper, composed of 100 percent sulphate pulp, and chiefly used for the making of tags was classified as paper, not specially provided for, in paragraph 1409, of the Tariff Act of 1930, as amended. In so holding, the Court pointed out that the subject paper being of a class or kind used for the making of tape, labels, and file folders was not synonymous with their understanding of wrapping paper uses, that is, enclosing and covering a package. This definition of wrapping paper is consistent with our understanding of the term. See, for instance, the definition of wrapping paper contained in the Dictionary of Paper, 3rd. Edition (1965) which provides, "a general term applied to a class of papers made of a large variety of furnishes on any type of paper machine and used for wrapping purposes."

Internal Advice 117/83, held certain Windsor Wove Envelope paper to be classified in item 252.67, TSUS, as printing paper; however, the product under review now is so different from Windsor Wove Envelope paper that we do not find Internal Advice 177/83 to be controlling. Accordingly, we find the rationale set forth in Andrews, supra, to be controlling and the merchandise should be classified in item 252.90, TSUS, the successor to paragraph 1409, Tariff Act of 1930, as amended.

CONCLUSION:

The paper should be classified in item 252.90, TSUS.

Sincerely,

Arthur P Schaffner

New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-006348

This protest was filed against your decisions in the liquidations of the following entries.

Entry No.	Dated of Entry	Date of Liquidation
83-337996-6	6-05-83	3-02-84
84-190435-2	1-05-84	3-02-84
84-190440-4	1-12-84	3-02-84
84-190441-7	1-12-84	3-02-84

FACTS:

Certain leather/nylon joggers were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear is properly classifiable under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Should the cost breakdowns submitted by the protestant showing the footwear to be in chief value of leather be accepted?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the

c8

cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on this matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

The manufacturer's component value breakdown submitted on Entry No. 84-190435-2, Stock No. 18981-9, Patt. No. KTN2414, Boy's Velcro Jogger reflects the following costs:

Leather		Rubber/Plastics	
Material cost =	$1.14	Rubber/plastic material =	$0.89
Cutting cost =	.09	Cutting cost =	.19
Trimming cost =	.03	Trimming cost =	.17
	$1.26	Outsole labor =	.20
			$1.45

The foregoing cost breakdown shows that the shoes covered by the breakdown were in chief value of rubber/plastics and therefore, were properly classified under item 700.95, TSUS, as liquidated.

A review of the manufacturer's cost breakdown submitted covering the remaining footwear liquidated under item 700.95, TSUS, shows that the footwear is in chief value of leather.

HOLDING:

The protest is denied in part as to the Boy's velcro joggers, stock No. 18981-9, Patt. No. KTN2414 covered by Entry No. 84-190435-2. The protest is allowed as to the other footwear covered by the remaining three

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077268

C9

entries. It should be noted that any youths' sizes 11-1/2 to 2 should be treated as unisex and liquidated under item 700.45, TSUS. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Scuffleri

Mr. Marvin Talbott
Laser Arts
1712 Cathedral
Plano, Texas 75023

Dear Mr. Talbott:

This is in reply to your letter dated November 8, 1985, requesting a ruling on the tariff classification of holograms. Neither a sample nor a description of the item to be imported was provided, although a pictorial explanation of how a hologram was made was provided.

Assuming the holograms are made in the manner described in the Holography Handbook, they would be classified under item 274.50, Tariff Schedules of the United States (TSUS), as a photograph not specially provided for, other, carrying a 1986 rate of duty of 3.2 percent ad valorem. This classification would occur because Headnote 2(d), Part 5, Schedule 2, TSUS, defines the term "photographs" as embracing "only pictures other than motion pictures, produced on photosensitive materials, and includes positive and negative images on exposed, or exposed and developed, photographic film," and because of the dictionary definition of the term hologram. See for instance, the definition contained in the Second College Edition of Websters' New World Dictionary (1972), which defines "hologram" as:

> a photographic plate containing the record of the interference pattern produced by means of holography.

Sincerely,

Arthur P Schaffner

Steven P. Kersner, Esq.
Brownstein, Zeidman & Schomer
Suite 900
1401 New York Ave., N.W.
Washington, D.C. 20005-2101

Dear Mr. Kersner:

Under the authority of section 177.1, Customs Regulations, you have requested, on behalf of Inner Secrets, Inc., a ruling on the tariff classification of ladies' undergarments. Samples were submitted along with your request dated November 7, 1985. The initial request was supplemented by a letter dated November 26, 1985, which was followed by a meeting at Headquarters on February 3, 1986, and additional submissions of February 3, and February 5, 1986.

The garments are composed of a woven fabric that is a blend of 65 percent polyester and 35 percent cotton. The first sample is described as a "bustier camisole" which has wire cups, eight panels with plastic stays, and a traditional hook closure found on brassieres. The plastic stays are used for stiffening the garment. A textile bow is located between the two cups.

The other sample described as "tap pants" is a short-like brief with a scalloped edging. On both sides of the garment there are slits extending approximately 2-1/2 inches. Textile bows are located at the end of each slit.

You point out in your letter that Inner Secrets is a company engaged in the importation, sale, and marketing of underwear. It is your view that the garments are classifiable as underwear in item 378.05, Tariff Schedules of the United States (TSUS) under category 652, because they are imported, sold, and marketed as a set.

Relying on the recently decided case of Mast Industries, Inc. v. United States, Slip Op. 85-114 (October 28, 1985), where the court held that certain nightshirts composed of cotton twill fabric having the weight and softness appropriate for nightwear were not classifiable under the eo nomine provision for shirts, you argue that the garments in question are underwear and not outerwear.

RELEASED TO THE

C2

The class or kind of merchandise that is considered to be underwear for tariff purposes consists of garments worn next to the skin and under outerwear. It is our view that the "tap pants" are too revealing to be worn as outerwear. Thus, they belong to a class of garments known as underwear and are classifiable as other underwear ornamented, women's, of man-made fibers in item 378.0576, Tariff Schedules of the United States Annotated (TSUSA) dutiable as the rate of 28.3 percent ad valorem. The category designation for this classification is 652.

You contend that the undergarment covering the upper torso is not classifiable as a brassiere because it is made from woven fabric; is not sold according to cup size; is not sold in the bra department; and does not satisfy the definition of brassieres as "women's undergarments designed to support the breast" found in the Summary of Trade and Tariff Information covering body supporting garments (USITC Publication No. 841, January 1978).

Although we agree that this garment is not composed of a traditional bra-like material, we are persuaded that it is a structured garment designed to support the breast. Given its wire cups that provide support, plastic stays which create eight disparate panels, and hook closure, it is distinguishable from the knit tank top that Customs ruled was classifiable as underwear in Headquarters Ruling Letter 076052 dated May 24, 1985.

Even if we were to find that the "bustier camisole" were sold in the underwear section of department stores, it is well settled that while the manner in which an article is merchandised is one of the factors to be considered in determining its classification, it is not determinative. Russ Berrie & Co., Inc. v. United States, 76 Cust. Ct. 218, C.D. 4659 (1976). Thus, the undergarment is classifiable under the provision for brassieres and similar body-supporting garments for women and girls in item 376.2430, TSUSA, under category 649, with duty at the rate of 32 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Beiley & Pevsner
7600 Southwest 57th Avenue
Suite 107
Miami, Florida 33143

Dear Ms. Pevsner:

Your letter of November 8, 1985, concerns the dutiable status of an ethanol-ethylbenzene mixture from Brazil or Argentina.

You state that your client, BEH Chemicals Corp., proposes to import a mixture consisting of 2 to 20 percent ethylbenzene and 98 to 80 percent ethanol.

A mixture of ethanol and ethylbenzene containing an amount equal to 7 percent or more by weight of ethylbenzene is classifiable as a benzenoid mixture in item 407.16, TSUS. Such a mixture containing less than 7 percent ethylbenzene is classifiable under the provision for ethanol in item 427.88/901.50, TSUS. The rate of duty is 3 percent ad valorem plus 60 cents per gallon. Under item 407.16, if the mixture is a product of a GSP eligible country, it would be entitled to duty-free treatment, if all the requirements are met.

Sincerely,

John T. Rath

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3001-3-000517

This protest was filed against your decisions in the liquidations on August 12, 1983, of entry No. 986370 dated January 24, 1983, entry No. 987397 dated March 17, 1983, entry No. 987208 dated March 8, 1983 and entry No. 988553 dated May 19, 1983.

FACTS:

The merchandise involved consists of fabric/leather athletic footwear produced in Korea which was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear is in chief value of leather which requires its classification under the provisions for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Is Customs required to accept the component cost breakdowns submitted by the protestant?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D1

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous; or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that importer-submitted data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

The value breakdown provided by the manufacturer with respect to footwear designated as stock No. 71360 and imported under entry No. 986370 is as follows:

Leather purchased = .55 sq. ft.	leather cost = $1.08
" " present in shoe = .20 sq. ft.	cutting cost = .11
" " waste = .35 sq. ft.	$1.19

Rubber & Plastics	= .90
cutting	= .31
trimming	= .08
sole labor	= .07
	$1.36

D2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

While the leather cost shown appears excessive and the leather waste exceeds the amount claimed present in the shoe, the figures still show that rubber/plastics is the component material of chief value.

The value breakdown provided by the manfacturer covering footwear designated as stock No. 71868 and imported under entry No. 987208 is as follows:

Leather purchased = .55 sq. ft.		leather cost =	$.87
" " present in shoe = .20 sq. ft.		cutting =	.11
" " waste = .35 sq. ft.			$.98

Rubber & plastics =	$.90
cutting	.31
trimming	.08
sole labor =	.07
	$1.36

Again the leather cost and leather waste figues appear to be excessive. However, the figures still show that rubber/plastics is the component material of chief value.

The value breakdown provided by the manufacturer covering footwear designated as stock No. 73169 and imported under entry No. 986370 is as follows:

Leather purchased = 1.78 sq. ft		leather cost =	$1.25
" " present in shoe = .62 sq. ft.		cutting =	.15
" " Leather waste = 1.16 sq. ft			$1.40

Rubber/plastics =	$.85
cutting =	.18
trimming =	.14
sole labor =	.11
	$1.28

The leather waste figures here greatly exceed the maximum waste figures allowable as per our previous instructions on this matter.

D3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077303

The value breakdown provided by the manufacturer covering footwear designated as stock No. 75124 and imported under entry No. 986370 indicates that .49 square feet of leather out of a total of 1.52 square feet purchased was salvaged. According to our calculation this would reduce the leather cost to 80 cents plus 15 cents for cutting and trimming which amounts to a total cost of 95 cents for leather against a total cost of $1.18 for the rubber/plastics component.

The protestant has submitted additional cost breakdowns for the foregoing style numbers which it states were not submitted at the time of entry but later on due to CF 28's and CF 29's. These cost breakdowns purport to show that the shoes covered by the aforementioned stock numbers are in chief value of leather.

A comparison of the additional cost breakdowns with the original breakdowns are so inconsistent and contradictory that we cannot accept them. For example, the original cost breakdown on footwear covered by stock No. 75124 indicates a salvaged waste figure of 0.49 sq. ft. per pair while the latter breakdown makes no mention of salvaged waste. Also, we note in three instances the amount of leather purchased as shown by the latter cost breakdown shows a substantial increase in leather purchased over that shown on the original breakdown.

In view of the foregoing it is our position that footwear covered by the above-listed stock numbers was properly classified in liquidation under item 700.95, TSUS.

D4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

017303

With respect to the other styles of footwear involved in this protest, we have no "tangible evidence" which would permit us to categorically state that the breakdowns showing the footwear to be in chief value of leather are false. Therefore, those styles should be reliquidated under item 700.35, TSUS or item 700.45, TSUS, as applicable. However, any youth's sizes 11-1/2 to 2 should be treated as unisex and reliquidated under item 700.45, TSUS.

HOLDING:

The protest should be denied in part as to that footwear covered by stock Nos. 71360, 71868, 73169 and 75124, and allowed in part as to the other styles protested. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Re: Decision on Application for Further Review of Protest No. 2904-4-000082

This protest was filed against your decision in the liquidations of March 28, 1984, and March 30, 1984, entry Nos. 84-408852-1, dated February 21, 1984, and 84-408657-8, dated February 7, 1984, covering parts of articles called the "Talking View-Master".

FACTS:

The "Talking View-Master" is used for viewing and listening to 3-D cartridges. The cartridges consist of photographs mounted on a cardboard disk and a miniature phonograph disk, both of which are encased and mounted on a plastic covered cardboard plate. The sample submitted is a molded plastic encasement containing a pair of plastic magnifying lenses. The inserted cartridge is magnified by the enlarging lenses which the viewer looks through.

The cartridges to be used with the subject device contain various standard children's stories, i.e., "Peter Pan," Bambi," etc.

Classification of the device upon importation was under item 722.50, Tariff Schedules of the United States (TSUS), providing for parts of projectors. This classification was in

D6

error and in succeeding protests "Talking View-Master" parts were classified under item 722.55, TSUS, which provides for parts of photographic film viewers which contain an optical lens. Counsel for the importer maintains that the merchandise should be classified under item 722.56, TSUS, as parts of photographic film viewers without an optical lens. Ultimately, it was suggested that the device is classified as a toy under item 737.95, TSUS.

077305

ISSUE:

Whether the "Talking View-Master" is a photographic film viewer under item 722.55 or item 722.56, TSUS, or a toy under item 737.95, TSUS. Inasmuch as the "View-Master" does not project, classification under item 722.50, TSUS, is obviously not an issue.

LAW AND ANALYSIS:

Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, states:

> For the purposes of the tariff schedules, a "toy" is any article chiefly used for the amusement of children or adults.

An examination of the sample provided reveals that the merchandise of which the imported articles are parts is chiefly used for the amusement of children. The cartridges contain pictures of amusing cartoons. Only standard children's stories are available on the cartridges for this particular view-master. In light of the above reasons and since the device is marketed as a toy, we believe that it is chiefly used as a toy.

D1

Customs found in TD 56184(95) that miniature viewers used for a similar purpose were classifiable under the provision for toys, not specially provided for. A rather unsophisticated viewer was also classified as a toy in CIE Letter 1102/65 of August 3, 1965. The "Talking View-Master", although considered relatively more sophisticated than the above described items, should not be barred from classification as a toy. It is not unusual to now find increasingly sophisticated and technologically advanced toys. It is the amusement feature which will ultimately determine classification. The sights and sounds produced by the "View-Master" are clearly designed to amuse children even though the viewer itself does not have any patently amusing features. Even though the device could be used, we assume, to produce educational material, its chief use, it appears, would always be amusement.

Counsel for the importer makes extensive arguments that because the device is relatively unsophisticated compared to other optical equipment, it should not be included in the provision for optical lenses. However, this provision is intended to encompass all items with an optical lens, regardless of the optical precision or accuracy of the lens.

If the subject device is provided for in both the photographic film viewer and toy provisions, then Headnote 1, Subpart E, Part 5, Schedule 7, requires that the toy provision take precedence.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D8

071385

HOLDING:

Thus, the "Talking View-Master" parts are properly classifiable as other parts of toys, not specially provided for, in item 737.95, TSUS. This holding does not necessitate a determination as to whether or not the item contains an optical or non-optical lens.

The protest should be denied except to the extent reclassification as indicated above results in a partial allowance. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schefflin

For Harvey B. Fox
Director, Classification
and Value Division

Mr. Mark Bierig
Ardee Merchandise Corp.
130 Grand Street
Carlstadt, New Jersey 07072

Dear Mr. Bierig:

Your letter dated March 27, 1985, requested the tariff classification of a sewing kit in a blister retail package from Taiwan. A sample was submitted on November 27, 1985, following a conversation with a member of my staff.

The sewing kit contains the following items: scissors, tracing wheel, assorted needles, needle threader, pin cushion, box of straight pins, hem gauge, tape measure, thimble, seam ripper, marking pencil with brush eraser, and 12 spools of varicolored threads.

The issue raised by your request concerns whether the merchandise is classifiable as a sewing set in leather cases or other containers of types ordinarily sold therewith in retail sales, other in item 651.13, Tariff Schedules of the United States (TSUS).

The term "sewing set" was construed in New York Merchandise Co., Inc. v. United States, 66 Cust. Ct. 20, C.D. 4162 (1971) where the court stated:

> In our opinion the sine qua non to designation of an article of commerce as a "sewing set" is that an article which contends to be such contains, needle and thread, the essentials needed to perform the act of sewing, in addition to whatever other sewing accessories it may happen to include, i.e., scissors, thimbles, pins, tape measure, etc.

In the past, Customs required the container to be substantial or reuseable. See Headquarters Ruling Letter 072763 dated June 4, 1984. It is now our view that the requirement for a substantial or reuseable container is erroneous. Nevertheless, we note that the advertising claims on the blister package indicate that it is a reuseable container. To remove the contents, the user simply slides out the cardboard.

DIO

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

An examination of the sewing kit in question reveals that it satisfies the definition of a "sewing set" described in the New York Merchandise case, because it contains needles and thread which the court found to be essential.

Thus, the sewing set is classifiable in item 651.13, Tariff Schedules of the United States, with duty at the rate of 9.5 percent ad valorem. As a product of Taiwan, it is eligible for duty-free treatment under the Generalized System of Preferences upon compliance with all applicable regulations.

Sincerely,

Arthur P. Schifflin

Arthur P. Schifflin

District Director of Customs
Boston, Massachusetts 02109

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0401-5-000633

This protest was filed against your decisions in the liquidation on February 25, 1985, of entry No. 419716 dated September 11, 1984, and in the liquidation on March 1, 1985, of entry No. 84-419717 dated September 5, 1984, covering shipments of women's nylon aerobic shoes manufactured in Korea.

FACTS:

The women's nylon aerobic shoes, stock Nos. 64568, 64543, 64550 and 64691 were classified in liquidation under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics: other: footwear with soles which overlap the upper other than at the toe or heel: other: valued over $3.00 but not over $6.50 per pair in item 700.67, Tarif Schedules of the United States (TSUS), with duty at the rate of 90 cents per pair plus 37.5 percent ad valorem.

The protestant maintains that the sole overlaps the upper only at the heel and toe portions of the shoe. Consequently, it claims that the footwear is properly classifiable under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or

D12

plastics: other: footwear having soles (or midsoles, if any) of rubber or plastics which are affixed to the upper exclusively with an adhesive (any midsoles also being affixed exclusively to one another and to the outsole with an adhesive); valued not over $6.50 per pair in item 700.61, TSUS, and dutiable at the rate of 37.5 percent ad valorem.

ISSUE:

Does the sole of the sample shoe overlap the upper other than at the toe or heel?

LAW AND ANALYSIS:

An examination of the sample submitted indicates that the sole overlaps the upper by approximately 3/16 inch at both the front and back portions of the shoe. The overlap in the front occupies approximately 5 inches of the shoe's perimeter while the overlap in the back portion of the shoe also occupies approximately 5 inches of the shoe's perimeter.

The protestant in support of its position that the overlap of the upper is only at the heel and toe portions of the shoe states that the statute does not describe the overlap as a jogging type overlap. It merely states "toe" and "heel." The protestant further argues that the exclusionary langauge in a tariff provision must be narrowly interpreted. International Seaway Trading Corp. v. United States, 69 Cust. Ct. 144, C.D. 4385 (1972); Canadian Pac Ry Co. v. United States, 73 F.2d 831, 834 (CCPA 1934).

The principle that protestant has extracted from International Seaway, supra, has been only partially quoted. That principle fully stated is that "An exception clause in a statute must be strictly construed in accordance with the legislative purpose underlying the statute." With respect to the proper interpretation of the scope of item 700.61, TSUS, we find it quite

D13

relevant that USITC Investigation No. 332-101, dated August 1979, which is stated to be "printed for the Use of the Committee of Finance (of the United States Senate)" states at page 78 that "proposed new items 700.61, 700.62, and 700.62X are intended to cover joggers. This quote states the "legislative purpose underlying the statute" and is critical to interpreting the phrase "other than at the toe or heel."

Information before us is that the trade meaning of "toe" includes items which go much farther back in the shoe, as in a "steel toe" in safety work footwear, and items which end before the toes even begin, as in the "toe" inserted in the quick release mechanism of a ski binding. We have found only one use of the phrase "at the toe" in our trade reference. That is on page 247 of the "Manual of Shoemaking." The photo on page 249 makes it clear that, in that context, "at the toe" means only a vertical line about 1/100 inch wide at the front tip of the shoe. It is improbable that such an extremely restrictive definition would have been intended by Congress but such a use by the trade indicates that it is unlikely the trade would also apply the phrase "at the toe" to a five inch long toe bumper present on the instant footwear and also indicates that the phrase "at the toe" has no one trade meaning. A review of dictionaries also indicates that there is not one clear common meaning for "at the toe."

In view of the expressed legislative intent that items 700.61-700.63, TSUS, cover primarily joggers, it is our opinion that "at the toe" means the small area of the toe covered by the flat sole of a cemented jogger where it overlaps the upper.

CIE3LO

D14

HOLDING:

The women's nylon aerobic shoes were properly classified under item 700.67, TSUS. The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schuffler

CLA-2 CO:R:CV:G
077329 TLL

John N. Politis, Esq.
Barnes, Richardson and Colburn
Equitable Plaza, Suite 2012
3435 Wilshire Boulevard
Los Angeles, California 90010

Dear Mr. Politis:

Your letter dated April 24, 1985, submitted on behalf of your client Nutritional Products International, Inc., requesting a tariff classification ruling on a dried dairy product in powder form was forwarded to this office for response. No samples were furnished with your inquiry.

You state in your letter that the product to be imported, which you call a yogurt mix, is manufactured as follows:

1. Non-fat milk is fermented with lactic yogurt bacteria, producing yogurt.

2. Citric acid is added to the yogurt, imparting a high acidity to the mixture.

3. The mixture of yogurt and citric acid is dehydrated into powder form.

4. Guar gums, starches, gelatin, authorized flavors, and authorized color are added and blended with the dry yogurt powder.

5. The powder is bulk packed for export to the United States.

The product, as imported, consists by weight of 53 percent yogurt (64 percent by value), 14 percent citric acid, and 33 percent guar gums, starches, gelatin, flavors and colors. After importation into the United States, the product will be mixed with sugar and then packaged for retail sale. The ultimate purchaser of the product will blend the mixture with milk to produce a yogurt drink or a soft frozen yogurt dessert.

The issue presented by your letter is whether this product is classifiable under the provision for yogurt and other fermented milk in item 118.10, Tariff Schedules of the United States (TSUS), or under the provision for malted milk; and articles not specially provided for, of milk or cream in item 118.30, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E2

In support of your contention that this product should be classified as a yogurt under item 118.10, TSUS, you cite Headquarters Ruling Letter (HRL) 012285 dated June 11, 1971, and Western Dairy Products, Inc. v. United States, 72 Cust. Ct. 75 (1974).

HRL 012285 held certain sterile fruit yogurt in cans to be classified under item 118.10, TSUS. The Western case held Savortex Calcium Reduced Dried Skim Milk (CRDSM) to be classifiable under the provision for articles not specially provided for of milk under item 118.30, TSUS. In so holding, the court pointed out the difference between CRDSM and whey and yogurt which are specifically listed in the tariff schedules. We do not find these precedents cited as being controlling in determining whether the imported product is a yogurt.

The applicable Food and Drug Administration regulation, 21 CFR 131.200, defines yogurt as:

> the food produced by culturing one or more of the optional dairy ingredients specified in paragraph (c) of this section with a characterizing bacterial culture that contains the lactic acid-producing bacteria, Lactobacillus bulgaricus and Streptococcus thermophilus. One or more of the other optional ingredients specified in paragraph (b) and (d) of this section may also be added. When one or more of the ingredients specified in paragraph (d)(1) "(nonfat milk solids)" of this section are used, they shall be included in the culturing process. All ingredients used are safe and suitable. Yogurt, before the addition of bulky flavors, contains not less than 3.25 percent milkfat and not less than 8.25 percent milk solids not fat, and has a titratable acidity of not less than 0.9 percent, expressed as lactic acid. The food may be homogenized and shall be pasteurized prior to the addition of the bacterial culture. Flavoring ingredients may be added after pasteurization or ultrapasteurization. To extend the shelf life of the food, yogurt may be heat treated after culturing is completed, to destroy viable microorganisms.

While Customs is not required to follow the FDA definition of yogurt, it is our position that that definition accurately reflects the common and commercial meaning of what is or may be a yogurt. Products must meet this definition of a yogurt in order to be sold as a yogurt. This is in accord with the fundamental theory of Customs jurisprudence that an imported article should be classified according to its true commercial character. Computime, Inc., v. United States, Appeal No. 85-1050, appearing on page 27 of the October 2, 1985, Customs Bulletin.

077329

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E3

As indicated in the above description of the product, yogurt is a fermented milk of the lactic acid type. The lactic acid in the product is produced by the growth and activity of specific acid producing cultures which, in the fermentation process, generally cause the breakdown of lactose to lactic acid. The two strains of lactic acid producing bacteria (Lactobacillus bulgaricus and Streptococcus thermophilus) develop the typical flavor and acid taste which is peculiar to yogurt.

In describing the manufacture of the mixture under consideration, you state that "citric acid is added to yogurt, imparting a high acidity to the mixture." This citric acid is added in a substantial quantity (citric acid comprises 15 percent by weight of the final mixture) and the presence of this ingredient in this quantity is atypical of yogurt either as described above in the Federal Regulations or as described in other technical references. See Cheese and Fermented Milk Foods by Frank Kosikowski (copyright 1977) 2nd edition, pages 73-75, 82-87, and Modern Dairy Products by Lincoln M. Lampert (copyright 1975) 3rd edition, pages 227-229.

077329

Based on the information provided, it appears that the natural fermentation of the milk, begun by culturing the milk with lactic acid-producing bacteria, was at some point in the manufacturing process supplanted by the direct acidification of the milk with citric acid to achieve the required acidity level. The resultant product, accordingly, would not be considered milk which has been fermented into yogurt by the fermenting activity of lactic acid-producing bacteria, since the final "yogurt" is apparently obtained by both bacterial fermentation and direct acidification. Nor could the titratable acidity of this product be expressed as lactic acid, since a substantial amount of citric acid was also added to the product.

It is noted, finally, that the instant product will not be sold for use as a yogurt. The imported mixture, with added sugar, will ultimately be reconstituted with unfermented milk to make various milk based flavored dairy products.

Based on the foregoing analysis, we find that the yogurt component of the product at issue was not produced solely by fermentation with yogurt bacteria, but by fermentation combined with direct acidification with a substantial amount of citric acid. This product would not be considered yogurt under the standards for "yogurt" established by the Food and Drug Administration nor under the manufacturing procedures followed by commercial yogurt makers in the United States. For these reasons, the product would not be considered "yogurt and other fermented milk" as provided for in item 118.10, TSUS.

Further, such conclusion is consistent with a number of Headquarters precedents. ORR Ruling 73 0219 of November 19, 1973, classified a mixture consisting of 74 percent spray dried yogurt powder and 25.5 percent cocoa butter (assuming the value of the cocoa butter to be higher than the value of the yogurt powder) under the provision for other edible preparations not

E4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

specially provided for in item 182.95, TSUS. This product was not considered, apparently, to be a form of yogurt, as provided for in item 118.10, TSUS, nor an article not specially provided for, in chief value of milk or cream, in item 118.30, TSUS, since the value of the cocoa butter was believed to be higher than that of the yogurt powder.

Headquarters letter of July 23, 1973 (file number 452.53, 028813) classified a freeze dried or spray dried yogurt under the provision for articles not specially provided for, of milk or cream, in item 118.30, TSUS. Headquarters stated "that the spray dried products do not constitute yogurt within the common meaning of the term."

Headquarters letter of April 30, 1973 (file number 452.513 KW, 023602) classified two spray dried yogurt powders under the provision for other articles not specially provided for, of milk or cream, in item 118.30, TSUS. It was held in this ruling that spray dried yogurts did not constitute yogurt within the common meaning of the term.

Based on the preceding analysis and on prior administrative rulings on somewhat similar products, this mixture of "yogurt" and citric acid, dried and then combined with other ingredients is not "yogurt" as provided for in item 118.10, TSUS, but a "yogurt" flavored dairy base for beverages and frozen desserts. Since the product is in chief value of its milk ingredients, it would be classifiable under the provision for articles not specially provided for, of milk or cream in item 118.30, TSUS.

Articles classified in item 118.30, TSUS, are subject to quota quantity restrictions listed in item 950.11 in Part 3, Appendix to the Tariff Schedules. Total import quantities allocated under item 950.11 are 6,000 pounds per calendar year. Additionally, an import license, issued to the importer by the U.S. Department of Agriculture, would be required at the time of entry of such merchandise. Applications for an import quota license for this merchandise may be obtained from the U.S. Department of Agriculture at the following address:

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3001-3-000421

This protest was filed against your decisions in the liquidations on July 15, 1983, of the following entries:

Entry Number	Entry Date
778770	1-31-82
778845	2-04-82
779214	2-04-82
781598	7-08-82
782099	8-04-82
782426	8-19-82
782505	8-17-82
985207	11-10-82
985313	11-16-82
986831	2-14-83
987530	3-28-83

FACTS:

The fabric/leather/rubber/plastic joggers and sport shoes manufactured in Korea were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear involved is in chief value of leather and is therefore classifiable as leather footwear under item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

We note that this protest applies to 30 invoices in 11 entries according to protestant's "Exhibit A." Your CF 645 dated November 2, 1983,

E6

RELEASED TO THE

refers only to the 5742 pairs of stock No. 75123 on invoice 4 of CE 82-778770. It is assumed that you intended that invoice to be representative of all 30 invoices.

ISSUE:

(1) Does the documentation provided by the protestant show that the footwear is in chief value of leather?

(2) Is Customs required to accept the cost breakdown submitted by the protestant?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous; or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that importer submitted data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

With respect to stock No. 75123, we agree that the amount of leather claimed by the maker to be present in the shoe is not realistic. The amount of 1.40 square feet of leather per pair is far more than the Customs Laboratory has ever found on any other oxford height athletic shoe. However, we do not consider that fact to be the type of "tangible evidence" which would permit us to categorically state that the information provided by the protestant as to component material of chief value is false.

RECEIVED TO THE

077339

E7

Also, we note that stock No. 75123 is apparently a vulcanized sneaker rather than a cemented jogger. Among athletic footwear with leather overlays, vulcanized sneakers are much more likely to be in chief value of leather than cemented joggers.

HOLDING:

The footwear in issue is classifiable as claimed by the protestant. The protest should be allowed. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P Schaffner

4 MAR 1986

Mr. Leon Fetkowitz
Kaymont Chemical Corporation
142-05 Roosevelt Ave.
P.O. Box 1636
Flushing, New York 11354

Dear Mr. Fetkowitz:

Your letter of November 18, 1985, concerns the dutiable status of nitrocellulose resins packed in denatured ethanol, a product of Brazil.

The nitrocellulose would be packed in 28 percent wetted echanol, which has been denatured with 2 percent toluene. The product is to be used solely for industrial applications, such as the manufacture of lacquers, adhesives or varnishes. None of the ethanol, you emphasize, will be used for fuel purposes. In fact, you note that you are prepared to maintain detailed records and sign affidavits or certificates that all of the imported material went for industrial purposes and none was used for fuel purposes. You add that your customers or distributors would also execute such certificates.

In view of the provisions relating to commingled merchandise in General Headnote 7, TSUS, the imported merchandise would be separately dutiable. The nitrocellulose resins would be dutiable under the provision for cellulosic resins in item 445.25, TSUS. The rate of duty is 5.6 percent ad valorem. Products of Brazil classifiable under item 445.25, TSUS, are entitled to duty free status under the Generalized System of Preferences, if all the requirements are met. Ethanol is classifiable under item 427.88, TSUS, dutiable at the rate of 3 percent ad valorem. Declarations executed both by the end users as well as the importer to the effect that the ethanol will not be used for fuel purposes will be required. If such declarations are not received, the ethanol would be subject to an additional duty of 60 cents per gallon.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Jack Heath
Director of Operations
Savoy Leather Manufacturing Corporation
Ward Hill Industrial Park
Post Office Box 287
Haverhill, Massachusetts 01830-0487

Dear Mr. Heath:

This is in response to your letter of November 18, 1985, regarding the tariff classification of an unfinished audio and video cassette storage unit, style 1412, from Taiwan and Hong Kong.

A sample was submitted of a finished and an unfinished case. The unfinished portion is a product of Taiwan.

You advised the National Import Specialist that the main body of the case would be fabricated in Taiwan of die cut sections of vinyl leatherette, foam and cardboard which are manufactured into various panels by a process of gluing and stitching with PVC binding. The panels are joined by the stitched PVC binding. The exterior surface has an ornamental stitch applied. You indicated that foreign labor represents approximately 90 percent of the total labor and that all the materials whether assembled abroad or in the United States are of foreign origin. The 10 percent labor performed in the United States consists of affixing four rivets, crimping the tuck lock and handle in place, and inserting the molded tray.

You also advised the National Import Specialist that it would not be cost efficient to perform any other labor in the United States or to incorporate significant United States materials.

The finished item is a carrying case designed to hold 12 audio cassettes. The case is designed so that the user may transport cassettes from one place to another. The case is an attache-like design manufactured of padded leatherette vinyl. The interior is fitted with a molded plastic tray having 12 sections. The top flap is secured by a tuck lock and the case is carried by a molded plastic carry handle which is affixed to the top. When sold at retail the item is packaged in plastic shrink-wrap with a paper advertisement insert indicating it is a "12 Cassette Carrier."

E10

RELEASED TO THE

It is your position that the unfinished case, as imported, consists of parts and should be classified under the provision for articles of rubber or plastic, not specially provided for in item 774.55, Tariff Schedules of the United States (TSUS).

The issues involved are whether the imported article is an unfinished audio and video cassette storage unit, and, if so, whether it is classified as luggage.

General Interpretative Rule 10(h), TSUS, provides unless the context requires otherwise, a tariff description for an article covers such article, whether assembled or not assembled, and whether finished or not finished.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(ii), TSUS, provides that "the term '<u>luggage</u>' covers brief cases, portfolios, school bags, photographic equipment bags, golf bags, camera cases, binocular cases, gun cases, occupational luggage cases (physicians', sample, etc.), and like containers and cases designed to be carried with the person." The finished audio cassette carrying case is a container designed to hold specific items, audio cassette tapes, and designed to be carried with the person. Therefore, the finished audio and video cassette case is properly classified within the definition of the term luggage.

The article in its condition as imported has been sufficiently processed so as to be classified as luggage. The minimal labor performed in the United States by adding various fittings and packaging for retail would not adversely affect the classification of the case as unfinished luggage.

Accordingly, the unfinished audio and video cassette case is classifiable under the provision for luggage, of other material, other in item 706.6245, TSUS, and dutiable at the rate of 20 percent ad valorem.

Sincerely,

Arthur P. Schaffner

Mr. J. J. Eroncig
Peninsula Corp.
3939 N.W. 25th Sreet
Miami, Florida 33142

Dear Mr. Eroncig:

This is in reference to your inquiry of October 15, 1985, concerning the dutiable status of a mixture of gasoline and alcohol. It is assumed that by "alcohol" you mean ethanol.

You state that the gasoline would be produced in Jamaica and blended with ethanol, imported into Jamaica from Brazil, to produce a mixture of 50 percent gasoline and 50 percent ethanol.

The mixture would not qualify for duty-free status under the Caribbean Basin Economic Recovery Act (CBERA). According to 19 USC 2703(a)(2) of the CBERA and section 10.195, Customs Regulations, a simple combining or packaging operation in a beneficiary country is not sufficient to make an article eligible for duty-free treatment under the CBERA even though the total processing operations in the beneficiary country cause the article to meet the value requirement of the CBERA. An article made from a simple combining or packaging operation would not qualify for duty-free status even though one of the components of the article is a product grown, produced or manufactured in a beneficiary country.

Section 10.195(a)(2), Customs Regulations, states that the blending of foreign and beneficiary country tobacco is an example of an operation that would be considered a simple combining. The mixture made from such a blending operation, even though one of the components is a product of a beneficiary country, therefore, would not qualify for duty-free status under the CBERA as a product grown, produced or manufactured in a beneficiary country. Following this example, the blending of foreign ethanol and beneficiary country gasoline would be considered a simple combining operation and the mixture that is made from this operation would not qualify for duty-free status under the CBERA as a product of a beneficiary country.

RELEASED TO THE

E12

A mixture of 50 percent gasoline and 50 percent ethanol is classifiable under the provision for mixtures not specially provided for in item 432.10, TSUS. The rate of duty would be the highest rate applicable to any component of the mixture, which in this case would be ethanol in item 427.88/901.50 at 3 percent ad valorem plus 60 cents per gallon.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. D.P. Phillips
Vice President, International
Klein Tools, Inc.
7200 McCormick Boulevard
Chicago, Illinois 60645

Dear Mr. Phillips:

Your letter of May 1, 1985, requests reconsideration of New York ruling letter 812494 which held that unassembled slip-joint plier forging halves from Japan, when imported in equal numbers in the same shipment, are classifiable as slip-joint pliers, other, under the provisions of item 648.82, Tariff Schedules of the United States (TSUS), dutiable at the 1986 rate of 13 percent ad valorem. You take issue with the statement made in the New York letter that the finishing process done in the United States and the probable joining of the plier halves by a nut and bolt fastener neither adds substantial value to them nor changes their character.

Your request for reconsideration lists, among others, the following processing steps which are performed on the forgings in the United States: 1) coining; 2) punching the plier slot; 3) machining the ribs; 4) broaching; 5) grinding; 6) heat treating; 7) induction hardening; 8) additional grinding; 9) polishing, assembly and packing. You include a copy of Headquarters Ruling Letter dated May 2, 1985 (Control No. 727439), which held that the processing described above transformed these forgings so as to make them a product of the United States. Because of this extensive processing, you claim that the forgings are more properly classifiable as parts of pliers under the provisions of item 648.89, TSUS, dutiable at the 1986 rate of 6.2 percent ad valorem.

As noted in the New York ruling letter, General Headnote 10(h), TSUS, provides that "unless the context requires otherwise, a tariff description for an article covers such article, whether assembled or not assembled, and whether finished or not finished." This Headnote does not apply when material of substantial value is added which also changes the character of the article. I.A. 187-75.

E14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The processing performed subsequent to importation does not change the basic character of the forgings. By virtue of their configuration at the time of importation, the forgings solely are dedicated to use as pliers. The imported articles possess the elementary form and substance of slip joint pliers and are unsuitable commercially for any other use. See Redden & Martin v. United States, 5 CCA 485 (1915), where unfinished scissor blade forgings which underwent numerous finishing operations in the United States were held to be classifiable as unfinished scissors rather than as forgings of iron or steel.

Accordingly, we are of the view that Headnote 10(h) is applicable in this instance. Unassembled and unfinished plier forgings, when imported in equal numbers in the same shipment, are still classifiable as pliers.

Headnote 10(ij), TSUS, provides that "a provision for 'parts' of an article covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such article." The subject plier forgings are not imported as parts, but rather are imported in equal numbers to be finished and assembled into a final, complete article. Accordingly, a classification of such forgings as parts cannot prevail over the specific provision for slip-joint pliers.

The unfinished unassembled plier forgings, when imported in equal numbers in the same shipment, are properly classifiable as slip joint pliers, under the provisions of item 648.82, TSUS, dutiable at the rate of 13 percent ad valorem. New York ruling letter 812494 is hereby affirmed.

Sincerely,

Arthur P. Schaffner

Mr. John Mack
Phillips Cables Limited
King Street West
Brockville, Ontario K6V 5W4
Canada

Dear Mr. Mack:

In your letter of October 2, 1985, reference C1-C6.8, you inquire as to the tariff classification of an all-dielectric optical cable from Canada. Samples and literature were submitted.

The literature depicts a cable, shipped in standard lengths of 100 meters, composed of a central non-metallic core member covered by thermoplastic rubber insulation. A number of buffer tubes each containing optical fibers of graded index glass and filled with moisture resistant compound covered by a core wrap, surround the core. A black polyethylene jacket encases the product. These cables are designed for high speed voice, data and video communications.

You note that a ruling from the Area Director of Customs, New York Seaport, dated February 2, 1984 (808204), classified a somewhat similar article under the provision for other electrical apparatus for making or breaking electrical circuits, for the protection of electrical circuits ...in item 685.90, Tariff Schedules of the United States (TSUS). The merchandise the subject of that ruling, however, was essentially a static wire consisting of a steel aluminum exterior and a fiber optic core. Related literature indicated the article's principle feature was as a ground wire or lightening arrester designed to protect the fiber optics. This description no doubt influenced Customs decision to classify the article in item 685.90.

For Customs purposes, merchandise is classified according to its primary design and function. Because the article presently under consideration clearly functions primarily as an optical fiber transmission cable, its function as a ground wire being clearly subordinate, it is classifiable under the provision for optical fibers, whether or not in bundles, cables or otherwise put up, with or without connectors and whether mounted or not mounted, in item 707.90, TSUS, dutiable at the rate of 10 percent ad valorem.

SUBJECT: Internal Advice Request No. 72/85 Concerning the Tariff Classification of Crib Mobile Toy Figures Manufactured in Taiwan

FACTS:

The merchandise involved consists of four plastic parts which after importation are used in connection with a child's crib mobile. These plastic parts are imported in bagged assortments of four and are intended to portray a dog, a horse, a bunny, and a lamb. Each shape is basically two dimensional and measures approximately 5 inches by 5 inches. The depth of each shape is approximately 1/4 inch. Each shape is made of vinyl with a flat strip of styrofoam "sandwiched" between two layers of vinyl. The front portion and back portion of each shape are of different colors. The front portion has animal features painted on it while the back portion does not. Each shape also has two holes in the upper torso into which a vinyl hanging strip is to be inserted. Each is in a running configuration with only one front and one rear leg visible. None of the shapes is free standing or realistically colored.

THIS MAY BE RELEASED TO THE PUBLIC

F3

The inquirer maintains that the merchandise is classifiable under the provision for other toy figures of animate objects: not having a spring mechanism: not stuffed in item 737.40, Tariff Schedules of the United States (TSUS).

It is your position that the merchandise is classifiable under the provision for other toys, not specially provided for in item 737.95, TSUS.

ISSUE:

Do the subject parts constitute "toy figures of animate objects" for tariff purposes?

LAW AND ANALYSIS:

The inquirer argues that the parts involved in this request are in forms and configurations which represent full bodied known living animals such as a horse, a lamb, a bunny and a dog. For this reason these parts are animate objects for the purpose of classification under item 737.40, TSUS.

In the case of Louis Marx & Co., Inc. v. United States, 66 Cust. Ct. 139, C.D. 4183 (1971), the court stated that "'figures of animate objects' must be read to mean forms or representations of humans or animals." It is our view that a proper interpretation of the phrase "forms or representations" has reference to a reproduction of the appearance of an animate object as a clearly defined configuration in three dimensional form. The samples are only shapes or silhouettes of particular characters rather than being multi-dimensional, full bodied representations of animate objects. This insufficient portrayal or likeness is reinforced by the one-sided coloration and pattern of the mobile shapes.

It is not sufficient to assert as the inquirer does that "the toys in this request... represent full bodied known living animals..." or that "such toy is clearly shaped to represent an animal with a full body and various physical features." What is needed is that the toy article itself

MAY BE RELEASED TO THE PUBLIC

687149

F4

incorporate the full-body character and that it be configured and detailed to some reasonable degree to depict the overall physical features of the animal it seeks to represent.

HOLDING:

The sample animal shapes, although designed to amuse infants by their appearance, lack a configuration which would allow classification as toy figures of animate objects: not having a spring mechanism: not stuffed in item 737.40, TSUS.

It is our position that the merchandise is classifiable under the provision for other toys, not specially provided for in item 737.95, TSUS. You should inform the inquirer of this ruling.

077396 JAS

077396

District Director of Customs
Patrick V. McNamara Bldg.
477 Michigan Avenue
Detroit, Michigan 48226-2568

Dear Sir:

This is our decision on Application for Further Review of Protest No. 3801-5-001845, dated May 3, 1985. At issue is consumption entry 85273915, dated October 19, 1984, liquidated April 5, 1985. The subject of this protest is the MS300LD industrial laser from the UK.

FACTS:

The subject unit is a high power (100-500 watt) industrial laser. The unit includes the laser head, a power supply which is a free standing cabinet on casters, connected to the laser head by flexible conduit, a cooling unit mounted in a separate cabinet, CNC display, keyboard, TV monitor, work chamber, and binocular viewing. The unit is designed to weld, cut, and drill metals, ceramics, silicon, carbides, diamonds, and other materials found suitable for laser processing.

The laser pulse energy level and duration is programmed into the unit depending on the nature of the work piece to be processed, and whether it is to be drilled, cut or welded. Pulse durations of two milliseconds or less are used for drilling and cutting operations, while durations of 1-20 milliseconds are used for welding tasks, laser soldering and brazing applications.

Because of submitted literature indicating that industrial lasers, as a general class or kind, are designed to machine or work on a variety of materials, protestant maintains that the proper classification is under the provision for other machine tools, in item 674.42, Tariff Schedules of the United States (TSUS). Because such high power units as the MS300LD are

F6

used only to work metal, the subject entry was liquidated under the provision for metal-working machine tools, in item 674.35, TSUS. Information obtained from a domestic manufacturer of similar laser equipment indicates that units of this type are chiefly used to drill metal, (over 60 percent of all applications), with cutting and welding constituting the remaining applications.

ISSUES:

(1) Is there evidence sufficient to support classification as a metal-working machine tool as opposed to an "other" machine tool, and (2) if a metal working machine tool, is the subject unit specifically classifiable in item 674.33 as a "drilling" machine tool?

LAW AND ANALYSIS:

With respect to issue (1), statements in the promotional literature as to the variety of materials industrial lasers are designed to work are general in nature. More specific statements in the literature with respect to the high power lasers like the MS300LD indicate it is used to work a variety of metals. This "working" includes drilling, cutting, welding, soldering, and brazing. Those persons concerned with selling, distributing, and promoting a particular article have every incentive to know its uses, and their opinions are extremely relevant to the issue of chief use. See Davis Products, Inc. et al v. United States, 59 Cust. Ct. 226, C.D. 3127 (1967), Novelty Import Corp., Inc. v. United States, 60 Cust. Ct. 574, C.D. 3462, 285 F. Supp. 160 (1968), and related cases. From the submitted literature, and the referenced oral advice received from a domestic manufacturer of similar units, we conclude that the subject unit belongs to that class or kind of machine tool chiefly used to work metal.

968440

With respect to issue (2), that is, whether "drilling" as a form of metal working would require classification of the MS300LD in item 674.33, it is our opinion that a laser is not considered the type of "drilling" machine encompassed by item 674.33. The common meaning of the term "drilling," encompasses a motor-driven device fitted with an end cutting tool that is rotated with sufficient power either to create a hole or to enlarge an existing hole in solid material. It is therefore apparent that the subject laser does not "drill" for tariff purposes. See discussion in Giddings & Lewis Machine Tool Co. et al v. United States, 61 Cust. Ct. 284, C.D. 3612 (1968). There is no issue as to whether the subject unit is a "machine" for tariff purposes, or that it "works" metal. Note Schedule 6, Part 4, Subpart F, Headnote 1(a).

HOLDING:

The subject unit is a machine tool which is chiefly used to work metal, but is not specifically provided for as a drilling machine. The correct classification is in item 674.35, TSUS, as a metal-working machine tool.

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action, to satisfy the notice requirements of section 174.30(a), Customs Regulations.

Sincerely,

Arthur P. Schaffner

Re: Internal Advice 54/85; Classification of Rollers for Printing Presses

Dear Sir:

This internal advice involves the classification of rubber rollers used in offset lithography printing presses. The rollers are comprised of metal spindle cores which have synthetic rubber covers. Rollers with worn out or damaged rubber are received by Harrigan Roller Company of Baltimore, Maryland, who strips the rubber and exports the bare spindles to West Germany or the United Kingdom. New rubber coverings are applied abroad, and Harrigan reimports the finished rubber rollers.

The rollers are currently classified as other parts of printing machinery under item 668.50, Tariff Schedules of the United States (TSUS), dutiable at the rate applicable to the printing machinery of which they are parts. Inasmuch as the rollers are parts of printing machinery, other, classifiable under item 668.23, TSUS, they are dutiable at the rate of 3.6 percent ad valorem.

A question has been raised as to whether the rollers are more properly classifiable as print rollers, used for printing, stamping or cutting designs, other, under item 668.34, TSUS, dutiable at the rate of 9.5 percent ad valorem. Harrigan Roller Company has requested a binding ruling on the classification of the rollers. Because importations of the finished products are ongoing, a binding ruling governing a prospective transaction cannot be issued; however, the Internal Advice procedure is correctly being employed to decide the proper classification.

The subject rollers ink and dampen printing plates in the offset lithographic printing process. The print image areas on the printing plate are grease receptive and water repellent. The non-print areas are water receptive and grease

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

59

repellent. The printing plates are mounted on plate cylinders which come into contact with the subject rollers. The rubber rollers transfer ink or dampening solution to the plate cylinder. The plate cylinder then transfers the images to a blanket cylinder which deposits the ink on paper which is passed around a transfer cylinder.

The plain language of item 668.34, TSUS, requires that print rollers classified thereunder be used for printing, stamping or cutting designs. Customs Ruling Letter dated September 25, 1968, (Control No. TC 426.221) found unengraved rollers to be classifiable under item 668.50, TSUS, while engraved rollers were classified under item 668.34, TSUS. In ORR 457-69, rollers which merely fed ink on to rubber types which in turn printed on cartons or packages were classified under item 668.50, TSUS. The ruling noted that the rollers "do not correspond to print rollers enumerated in item 668.34."

Offset printing plates were held to be classifiable under item 668.50 rather than as plates engraved or otherwise prepared for printing under item 668.38 because, contrary to the plain language of the statute, they were not engraved or otherwise prepared for printing in their condition as imported. See Customs Ruling Letter dated April 23. 1979, (Control No. 062155). See also, ORR 175-69.

The subject rollers service the plate cylinder and are unimaged. In accordance with noted precedent, they are classifiable as other parts of printing machinery under item 668.50, TSUS, dutiable at the rate of 3.6 percent ad valorem which is applicable to parts of printing machinery, other, as provided by item 668.23, TSUS.

The rollers imported with new rubber covers may be entered under item 806.20, TSUS, upon compliance with section 10.8, Customs Regulations (19 CFR 10.8). Duty would be assessed on the cost or value of the foreign repairs. Unlike entry under item 807.00, TSUS, no proof that the metal roller spindles sent abroad were of United States origin would be necessary. Registration on a CF 4455 may now be waived upon satisfactory proof that the imported rollers are the same articles that were exported for repairs.

Sincerely,

Arthur P. Scherffius

Roberto S. Bianchi
President
RoEL International, Corporation
6250 Westpark, Suite 110
P.O. Box 271707
Houston, Texas 77277

Dear Mr. Bianchi:

Your letter dated October 22, 1985, addressed to our New York office, regarding the classification of an ear piercer device, which is a product of Switzerland has been referred to our office for direct reply to you.

The ear piercing device, marketed as "Sterisept", consists of a clear plastic instrument pre-loaded with an ear stud and clutch. The ear studs are made of surgical steel, either plain or electro-plated with inert, nontoxic 24 karat gold. The picture of the item you submitted with your letter shows that the studs may contain precious or semiprecious stones.

The issue presented by your request is whether the plastic instrument and ear stud is classifiable as an entirety or whether the merchandise should be separately classified.

Customs has previously issued Ruling 072133, dated April 19, 1983, which classified medi-studs, temporary training studs used to pierce the earlobes, under item 740.38, TSUS, which provides for jewelry and other articles of personal adornment.

Applying the criteria set forth in Ruling 072133, the ear stud and clutch which comprise part of the "Sterisept" kit are classifiable as jewelry and other articles of personal adornment under item 740.38, TSUS. The pre-loaded disposable ear piercing instrument, the remaining part of the "Sterisept" kit, shall be separately classified as an article of plastic, not specially provided for, in item 774.55, TSUS.

MAY BE RELEASED TO THE

F11

The ear stud and clutch classified under item 740.38, TSUS, is dutiable at the rate of 13.1 percent *ad valorem*. The plastic disposable instrument classified under item 774.55, TSUS, is dutiable at the rate of 5.7 percent *ad valorem*.

Sincerely,

Arthur P. Scheffler

Mr. Gary Fultheim
110 E. 9th Street
Suite C1110
Los Angeles, California 90079

Dear Mr. Fultheim:

In a letter dated October 17, 1985, you inquired about the appropriate tariff classification and textile category of two woven camisoles. Sample garments accompanied your request.

The submitted samples, styles 5401 and 51202 are camisole style garments manufactured from 100 percent cotton and 100 percent rayon woven fabrics, respectively. Each garment extends straight across the bustline with shoulder straps that measure approximately 1/4 inch, and features an embroidered design and a full front opening. The opening is secured by buttons on style 5401 and by ties on style 51202. The embroidery is considered to ornament the garment for tariff purposes.

We agree with your conclusion but not your rationale that the garments are not blouses. It is our view, which is supported by lexicographic authorities, that a garment must have a neckline in order to be classified as a blouse. These camisole garments which extend straight across the bustline with narrow shoulder straps do not have necklines.

Thus, the garments are classifiable under the provision for other women's wearing apparel, ornamented, of cotton, not knit, other in item 384.0996, dutiable at the rate of 20 percent ad valorem, in category 359, or if in chief value of man-made fibers in item 384.2697, TSUS, dutiable at the rate of 28.3 percent ad valorem, in category 659.

RELEASED TO THE PUBLIC

F13

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Cutoms office prior to the importation of this merchandise to determine its current status.

Ms. M. B. Zaretsky
Rio Imports Inc.
2701 West Howard Street
Suite 102
Chicago, Illinois 60645

Dear Ms. Zaretsky:

Your letter of November 7, 1985, concerns the dutiable status of solidified ethanol from Brazil.

IMCO Solified Ethanol is said to consist of 95 percent ethanol, 4 percent vegetable cellulose and 1 percent Prolamine protein. The product is intended to be used to warm foods and in non-vented heaters.

The fuel, a jelly-like or soapy mass, is generally marketed in cans for use in small stoves or chafing dishes. The addition of solidifying or gelling agents is considered to make the fuel easier to handle and somewhat safer to use.

Solidified alcohol of the composition given above is classifiable as a mixture not specially provided for in item 432.25, TSUS. The rate of duty is 5 percent ad valorem, but not less than the highest rate applicable to any component material. The applicable rate of duty is for ethanol in items 427.88/901.50, TSUS, of 3 percent ad valorem plus 60 cents per gallon.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

CLA-2 CO:R:CV:G
077469 DW

077469

Mr. James Tang
Hecny Brokerage Services, Inc.
10804 S. La Cienega Blvd.
Inglewood, California 90304

Dear Mr. Tang:

Your letter dated December 9, 1985, requested the tariff classification of a garment that is a product of Macau. A sample was submitted along with your request.

The sample garment manufactured from a fabric that is a blend of 65 percent polyester and 35 percent cotton has a full front opening secured by eight buttons, pointed collar inserted in a collarband, long sleeves with two button adjustable cuffs, single breast patch pocket, a deep tailed bottom that is longer in the back, and an unattached fabric tie belt.

It is our view that the subject merchandise is not considered to be a nightshirt for tariff purposes. We have determined that the garment is classifiable as a shirt, because it is designed to be worn as outerwear. With its deep tails, the garment is too revealing to be worn without slacks, shorts, or a skirt. Then too, the unattached tie belt made from the same fabric as the garment is characteristic of a shirt, rather than nightwear.

Thus, the shirt is classifiable in item 384.9115, Tariff Schedules of the United States Annotated (TSUSA), under textile category 641, and dutiable at the rate of 18 cents per pound plus 27.5 percent ad valorem. The flimsy fabric belt is not considered to be a separate garment for tariff purposes. It is classifiable as an entirety with the shirt.

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

We have learned that the sample garment is the subject of a pending transaction at the port of Los Angeles. In the future, please use the Internal Advice procedure set out in section 177.11, Customs Regulations.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Laura Cobb
Assistant Buyer
ERO Industries, Inc.
5940 W. Touhy Avenue
Chicago, Illinois 60648

Dear Ms. Cobb:

In a letter dated December 12, 1986, you inquired as to the dutiable status of a miniature bed tent which we assume is the product of a country entitled to the column 1 rates of duty. A sample was submitted for examination.

Our New York office issued a ruling dated February 6, 1985 (file No. 812243) holding that bed tents are properly classifiable under the provision for other toys, not specially provided for in item 737.95, Tariff Schedules of the United States (TSUS). You ask that this ruling be amended because the miniature bed tents which you have imported are display items rather than toys.

The sample miniature bed tent which you have submitted is distinguishable from the tent which was the subject of the cited ruling. That ruling which was issued to another firm involved a play tent designed to be set up on a child's mattress to create a play environment on the bed. Those bed tents are chiefly used for the amusement of children and are considered toys for tariff purposes.

The product submitted by your firm is not a bed tent, but a miniature version of a bed tent, used for display purposes only. It measures approximately 19 inches by 8 inches high and is used by sales personnel to demonstrate what the actual bed tent looks like. Due to its small size it eliminates the problem of space needed to set up the actual size tents. It is made of nylon and has plastic poles. The sample has a zippered front opening with velcro tabs to hold the flaps open. There are two mesh ventilation panels on top of the tent.

It is our position that the miniature bed tent is classifiable under the provision for other articles not specially provided for, of textile materials, not ornamented, of man-made fibers in item 389.6270, TSUS, and dutiable at the rate of 4 cents per pound plus 10 percent ad valorem.

Sincerely,

Harvey B. Fox

Re: Decision on Request for Internal Advice Concerning the Classification of Certain Mine Arch Support Units

Dear Sir:

In your memorandum of January 8, 1986, you requested advice on the classification of certain mine arch support units. This request was in response to a request by counsel, dated November 22, 1985, as supplemented by letters of November 26 and December 18, 1985, with attachments, on behalf of the importer, for a ruling under the provisions for internal advice in sections 177.1(c) and 177.11(b)(3) of the Customs Regulations (19 CFR 177.1(c), 177.11(b)(3)). This ruling is our decision on the classification issue.

FACTS:

The imported merchandise is described as a yieldable mine arch support consisting of three specially arched channel sections and four clamps designed for use with the arch. The channel sections have a cross-sectional shape that, descriptively, appears like the Greek alphabet letter psi without the vertical intersecting line. For the three piece system the two leg sections have been bent to receive the canopy section which has also been bent to specification. When nested to form the support arch, the four clamps are torqued for a specific load capacity. When in use, the steel to steel friction of the overlapping or nested sections provides the yield load of each arch. These yield loads are essential in compensating for changes in mine shaft pressures.

Each arch is manufactured for a particular size of mine shaft, load capacity, and the type of equipment to be used in the mine shaft. These

RELEASED TO THE

G4

different needs are reflected by differences in the weight of steel, curve of each section, clamps, and number of sections necessary for each arch. A mine shaft will use a large number of arches. Planks, wire, or other roofing material cover the arches and assist in providing the safety and support of the mine shaft. The arches are apparently spaced three or four feet apart.

The importation also included extra canopy sections, clamps, and nuts and bolts, tiebars, and corrugated steel sheets. Each arch support unit, however, consists only of one canopy section, two leg sections, and four clamps.

It is the importer's position that the arches are classifiable under item 652.94 (item 652.96 if alloy steel), Tariff Schedules of the United States (TSUS), which provides for columns, pillars, posts, beams, girders, and similar structural units or, in the alternative, under item 653.00, TSUS, which provides for other structures and parts of structures of steel. The arches were classified by you under item 609.80, TSUS, which provides for angles, shapes, and sections, not drilled, not punched, and not otherwise advanced, other than alloy iron or steel.

It is your position that the individual arch support units are classifiable as an entirety, and the remaining components would be separately classifiable.

ISSUE:

At issue is whether or not the arch sections are basic shapes within the meaning of item 609.80, TSUS, or are precluded from classification therein by Headnote 1(iv), Part 2, Schedule 6, TSUS, because they are articles specially provided for elsewhere in the tariff schedules, or parts of articles.

THIS DOCUMENT MAY BE RELEASED TO THE

077494

LAW AND ANALYSIS:

Recent judicial opinions have provided specific applications of the operation of Headnote 1(iv), supra, concerning products clearly described in Part 2 of Schedule 6 but also described elsewhere either specifically or as a part of an article. Standard Commodities Import and Export Corp. v. United States, __ CIT __, Slip Op. 85-124 (1985); E. R. Hawthorne and Co. v. United States, Appeal No. 83-1379 (CAFC March 28, 1984); Nissho-Iwai American Corp. v. United States, __ CIT __, 602 F. Supp. 88 (1984), affirmed on Appeal No. 85-1259 (CAFC August 30, 1985).

The imported steel arches are dedicated to use as mine supports by virtue of a predesigned curvature of the leg and canopy sections. It is claimed that the components of these arches should be considered either eo nomine under item 652.94 (or 652.96) as beams or girders (the horizontal canopy section) and as columns or posts (the arching vertical leg sections) because they are designed to support vertical loads, or, under the principle of ejusdem generis, as an entirety which is a "similar structural unit" within those provisions.

The court's opinion in S. G. B. Steel Scaffolding and Shoring Co., Inc. v. United States, 82 Cust. Ct. 197, C.D. 4802 (1979), provides some guidance, although the stated issue in that case was whether shore frame systems were specifically described in items 652.90-652.98 (now 652.90 - 653.00) as other structures and parts of structures rather than as other articles of iron or steel in item 657.20 (now 657.25). The shore frame system comprises a number of components fitted and used together for various supporting or load bearing purposes. The support function of the shore frame is not unlike that of the steel arch under consideration.

G6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

After thoroughly discussing the meaning of the term "structure," the court concluded that the scaffold-like shore frames were classifiable as structures in item 652.98, TSUS (now 653.00).

The steel mine support arches are functionally similar to the shore frames which were used in a linear series or (unlike the mine supports) were stacked one on top of another. Each three-piece arch (plus the four clamps) is a complete unit, the components of which are precisely bent to form a specific size and shape for a mine tunnel. In view of the S.G.B. Steel Scaffolding case, supra, we consider the complete unit as a structure, rather than a beam, post, or similar structural unit which is functionally a part of a structure. Therefore, the mine support arches are classifiable as structures in item 653.00, TSUS.

Classification of each mine support arch in item 609.80, TSUS (or 609.82 if alloy iron or steel) is precluded by Headnote 1(iv) because an arch, under the facts submitted, is clearly identifiable as solely used as a mine support structure. Standard Commodities Import and Export Corp., supra, is noted.

The remaining components of the imported merchandise are separately classifiable. The extra canopy sections are classified in item 609.80, TSUS, and the extra clamps are classified in item 657.25, TSUS.

HOLDING:

Each mine arch support unit, consisting of three sections and four clamps, is an entirety and is classifiable as a structure in item 653.00, TSUS. The extra sections and clamps are separately classified as basic

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076794

66

shapes in item 609.80, TSUS, and as other articles of iron or steel in item 657.25, TSUS.

Because of the nature of the articles in issue, this decision is narrowly restricted to the facts of this case.

Beverly L. Pevsner, Esq.
Beiley & Pevsner
7600 Southwest 57th Avenue
Suite 107
Miami, Florida 33143

Dear Ms. Pevsner:

Your letter of December 19, 1985, concerns the tariff status of an ethanol/ethylbenzene mixture. The mixtures may be products of Brazil, Argentina, Italy, France or Poland.

You state that your client proposes to import a mixture consisting of 199-plus proof ethanol and ethylbenzene. Ethylbenzene content would be 15, 20, 25 percent or greater. The mixture will be used as an octane enhancer in motor fuel.

A mixture of ethanol and ethylbenzene, with an ethylbenzene content of 15, 20, or 25 percent of the entire mixture would be classifiable as a benzenoid mixture in item 407.16, TSUS. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. If a product of a country eligible for GSP benefits, such a mixture would be duty free, if all the requirements are met. If the mixture is a product of France or Italy, it would still be classifiable in item 407.16 but the highest rate applicable would be under item 427.88/901.50 at 3 percent ad valorem plus 60 cents per gallon. If a product of Poland, the highest rate under item 407.16 would be 20 percent ad valorem plus 60 cents per gallon. No decision can be made on the "or greater" amounts, as this is too vague a description upon which to base a decision.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

077496 PR

077496

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

This is in reply to a memorandum of December 17, 1985, file 816044, from your Chief, Commercial Operations Branch 3, concerning the question of whether textile belts accompanying dresses, pants, and the like, should be separately classifiable from those garments.

In our ruling of November 6, 1985, file 077013, this office held that ties were separately classifiable from the blouses with which they were imported. The basis of this decision was Headnote 3, Part 6, Schedule 3, Tariff Schedules of the United States (TSUS). The language in our ruling of November 6 clearly indicated that belts would also be separately classifiable from the garments with which they are imported. It is our view that the requirements of Headnote 3 take precedence over any prior rulings of the Customs Service or any practice that may have existed prior to the enactment of that headnote.

We have consulted with the Department of Commerce, which assisted in the drafting of Headnote 3, and have been informed that the separate classification of belts and ties was one of the main reasons for Headnote 3. Commerce is aware of the problems that will result from our application of that headnote to belts. However, in an effort to alleviate the situation, it was agreed that any ruling on the matter would be effective only to merchandise entered, or withdrawn from warehouse, ninety (90) days from the date that our ruling, copy enclosed, is published in the Customs Bulletin.

Sincerely,

(Signed) J. T. Rech

077496

This ruling concerns the tariff status of a certain dress.

FACTS:

The submitted sample is a woman's blue dress, stated to be a product of China, made from a woven fabric that is labelled to be 55 percent cotton and 45 percent man-made fibers. It has a stand collar; an 8-snap front opening that extends from the neckline to the elasticized waist; front and rear yokes that taper downward in a V-fashion and which are edged with burgundy-colored piping, the visible portion of which is less than 1/4 inch wide; less then elbow-length sleeves with two-button cuffs, and similar burgundy-colored piping inserted in the cuff seam; two belt thread loops, one at each side seam; two inserted pockets, one at each side seam just below the waist; and a large box-pleat in front that extends from the elasticized waist to the hem. The fabric from the body of the garment is slightly gathered where it meets the yokes, imparting a shirred effect.

Accompanying the dress is a tie-belt that consists of three sections. The two outer or tie portions are burgundy woven fabric strips, each approximately 3/8 inch wide and 29 inches long. The center portion, which is burgundy on one

RELEASED TO THE

G10

side and blue on the other, is approximately 25 inches long and 2-1/2 inches wide; the corners are rounded; and the burgundy side has four decorative-appearing, but otherwise nonfunctional, tucks that extend its length.

We assume both the dress and the tie-belt are in chief value of cotton.

ISSUE:

Two principal issues are presented by the subject garment and belt -- (1) is either ornamented for tariff purposes; and (2) are the belt and dress classifiable as a single entity or are they separately classifiable?

LAW AND ANALYSIS:

Headnote 3, Schedule 3, Tariff Schedules of the United States Annotated (TSUSA), lists the type of features that constitute ornamentation. One of the features listed is tucking. Therefore, the belt is ornamented with the four rows of decorative nonfunctional tucking. The dress is not ornamented for tariff purposes since neither the gathered appearance at the yoke seams nor the expandable box pleat are mentioned in Headnote 3. Furthermore, Customs has consistently held that, because of the existence of a practice, piping, the visible portion of which is less than 1/4 inch in width, inserted in the entire length of a seam, does not constitute ornamentation.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G11

067496

The Customs Service, in the past, has stated that there existed an established and uniform practice to classify fabric coordinated belts as entireties with the garments they accompanied, submerging the identity of those belts into the garments. However, subsequent to the practice finding and issuance of a number of rulings following the practice, Congress enacted Headnote 3 to Part 6, Schedule 3, TSUSA, which provides as follows:

> (a) Except as provided in (b) of this headnote, each garment is to be separately classified under the appropriate tariff item, even if two or more garments are imported together and designed to be sold together at retail.
>
> (b) The provisions of paragraph (a) of this headnote shall not apply to --
>
> (i) suits,
> (ii) pajamas and other nightwear,
> (iii) playsuits, washsuits, and similar apparel,
> (iv) judo, karate, and other oriental martial arts uniforms,
> (v) swimwear, and
> (vi) infant's sets designed for children who are not over 2 years of age.

In a ruling dated November 6, 1985, file 077013, Customs held that the comparatively recent enactment by Congress of Headnote 3, Part 6, Schedule 3, TSUSA, had, in effect, nullified past rulings and practices which were in conflict with that headnote. That ruling also interpreted Headnote 3 and concluded that the words "garment" and "garments" were intended to include accessories, such as neckwear, belts, and scarfs.

077496

G12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

We have contacted the drafters of Headnote 3, who confirmed that Headnote 3 was intended to eliminate the entireties rule as it was being applied to belts and neckwear, in particular. However, it was not intended that all belt-like articles fall within the purview of the headnote. Only substantial belts or belt-like articles are meant to be affected by the application of Headnote 3. In this regard, we conclude that, generally, all belts with nontextile attachments for closures are substantial. Tie-type belts that are no more than mere string ties made from the same fabric as their accompanying garments are not substantial and are considered to be part of those garments. In this instance, the tie-belt accompanying the subject dress is a substantial belt and is, therefore, separately classifiable from the dress.

HOLDING:

In accordance with the principles expressed above, the subject dress is classifiable under the provision for other women's dresses, of cotton, not ornamented and not knit, in item 384.4925, TSUSA, with duty at the 1986 rate of 12.8 percent ad valorem. This garment falls within textile and apparel category 336. The subject tie-belt is classifiable under the provision for other women's ornamented cotton apparel, not knit, in item 384.0996, TSUSA, with duty at the rate of 20 percent ad valorem. The applicable textile and apparel category designation is 359.

However, since we understand that most textile belts imported with articles of apparel are not invoiced separately and do not, when subject to visa, import license, or quota restriction requirements, have the necessary accompanying documentation, an importer of such merchandise may, for merchandise entered, or withdrawn from warehouse, for a period of ninety (90) days from the date of the publication of this ruling in the Customs Bulletin, continue to enter such merchandise as entireties, under one textile and apparel category. Upon the expiration of that ninety (90) day period, all merchandise subject to this ruling will be classified in accordance with the principles set out above.

MAR 26 1986

Miss H. K. W. Ho
British Embassy
Hong Kong Office
3100 Massachusetts Avenue, N.W.
Washington, D.C. 20008

Dear Miss Ho:

Your letter dated July 2, 1985, on behalf of Armel Enterprises, Inc., concerning the proper category designation for a women's blouse and shorts set buttoned together at the waist, has been referred to this office for a response.

The merchandise was entered at John F. Kennedy Airport as a romper under category 337. Customs, however, required visas for a blouse and shorts under categories 341 and 348, respectively. Sample merchandise accompanied your letter.

The submitted sample, manufactured from 100 percent woven cotton fabric, consists of shorts and a blouse buttoned together at the waist. The sleeveless blouse features a jewel neckline in the front and a full rear opening secured by a tie at the center. The shorts feature a fully elasticized waist. The item may be worn as separates or as a combination, either attached or unattached.

We do not agree with your designation of the garment as a romper. It is our view that an adult romper is a one-piece abbreviated garment. Garments with detachable top and bottom components are outside the scope of the term "romper" for customs purposes. In addition, the two garments do not combine to form a playsuit because, as stated above, they may be worn apart from each other.

Thus, the proper classification for the top is under the provision for blouses in item 384.4609, Tariff Schedules of the United States Annotated (TSUSA) under category 341. The shorts are classifiable in item 384.4725, TSUSA. The appropriate category designation is 348.

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox

Mr. Dumrong Indharameesup
Royal Thai Embassy
1990 M Street, N.W.
Suite 380
Washington, D.C. 20036

Dear Mr. Indharameesup:

Your letters dated June 28, 1985, and August 5, 1985, addressed to the Department of Commerce, and concerning the tariff classification of an unfinished sarong have been referred to this office for a response. A sample garment has been furnished along with your request.

The sample is a piece of printed woven cotton fabric which measures 40 inches wide and 67 inches long, and features two edges that have selvages and two edges that are unfinished.

The Customs Service has ruled that lengths of fabric suitable for draping into sarongs are classifiable as other wearing apparel. See ORR Ruling 93-69 dated March 25, 1969.

It is our view that the subject merchandise is suitable for draping around different parts of the body. Under General Headnote 10(h), Tariff Schedules of the United States Annotated (TSUSA), unifinished and finished articles are classifiable under the same tariff provision. Thus, both the unfinished and finished sarongs are classifiable under the provision for other women's wearing apparel, not ornamented, of cotton, other in item 384.5299, TSUSA, with duty at the rate of 9.4 percent ad valorem. A visa for category 359 is required for this merchandise.

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox

Miss H. K. W. Ho
Second Secretary of Hong Kong
Commercial Affairs
British Embassy, Hong Kong Office
3100 Massachusetts Avenue, N.W.
Washington, D.C. 20008

Dear Miss Ho:

You ask us, through Ms. Claire McDermott of the Department of Commerce, to review the tariff classification of a ladies' wool jacket imported by Woodstock Industries (your case number HK62/85). You submitted a sample jacket along with your request.

The sample submitted is a ladies' knit jacket with long sleeves, round neck, and a full-front opening which is fastened by seven metal buttons. The garment consists of 100 percent wool fibers. A narrow band of weft knit fabric is added to the ends of the sleeves, the neck, the front placket, and the entire bottom of the garment. This band has several functional purposes. It finishes the ends where it is placed, and it prevents fraying of the fabric ends. We have held previously that a band performing such functions does not constitute ornamentation for tariff purposes. See Customs Headquarters Ruling Letter (HRL) 070810 of June 14, 1983. The jacket is intended to be worn over other garments. It extends from the wearer's neck to the top of her hips.

The only issue you raise is whether the sample is a sweater or a jacket. You claim that the item is a sweater because it "is tailor made, of seven gauge, and with fully open front and long sleeves." In spite of the fact that the fabric of the garment has less than twelve wales per inch, we believe that the special tailored effect which this garment possesses enables Customs to rule out calling it a sweater.

To begin with, the tailored effect includes the fabric itself, which is specially treated by a boiling process. The process produces boiled wool fabric. Boiled wool fabric has a rigidity uncharacteristic of sweater fabric, which is known for its elasticity. This fabric also lacks the characteristic visible knit stitches generally associated with sweater fabric. Thirdly, the two front panels of fabric are sewn with an additional row of stitching on each side of the seam; this extra stitching is non-contrasting in color, but it adds to the tailored effect. In addition, the fact that the garment itself is constructed from several cut panels sewn together also gives it a tailored look. The net effect of the tailored look on the fabric and on the garment is to remove it from consideration as a sweater and to put it into the category of a "jacket."

AS

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

077506

Finally, we note that the sample is representative of a style of garment that was originally made in Austria and in West Germany, where it was known as a loden coat. Although the current sample is made in Hong Kong, it is an imitation of that style. We are informed that it is commercially recognized in the wearing apparel trade as a coat or jacket, not as a sweater.

The sample is classified under the provision for other women's wearing apparel, not ornamented, of wool, knit, other, valued over $5.00 per pound, coats, in item 384.62, dutiable at the rate of 32 cents per pound plus 20 percent ad valorem for products of Hong Kong. The textile quota category is 435. Due to the frequent changes in the statistical suffixes (i.e., the last two digits of the item number) and the applicability of import restraints, the importer should contact his local Customs office prior to the importation of this merchandise.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Re: Tariff Classification of Cotton Towels

Dear Miss Ho:

This is in response to your letter of July 30, 1985, addressed to the Department of Commerce and forwarded to this office for decision, requesting a classification of certain cotton articles described as towels. The towels are being imported by the Hotel Meridien, San Francisco, California.

The submitted sample is an article of terry construction, 22 x 34 inches in size, and jacquard figured. While not expressly stated in your request, it appears that you are concerned with reclassification of importations of the towel-like article that have already been made.

The subject article, while referred to as a towel in the trade, is, in fact, a bathmat. It is of a weight and size which would indicate use as a bathmat. Further, the article includes an internal border pattern characteristic of a bathmat rather than a towel.

The subject bathmat is classifiable as other furnishings, not ornamented, of cotton, of pile or tufted construction, under item 366.65, Tariff Schedules of the United States (TSUS), dutiable at the rate of 8.5 percent ad valorem. Articles classifiable under this item number are subject to the restrictions of textile category 369.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A1

We note that you have apparently requested a ruling on a matter that is not prospective, but rather is the subject of a current transaction. Technically, this is in contravention of the Customs Regulations. We caution that the Internal Advice procedures spelled out in section 177.11 of the Regulations (19 CFR 177.11) should be used in future when classification disputes arise with regard to current transactions.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

12 FEB 1986

Mr. Peter Park
United Fabrics of America
570 7th Avenue, #703
New York, New York 10018

Dear Mr. Park:

This is in response to your letter of November 18, 1985, in which you requested information regarding the country of origin, classification, dutiability and quota category of woven fabric to be imported from Korea.

Your questions refer to two types of merchandise: greige fabric made in the United States and shipped to Korea to be dyed, printed and finished, and U.S. made yarn also shipped to Korea to be woven into fabric which will then undergo the same processes mentioned above.

The fabric is fully dutiable as a product of Korea and is classified in item 338.50, Tariff Schedules of the United States (TSUS), which provides for other woven fabrics of man-made fiber. The rate of duty is 2 cents per pound plus 17.9 percent ad valorem.

The tariff provisions permitting an allowance for U.S. made materials are inapplicable in this case. Although item 806.20, TSUS, provides for articles exported for repairs or alterations, the processing operations described above are considered part of the manufacturing of the finished articles and go beyond the scope of this tariff provision. The processing in Korea involves more than mere assembly and thus, the merchandise is also ineligible for tariff treatment under 807.00, TSUS, which provides a duty allowance for U.S. made components assembled abroad.

In the first instance, the fabric is dyed and printed. In the second instance, weaving, dyeing and printing of the fabric occurs. None of these operations can be considered assembly operations.

Headnote 2, Part 1, Schedule 8, TSUS, provides that any product of the United States which is returned after having been advanced in value or improved in condition abroad or assembled abroad, shall be a foreign article. The fabrics involved in both situations you propose require a visa from the Korean government upon return to the United States. Presently, we do not have enough information to determine the textile category of these fabrics. It may be subject to absolute quota. Please find enclosed the tariff schedules containing item 338.50, TSUS, which may prove useful to you in determining the further statistical breakdown of the imported fabric. This breakdown is necessary in order to determine the textile category needed for quota purposes.

A10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In conclusion, no allowance is made for the U.S. made material involved. The domestically made greige goods sent to Korea for dyeing and finishing and also the domestically made yarn sent to that country for dyeing, weaving into fabric, and finishing is subject to full duty under item 338.50, TSUS, at the rate of 2 cents per pound plus 17.9 percent ad valorem.

In regard to your question concerning the procedure before shipping and necessary documentation, we have enclosed a copy of "Importing into the United States." If you have other questions in this area, you should write to the Area Director of Customs, 6 World Trade Center, New York, New York 10048, or call our National Import Specialist, located in New York — Ms. Alice Masterson (212-466-5896).

Sincerely,

For Harvey B. Fox

Re: Classification of Surgical Towel

Dear Mr. Giagu:

This is in response to your letter of November 27, 1985, requesting a ruling concerning the classification of surgical towels which are the products of mainland China. You also request information as to any other requirements regarding the importation of these articles. Samples have been submitted.

You state that the towels will be imported in bulk. They will be inspected, washed, dried, folded, packaged and sterilized in the United States. It is claimed that the articles to be imported will not be used as towels. Rather, you aver that they will be used as surgical drapes for absorbing excess fluids from the surgical site or acting as a sterile field for surgical instruments. You claim that they are not sold as towels but as Operating Room Towels, with the primary function of infection control.

The submitted samples are of 100 percent cotton woven fabric. They are sealed in a sterile surgical pack and measure 16 by 32 and 1/4 inches. By name and use the subject samples are towels. The articles are the same size and shape as towels and are bought and sold as such. Accordingly, your suggestion that these articles are surgical drapes rather than towels is rejected.

The towels are classifiable under the provisions for other furnishings, not ornamented, of cotton, other towels, not jacquard-figured, under the provisions of item 366.26, Tariff Schedules of the United States (TSUS), dutiable at the rate of 11.3 percent ad valorem. A visa is required for the importation of such towels under category number 369.

A12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Pursuant to section 304 of the Tariff Act of 1930 (19 U.S.C. 1304) and section 134.11 of the Customs Regulations (19 CFR 134.11) every article of foreign origin (or its container) imported into the United States shall be marked in a conspicuous place as legibly, indelibly, and permanently as the nature of the article (or container) will permit, in such manner as to indicate to the ultimate purchaser in the United States the English name of the country of origin of the article, at the time of importation into the Customs territory of the United States.

As noted, the towels are imported in bulk, with the bulk packages marked as being the product of China. The packaging for each individual towel is not marked with any country of origin. While the towels undergo certain processes in the United States, we are of the view that none of these processes, including washing, drying, packaging and sterilization, can be considered to substantially transform the imported product into a new and different article of commerce having a new name, character and use. Accordingly, marking only of the bulk importations does not indicate the country of origin of the product to the ultimate consumer and is inadequate.

Be advised that for Customs purposes each individually packaged towel must be conspicuously marked on such package as a product of China. Additionally, the towels must be marked in conformance with the rules and regulations of the Textile Fiber Products Identification Act. This Act is administered by the Federal Trade Commission. We suggest that you contact that agency for information concerning its marking requirements.

Sincerely,

John T. Carl

077536

Miss Beth C. Ring
Attorney at Law
Sandler & Travis, P.A.
505 Park Avenue
New York, New York 10022

Dear Miss Ring:

Your letter of December 26, 1985, supplements the information provided in your request for a ruling dated August 14, 1985, and follows our letter to you dated December 24, 1985 (our file No. 076798). You have requested a ruling as to the tariff status of finished shirts exported from Israel (country "B"), which are made in part in country "A" and in part in Botswana (country "B"). Your request is on behalf of [redacted]

You request confidential treatment of the name of country B and for the extensive cost and production figures provided us. Samples of two shirts have been provided: an oxford cloth boy's size with button-down collar and a women's over-sized "big shirt." We understand that these samples are not made in the two countries specified, but are provided as examples of the shirts proposed to be imported. You state that in the past your client has imported shirts that have been classified in items 379.55 and 383.47 of the Tariff Schedules of the United States (TSUS). Since September 1, 1985, those items have been renumbered to 381.56 and 384.46 respectively and bear the respective column one rates of duty of 21 and 16.5 percent ad valorem. When eligible for duty reduction under the United States-Israel Free Trade Area Implementation Act of 1985, the items would bear 14.7 percent and 11.6 percent ad valorem rates of duty.

Although your original ruling request described four possible production alternatives, you have since identified one of these as the production method to be followed. This method has the patterns made in country A and shipped with the shirt fabric to country B where the components would be cut, the collars, cuffs, pocket flaps and placket would be sewn (or faced) and the buttons sewn to the placket. All the components would then be returned to country A where buttonholing of the placket and presumably of the cuffs (and in some instances the collar) takes place prior to assembly and pressing.

A14

ED TO THE

Citing 19 CFR §12.130(b), you correctly note in your submission of August 13, 1985, that a textile product that consists of materials produced in more than one foreign country is considered a product of the country where it last underwent a substantial transformation or a "transformation into a new and different article of commerce." You also note that an example provided in our regulations (19 CFR §12.130(e)(1)(v)) namely, "substantial assembly by sewing and/or tailoring of all cut pieces of apparel articles which have been cut from fabric in another foreign...country...into a completed garment (e.g. the complete assembly and tailoring of all cut pieces of...shirts)" conforms to the operations expected to be undertaken in country A by your client, suggesting that the finished shirts would be a product of country A.

You responded to our request for detailed financial information by providing the name and function of the machine involved in each operation, the capital investment involved with each processing operation (by stating the cost of the machines), and the costs involved with each processing operation by stating the wage rate of each operator by occupation, whether in country A or country B. This information remains part of our file and forms the basis for our decision.

The information you provided shows that the parts of the shirt, even those faced, do not constitute a shirt when they leave country B and that the processes that take place in country A substantially transform the parts into a finished shirt which is a new and different article of commerce.

The capital investment is primarily in country A when compared to country B and bears a ratio of about 12:1. The time involved in labor applied to the garment or its parts runs in favor of country A in a ratio of about 2:1. Our regulations require an examination of time, labor, and capital, among other things, to perform an analysis of whether manufacturing processes are substantial in a given country with respect to a specific product; therefore, our focus must be on the product, itself, and what is done to it, to determine where the substantial manufacturing took place. Nevertheless, it is useful to compare the relative cost and complexity of the manufacturing steps to arrive at a country of origin determination.

077536

RELEASED TO THE

B'

Taking all the factors presented into consideration, we conclude that country A is the country where the substantial manufacture of these shirts takes place. Therefore, they should be marked as having Israeli origin.

The difficulty in making a determination of country of origin will necessarily vary according to the financial facts and evidence presented. Our regulations are drafted in comprehensive language to permit relevant factors to be considered. Therefore, simple tests such as comparing the number of components assembled in one country to the number assembled in another, while easy to apply, will not necessarily lead to a correct answer.

If your client's processing or manufacturing plans change, we will endeavor to respond with a country of origin determination to specific descriptions of the new processes, as appropriate.

The claim for confidentiality will be allowed for the business and proprietary information presented. The claim of confidentiality with respect to the identity of country B will not be allowed on the grounds that the mere name or identity of a country from which goods may be lawfully imported into the United States is not a proprietary or business confidential matter.

Sincerely,

(Signed) Harvey B. Fox

Harvey B. Fox,
Director, Classification
and Value Division

Ms. Cheryl Osborne
Lancaster Distral Group
1125 N.E. 7th Avenue
P.O. Box 417
Dania, Florida 33004

Dear Ms. Osborne:

Your letter of November 12, 1985, concerns the dutiable status of fuel grade anhydrous ethanol, a product of Colombia.

You state that the grain feedstock used to produce the ethanol in Colombia would probably be grain sorghum grown in the United States.

The ethanol in this case would be considered a product of Colombia, and would be classifiable in item 427.88, TSUS, with a rate of duty of 3 percent ad valorem. In addition since it is a fuel grade ethanol, it would be subject to an added duty of 60 cents per gallon in item 901.50, TSUS. The fact that the grain sorghum is grown in the United States would not affect the ethanol's classification or rate of duty.

Sincerely,

Harvey B. Fox

Mr. Robert Prach, Traffic Manager
H. H. Brown Shoe Co., Inc.
630 Third Avenue
New York, New York 10017

Dear Mr. Prach:

In Customs Headquarters Ruling Letter (HRL) 076906 of November 26, 1986, you were advised that certain unfinished work boots from South Korea would probably be classified in item 700.35, Tariff Schedules of the United States (TSUS).

It has been brought to our attention that the outsole in HRL 076906 can only be attached to the welt strip by means of stitching or cementing. Both means of attachment would result in welt footwear classifiable in item 700.27, TSUS, if valued over $5.00 but not over $6.80 per pair, or in item 700.29, TSUS, if valued over $6.80 per pair.

HRL 076906 is hereby modified accordingly. The unfinished work boots which were the subject of that letter are classified in item 700.27, TSUS, or in item 700.29, TSUS, depending upon their value.

Sincerely,

Arthur P. Schifflin

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON, D.C. 20229

REFER TO

3 FEB 1986

CLA-2:CO:R:CV:G
077561 JCH

This decision concerns the tariff classification of spark detectors and is issued pursuant to the remand order by Chief Judge Edward D. Re, U.S. Court of International Trade, in EAC Engineering Division of East Asiatic Company, Inc. v. United States, Court No. 82-1-00096. Our decision follows:

ISSUE:

In the court's memorandum opinion and order of October 24, 1985, Slip Op. 85-111, the liquidated classification of the merchandise under the provision for optical measuring, checking, analyzing, or automatically-controlling instruments and apparatus in item 712.05, Tariff Schedules of the United States (TSUS), was not sustained, but the court at the same time declined to accept the plaintiff's alternative claim for classification under the provision for nonoptical measuring, checking, etc., apparatus in item 712.49, TSUS, even though the Government conceded the alternative applicability of that provision. In a clarifying opinion and order issued on November 26, 1985, Slip Op. 85-120, it was indicated, in effect, that the item 712.49 classification would not be considered until the court had the benefit of the Customs Service's views regarding material facts and other considerations not previously taken into account administratively and bearing on the plaintiff's additional alternative claims for classification of the merchandise under the provision for electrical measuring, checking, etc.,

B6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

apparatus used for measuring or detecting alpha, beta, gamma, X-ray, cosmic and similar radiations, in item 712.15, TSUS, and the provision for electrical articles, not specially provided for (n.s.p.f.), in former items 688.40 and 688.45, TSUS, depending on the year of importation.

FACTS:

The merchandise is a photoelectric device which detects the infrared radiation from sparks in industrial ducts or pipes through which combustible materials flow. Upon spark detection, a signal is received by a control console which activates a dousing mechanism. This merchandise was previously described in our protest review decision of July 17, 1981, file No. 067394, and classified as optical goods. Supplements to that description and the more complete description of the merchandise in Slip Op. 85-111 as they may relate to the ascertainment and consideration of new material facts pertinent to a correct classification of the merchandise are as follows:

LAW AND ANALYSIS:

With respect to the claimed applicability of item 712.15, we can discern no dispute as to the fact that the sensor in question reacts only to infrared energy or as to the fact that no secondary reaction in its silicon element or in the larger apparatus in which impulses are received involving energy emissions at a higher frequency or of an ionizing type occurs. It would also seem self-evident that item 712.15 is limited to

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

195660

B1

articles dealing with electromagnetic energy above the ultraviolet spectrum or with ionizing radiation, and that articles sensing electromagnetic energy below the X-ray spectrum are not included. Materials supporting this conclusion include the Explanatory Notes to the Brussels Nomenclature (1966), Vol. 3, pp. 1640 and 1641, and the Summary of Trade and Tariff Information, Analytical and Other Scientific Instruments (1983), p. 53.

Doubt, therefore, would only seem to be injected with respect to the nonapplicability of item 712.15 by reference in the latter document to "semiconductor counters" as includable in that item. However, it is our conclusion that that description does not include the silicon device in question, but rather includes only semiconductor devices used to detect ionizing radiation or electromagnetic radiation above the ultraviolet spectrum. Therefore, the instant merchandise does not satisfy the requirements of item 712.15, which are a duplication of the requirements of Headnote 2(c), Subpart D, Part 2, Schedule 7, TSUS.

The claim for classification under item 712.49 is subject to a different headnote requirement, viz., the requirement in subdivision (a) of the same headnote that other electrical measuring, checking, etc., instruments and apparatus operate using an electrical phenomenon which varies in accordance with the factor to be ascertained. The facts as previously stated by us and by the court include no information as to the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077561

B8

satisfaction of this headnote requirement. Therefore, this would appear to represent an area where the record is incomplete, where the court's primary interest in the remand is focused, and where considerations equally germane to both remaining claimed classifications are involved.

This interpretation of the remand order is also reinforced by our concurrent reading of Chief Judge Re's views in A & A International, Inc. v. United States, 5 CIT 183 (1983). In that matter, the classification of detecting and signalling apparatus under both item 712.49 and the basket provision for electrical goods was rejected in favor of the specific provision for signalling apparatus in item 685.70, TSUS. Since Headnote 1(vi), Part 5, Schedule 6, TSUS, the part where item 685.70 appears, excludes from that part "electrical instruments and apparatus provided for in schedule 7", where item 712.49 appears, it was assumed that classification under the latter item was rejected because the varying-electrical-phenomenon requirement was not satisfied. Unlike the language in other TSUS exclusionary headnotes, the above-quoted language does not limit the exclusion to merchandise "specifically" provided for elsewhere. In this connection, item 712.49 cannot be characterized as nonspecific or as a basket provision anyhow since an "other" breakout can only be regarded as such if the language in the superior heading to which it relates includes an n.s.p.f. phrase.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B9

079561

"Other" breakouts otherwise carry the same degree of specificity as the language in the superior heading to which they relate. Therefore, despite previous references to item 712.49 as a basket provision, we view the remand order as a requirement similar to the result of the A & A International, Inc. decision that claims for item 712.49 classifications be based on an affirmative showing through the pertinent material facts that the varying-electrical-phenomenon requirement has been met.

The long-held view, although not specifically defined by either court or administrative precedents, has been that the requirement is satisfied if an analog electrical signal is involved as opposed to electrical applications associated with bistable or so-called flip-flop and similar devices. The electrical phenomena employed in photoelectric devices may be in either category depending on whether they are involved in a quantitative determination or just detect the presence or absence of light above or below ambient or other set energy levels. If of the latter type, the instant sensor would detect a phenomenon which would be analogous to the phenomenon which Chief Judge Re described as merely an "abnormal or temporary event" in the A & A International, Inc. matter, supra, at 189, after citing previous authority using the same description.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077561

B10

An examination of the submissions in our previous file in this matter discloses little technical information concerning the operation of the sensor except that the scan is at a 130 - degree angle. It is also stated that "an impulse is fed to the control console" when a spark passes within the scan. Further information furnished in support of the protest includes descriptions of the silicon element and its housing which also add little to the court's description. However, the foregoing offers clues upon which various assumptions may be predicated.

Photoelectric sensors of the type which would satisfy the varying-electrical-phenomenon criterion would generally be of the photoresistive or photoconductive type in which variations of an electrical parameter, such as resistance, occur that are proportionate to variations in light. It is this type of sensor to which the term "transducer" would be more appropriately applied, a term we note is absent in the descriptive materials available to us. This type of sensor deals with changes in electricity rather than with the generation of electricity.

The reference to the feeding of an impulse to the control console suggests the generation of electricity or of a signal which is more typical of photovoltaic sensors. These are less typically used for quantitative determinations. However, both types of sensors may have silicon elements, and both types may

079561

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B11

be used for either quantitative determinations or in more simple applications merely involving switching control. Therefore, while the use of one type of sensor or another would be a factor to be considered in determining whether the applicable headnote requirement has been satisfied, the main consideration would be how the sensor is used.

In this connection, while we note that the larger system is further described as operating in a wide range from the near visible to the invisible infrared spectrum, it is our conclusion that has reference only to the setting of the threshold level of detection on the control console. Our analysis of the system is that no quantitative measurements are made and that any variations between the threshold and maximum levels of energy detection still result in a single, rather than a proportionate or incremental, response in the system. We further note that the control console performs through its own internal programming many of its functions, such as coordinating responses to sparks in multiple locations, timing of the dousing period, etc., independently of the response from any single sensor.

But our lack of attention to this apparent disqualification under the varying-electrical-phenomenon requirement both in our previous classification of the instant merchandise and in the defense of this litigation should not be regarded as inadvertency on the part of the Customs Service. Rather, it

077561

B12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

reflects awareness of the principle of United States v. Corning Glass Works, 66 CCPA 25, C.A.D. 1216 (1978), in which it was held that "checking" as used in the TSUS does not require a measurement. Accordingly, it was our view that the sine qua non for satisfaction of the applicable headnote requirement could no longer be regarded as an analog electrical phenomenon or a quantitative determination. It necessarily followed that considerations concerning into which category of photoelectric device the instant merchandise fell was, for the most part, not pertinent to its tariff classification, and that the salient automatically-controlling features of the total system should be regarded as the primary design and functional features more pertinent for tariff classification purposes. In this reconsideration of our previous classification and its underlying premises, it is our conclusion that our reliance on the Corning Glass Works decision, supra, was misplaced.

It is now our opinion that while "checking" as used in the TSUS does not require a quantitative determination, it does, at least, require a qualitative determination. Against this reevaluation, the instant sensors cannot be shown to meet either standard. But that does not mean that classification as electrical articles, n.s.p.f., automatically ensues.

Sensors and transducers are not specially named in the TSUS, and their classification is usually determined by their status as parts chiefly used as components of the larger

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077561

B13

apparatus which responds to the sensed phenomenon. Classification in a basket provision would only be warranted when no specific provision exists for either the larger apparatus or the component of the larger system of which the sensor is most immediately a part of. It has been our position that industrial control devices not otherwise provided for elsewhere are specifically contemplated under the description for control panels in item 685.90, TSUS. A supporting reference for this view is the Explanatory Notes to the Brussels Nomenclature, id. p. 1450. Also of interest in this connection is Heading 8537 of the draft Conversion of the Tariff Schedules of the United States into the Nomenclature Structure of the Harmonized System (1983), which is derived, in part, from our present tariff treatment of qualifying control devices as control panels.

HOLDING:

1. Alpha, beta, gamma, X-ray and cosmic radiations are a class or kind of radiation which involves electromagnetic energy at frequencies above those for the ultraviolet spectrum or corpuscular or ionizing energy.

2. Infrared radiation is not included among the types of energy described above.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B14

079561

3. Neither the sensors in question, nor the larger apparatus of which the sensors are components, detect energy outside of the infrared spectrum, nor do they employ secondary reactions involving higher-frequency electromagnetic or corpuscular or ionizing emissions.

4. The signals produced by the sensors in question are a response above a set threshold level from a silicon element which either varies an electrical parameter in response to light or together with a junction or barrier layer produces an electrical potential in response to light.

5. The control console receiving the signal responds only to energy levels above the threshold level, and the same response is made regardless of any variations in an electrical parameter.

6. The sensor and control console make no quantitative or qualitative determinations regarding the nature of the sparks or the amount of sparks detected.

7. Neither the sensors nor the control console either separately or in combination depend for their operation upon an electrical phenomenon which varies in accordance with the factor to be ascertained.

8. The control console is primarily a switching device controlled by a combination of the signals from attached sensors, internal programming, and manually-operated push button controls, and is used for industrial control purposes, rather than in scientific applications.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

9. The sensors are made to specifications for chief use as parts of the control consoles to which they are attached by wires.

10. Based on the foregoing findings as to material facts and the preceding discussion, we respectfully propose for the court's consideration reclassification of the merchandise at issue under the provision for control panels and parts in item 685.90, TSUS.

Mr. Irv E. Grayson
Filex International Inc.
3434 Lang Road
Houston, Texas 77092

Dear Mr. Grayson:

This is in reference to letters from your firm of August 9, and December 16, 1985, concerning the dutiable status of an ethanol-ethylbenzene mixture from Brazil. The typical analysis of the product was said to disclose an ethanol content of 70 percent and an ethylbenzene content of 8 percent, with the balance being various types of xylenes.

A mixture with the composition stated above is classifiable under the provision for benzenoid mixtures in item 407.16, TSUS. A product of Brazil classifiable in item 407.16 is entitled to duty free status under the Generalized System of Preferences. An ethanol mixture containing ethylbenzene in the amount of 7 percent or more of the entire mixture would be classified as a benzenoid mixture in item 407.16.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Mr. Terry Oikawa
C. Itoh & Co. (America) Inc.
1001 Fannin Street, Suite 2410
Houston, Texas 77002

Dear Mr. Oikawa:

In your letter of November 8, 1985, you requested a ruling on the tariff classification of several articles. In a ruling of December 20, 1985 (file 816393), all articles except for the conductor pipe were classified. This ruling concerns the classification of the conductor pipe.

As described in your letter, the conductor pipes will be of steel, measuring 26 inches in outside diameter and having a wall thickness of 1 inch. They will be in lengths of up to 70 feet, 70 to 100 feet, and over 150 feet. The ends of each pipe will be bevelled. Certain sections of the pipe will be rubber sheathed with a copper/nickel cladding. An epoxy coating may, as an option, be added to pipes below the splash zone. All pipe surfaces above the splash zone will be multicoated.

The conductor pipes are casings which provide a barrier to the sea water, silt, and other foreign material, and protect the drilling apparatus and other essential pipes and equipment encased within them. The various protective coatings, sheathing, or metal cladding do not make the pipe more than what what is: tubular casing.

Steel casings of this kind are classifiable under the provision for pipes and tubes in Subpart B, Part 2, Schedule 6, Tariff Schedules of the United States (TSUS). See the comments on this at page 95 of the Tariff Classification Study, Schedule 6 (November 15, 1960). Therefore, depending on metallurgical composition, method of fabrication of the steel pipes, and other relevant criteria for the classifi-

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

CV

cation of pipe, all of the conductor pipes described by you would be classified in Subpart B, Part 2, of Schedule 6, TSUS, under the appropriate provision for pipes and tubes.

Sincerely,

Dear Mr. Townley:

Your letter dated October 11, 1985, addressed to our New York office concerning the dutiable status of a PVC garment bag produced in Taiwan, has been referred to this office for a direct reply to you. A sample was submitted for examination.

The sample garment bag made of 4 mil thick polyvinyl chloride has been embossed to impart a simulated nylon appearance. It measures 40 inches by 24 inches and has a 32 inch nylon coil zipper closure. The bag is designed so that when a garment is carried by a hanger handle, the bag serves as a protective covering. The front of the bag is imprinted with the name of a retail clothier.

You suggest that this garment bag is classifiable under the provision for containers of rubber or plastics, with or without their closures, chiefly used for the packing, transporting, or marketing of merchandise in item 772.20, Tariff Schedules of the United States (TSUS).

In the case of Imperial Packaging Corp. v. United States, 2 CIT 250 (1981), the court interpreted the term "merchandise" as used in item 772.20, TSUS, as referring "to products which are still in the stream of commerce" rather than articles which are personal effects or commodities in the hands of the ultimate consumer. In this instance classification under item 772.20, TSUS, is precluded because the garment bag is given to the purchaser after the marketing process has terminated.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides that "For the purposes of the tariff schedules — (a) the term 'luggage' covers — (i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel."

It has been consistently our position to view substantiality of construction as essential to a finding that an article is designed to contain clothing or other personal effects during travel. An examination of the sample bag reveals that it is substantially constructed noting that the seams are reinforced with PVC edging and stitching.

c6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In view of the foregoing, it is our opinion that garment bags represented by the sample are classifiable under the provision for other luggage of other materials in item 706.62, TSUS, and dutiable at the rate of 20 percent ad valorem.

Sincerely,

Arthur J. Schaffner

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-007494

This protest was filed against your decision in the liquidation on March 23, 1984, of entry No. 84-268532-4 dated February 23, 1984.

FACTS:

Certain athletic footwear produced in Korea and designated as style Nos. BOG-6277 and EOG-6277 were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear is in chief value of leather and should have been classified under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Should the cost breakdowns submitted by the protestant showing the footwear to be in chief value of leather be accepted?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous or (3) the

C8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on this matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

In reviewing the manufacturer's breakdowns, we note that the manufacturer has allocated his stitching costs on the basis of his material costs which is erroneous. Our previous instruction on this matter was that the "cost of stitching leather overlays onto the fabric uppers should be allocated among the materials comprising the uppers in proportion to their relative weights."

In view of the foregoing we have ignored the stitching charges shown on the manufacturer's breakdowns because they are incorrect and without these charges the following listed styles with split leather overlays are in chief value of rubber/plastics:

Style No.	Leather Total	Rubber/Plastics Total
BOG-6277 (Invoice No. 1)	$1.109	$1.118
BOG-6277 (Invoice No. 3)	$ .894	$ .947

Based on the revised component cost figures, style No. BOG-6277 (invoice No. 1) and style No. BOG-6277 (invoice No. 3) were properly liquidated under item 700.95, TSUS.

With respect to the component cost breakdowns submitted covering the remaining styles, we have no "tangible evidence" that the leather costs are false. Consequently, we will accept the documentation submitted showing

077586

c9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

them to be in chief value of leather. However, the youth's sizes 11-1/2 to 2 should be treated as unisex and reliquidated under item 700.45, TSUS.

HOLDING:

The protest should be denied in part as to those styles covered by style No. BOG-6227 (invoice No. 1) and style No. BOG-6277 (invoice No. 3) and allowed as to the remaining style numbers. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Dear Sir:

Re: Decision on Internal Advice 50/85 on the Classification of 21 Entries Involving Petroleum Products of Mexico

The products were described by the Customs laboratory as "Blending Gasoline." They were said to be a complex mixture of hydrocarbons and benzenoids containing lead.

On behalf of the importer it is contended that the 21 entries should be classified as benzenoid mixtures in item 407.16, TSUS.

Analysis of representative samples by an independent laboratory were submitted by the importer. These samples were tested by laboratories not associated with Customs approved public gaugers and, therefore, the results are not from Customs approved petroleum laboratories.

A review of samples from six of the entries based on information supplied by the importer led the Customs laboratory to the opinion that none of the samples met the minimum octane rating for leaded gasoline under the current standards, (ASTM D 439); and that only three of the entries conformed to the specifications for leaded motor fuel under T.D. 66-23(13) standards; and that possibly six of the entries could be classified under item 407.16, TSUS. On review of the data supplied and tests made on three of the six entries, it was concluded that all six probably contained over 5 percent dutiable benzenoids since they all had similar boiling ranges.

Based on all of the the evidence supplied, the 21 entries are classified as follows:

Entry Nos.	Classification TSUS No.
84 103 068-2	475.25
84 103 358-2	475.25
84 367 916-4	475.25
84 103 274-5	407.16
84 103 321-0	407.16
84 103 336-2	407.16
84 104 089-2	407.16

909 First Avenue
Seattle, Washington 98174

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 30014-0-00191

This protest was filed against your decision in the liquidation on March 16, 1984, of entry No. 83-987438 dated March 22, 1983, covering certain footwear produced in Korea.

FACTS:

Certain jogger type footwear was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that this footwear is properly classifiable as leather footwear under item 700.35, TSUS, or item 700.45, TSUS, according to gender and value per pair.

ISSUE:

Should the cost breakdowns showing the footwear to be in chief value of leather be accepted?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous; or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

077589

C13

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that importer submitted data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

The leather claimed to be present in the shoes and the leather present in the shoes as found by laboratory analysis is as follows:

Stock No.	Claimed Present	Lab. Finding
72184	.712 sq. ft.	.70 sq. ft.
75383	.92 sq. ft.	.90 sq. ft.
79129	.80 sq. ft.	.84 sq. ft.
75151	1.50 sq. ft.	1.42 sq. ft.
73169	.719 sq. ft.	.64 sq. ft.

Although there is an overstatement of the leather present on four of the five styles, it is not sufficient to change them from chief value of leather to chief value of rubber/plastics. There are other items on the cost breakdowns which are improbable, e.g., $.45 per pair to "inspect" and "cut" the leather in stock No. 079129, but we do not have "tangible evidence" which would enable us to categorically state that the costs assigned are false.

HOLDING:

We accept the cost breakdowns showing the footwear to be in chief value of leather. The protest should be allowed. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Scheffler

Buffalo, New York 142302

Dear Sir:

Re: Decision on Application of Further Review of Protest No. 0901-5-850022

This protest was filed against your decision in the liquidation of several entries filed in July 1984, covering merchandise which is edible preparations known as "Giant Freezies" and "Super Pops."

FACTS:

The merchandise involved in the application for further review consists of "Giant Freezies" and "Super Pops" made of water, frustose-glucose, citric acid, natural and artificial flavors, carboxymethyl cellulose and artificial colors, preserved with 1 per cent sodium benzoate and potassium. The merchandise is manufactured by Kisko Products of Canada, sold in a liquid state and subsequently frozen by the retail consumer prior to consumption.

The merchandise was classified under item 183.05, Tariff Schedules of the United States (TSUS), which provides for other edible preparations. Protestant claims that the merchandise in question is more appropriately classifiable under the provision for other beverages, not specially provided for, in item 166.40, TSUS. Protestant also claims that the merchandise is properly classifiable under this latter provision by virtue of an established and uniform practice.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D1

ISSUES:

a. Whether the "Giant Freezies" and "Super Pops" are classifiable as edible preparations in item 183.05, TSUS, or as other beverages, not specially provided for, in item 166.40, TSUS.

b. Whether there is an established and uniform practice requiring classification under the provision claimed by protestant, item 166.40, TSUS.

LAW AND ANALYSIS:

a. Headnote 1, Subpart B, Part 12, Schedule 1, provides that to be classified in this subpart as a beverage a product must be "fit for use as a beverage." To have merely the possibility of such use is insufficient. See Ruling 068841, October 8, 1981.

Although the merchandise reached the consumer in liquid form and could possibly be drunk, it is intended by the manufacturer that the product be frozen and consumed in its solid form. "Giant Freezies" and "Super Pops" are substances prepared and chiefly used as human food. See Headnote 3, Subpart B, Part 15, Schedule 1.

b. A mere list of liquidated entries is insufficient to show an existence of an established and uniform practice of classification. Even if this list was considered a basis for a uniform practice, no practice is shown in this instance because all of the listed importations have occurred at the same port in the same month. Furthermore, there were relatively few importations in this short period of time. No other specific information about these importations has been provided.

HOLDING:

"Giant Freezies" and "Super Pops" are properly classifiable as other edible preparations under item 183.05, TSUS, dutiable at 10 percent ad valorem.

Mr. Ike Matitia
International Seaway Trading Corp.
1328 West 9th Street
Cleveland, Ohio 44113

Dear Mr. Matitia:

You have requested a ruling on the classification of a men's P.U. Upper Court Shoe, style No. 64-65071-A.

Because we do not consider this shoe to have a "foxing-like band applied or molded at the sole and overlapping the upper," it is classifiable in item 700.56, TSUS. The extended bumper in the front of the shoe overlaps the upper by about one half inch and is cemented and stitched to the upper. There is no question that this piece looks and functions like a foxing. However, it does not "substantially encircle" the upper. The back sidewall overlaps the entire height of the EVA midsole wedge, but it has been "tucked in" at its top so it neither "overlaps the upper" nor appears to do so by even a "de minimis" amount. Hence it would not count towards "substantial encirclement" of the upper.

Sincerely,

Arthur P. Schaffner

077606

Ms. Shirley Ross
Shelcore Inc.
1107 Broadway
Suite 1516
New York, New York 10010

Dear Ms. Ross:

In a letter dated January 23, 1985 (file No. 811826), addressed to you, our New York office ruled that a play-quilt is classifiable under the provision for articles not specially provided for, of textile materials: ornamented, other, of man-made fibers in item 386.13, Tariff Schedules of the United States (TSUS).

The sample was described in the referenced ruling "as a child's play-quilt designed to be used on the floor for a child to play with. The label on the representative sample indicates that the material is man-made fibers. There are four printed sections of cartoon characters in the center of the quilt. Each section has an article sewn onto it. One section has a circular print fabric with a squeaker toy underneath it, a second section has a circular textile fabric sewn on for decoration, the third has a mirror sewn on, and the last has a plastic ring sewn to it."

The rationale for classification of this merchandise under item 386.13, TSUS, was based on an observation that the play value of the quilt is subordinate to the functional aspect of serving as a protective floor covering for a young child.

Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, provides that "For the purposes of the tariff schedules, a '<u>toy</u>' is any article chiefly used for the amusement of children or adults."

We have reconsidered our rationale in this matter and are now of the opinion that the functional aspect of the play-quilt is subordinate to its play value. In view of the fact that the merchandise is chiefly used for the amusement of children, it is classifiable under the provision for other toys not specially provided for in item 737.95, TSUS. The duty rate is determined by the country of origin. Products of most favored nations are dutiable at the rate of 8.3 percent ad valorem with certain duty concessions for developing countries.

Sincerely,

George White
Altra Corporation
Two Executive Drive
Fort Lee, New Jersey 07024

Dear Mr. White:

Your letter of December 12, 1985, concerns the classification and rate of duty of an alkylbenzene/ethylalcohol blend from a country entitled to benefits under the Generalized System of Preferences (GSP). It is assumed that you are referring to a mixture to be used for fuel purposes.

It is your opinion that a blend containing 5.5 or 7 percent alkylbenzenes and 94.5 or 93 percent ethanol should be classifiable as a benzenoid mixture in item 407.16 and, thus, eligible for duty-free treatment, since item 407.16 is a GSP item.

A mixture of ethanol and alkylbenzenes, with the alkylbenzene content in an amount equal to 7 percent or more by weight of the entire mixture is classified in item 407.16, TSUS. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The highest applicable rate would be under item 427.88/901.50 at 3 percent ad valorem plus 60 cents per gallon. If a product of a country eligible for GSP benefits, such a mixture would be duty free if all the requirements are met.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Donald Mendoza
Minerva Overseas Corporation
55 West 39th Street
17th Floor
New York, New York 10018

Dear Mr. Mendoza:

You have inquired as to the dutiable status of imported fabric, hand woven in India, 45 percent by weight of cashmere yarn of U.S. origin, 55 percent silk originating in Mainland China. The fabric is 44/45 inches in width, in chief value of cashmere, and unfinished at the time of importation into the United States from India. A small swatch of the fabric was sent to us for examination.

All articles imported into the United States are subject to duty under the Tariff Schedules of the United States unless specifically exempted. There is no provision in the tariff schedules that would authorize any exemption or allowance in duty for the fabric in question. It is fully dutiable as a woven fabric of wool, since you state it will be in chief value of cashmere. Since it is 30 inches or over in width, if valued over $2.00, but not over $9.00, per pound, it would be classified under item 336.62, dutiable in 1986 at 24 cents per pound plus 38 percent ad valorem. If valued over $9.00 per pound, it would be classified under item 336.64, dutiable in 1986 at 6 cents per pound plus 33.8 percent ad valorem. It is highly unlikely that the fabric would be valued at less than $2.00 per pound.

Section 12.130 of the Customs Regulations, 19 CFR section 12.130, provides that a textile product that consists of materials produced or derived from, or processed in, more than one foreign country shall be a product of that country where it last underwent a substantial transformation, that is, where a new and different article of commerce emerged as a result of substantial manufacturing or processing operations. The weaving or otherwise forming of fabric will usually constitute a substantial transformation. Hence the fabric will probably be a product of India. Since fabric classified under both item 336.62 and item 336.64 falls within the textile category 410, a visa from the government of India would be required.

Sincerely,

District Director of Customs
2039 Federal Office Building
909 First Avenue
Seattle, Washington 98174

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3001-4-000167

This protest was filed against your decision in the liquidation on February 10, 1984, of entry No. 83-934627-8 dated February 8, 1983.

FACTS:

Certain textile/leather upper athletic shoes were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that these athletic shoes should have been classified under the provision for other footwear of leather for men, youths and boys in item 700.35, TSUS.

As support for the claimed classification under item 700.35, TSUS, the protestant asserts that the legislative history indicates that in adopting the language in the current tariff schedules of "footwear of leather," in item 700.35, TSUS, Congress intended to eliminate the chief value requirement which had been provided for in paragraph 1530(e), Tariff Act of 1930, as amended. Alternatively, the protestant claims that the subject footwear is in chief value of leather based on its submitted cost breakdown.

MAY BE RELEASED TO THE

D8

077614

ISSUE:

(1) Does the legislative history to the footwear provisions show that Congress intended to eliminate the chief value requirement for classification under item 700.35, TSUS?

(2) Is Customs required to accept the cost breakdown submitted by the protestant?

LAW AND ANALYSIS:

The protestant's contention that the omission of the chief value requirement in item 700.35, TSUS, indicates a change in Congessional intent is without merit. The body of the tariff schedules is preceded by a section entitled "General Headnotes and Rules of Interpretation." That the General Headnotes and Rules of Interpretation do not represent a change in the interpretation of the term "chief value" is indicated by the following passage in the Tariff Classification Study Submitting Report:

> The General Headnotes and Rules of Interpretation to the proposed revised schedules constitute an innovation in connection with the tariff classification laws, there being no set of provisions in the present tariff structure. As is generally true with related matters in the existing Customs laws, the substance of most of the proposed headnotes and rules is contained in scattered statutory provisions and in practices based on established administrative and judicial precedent.

General Headnote 9(f)(i), TSUS, defines the term "of" as meaning that the article is wholly or in chief value of the named material. The protestant's reference to the case of Magnesium Elektron, Inc. v. United States, 50 Cust. Ct. 71, C.D. 2391 (1963), is not germane because this case involved the interpretation of certain paragraphs under prior acts and not the tariff provisions under the Tariff Schedules of the United States.

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has

D9

THIS DOCUMENT MAY BE RELEASED TO THE

evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, relating to cost breakdowns was that importer submitted data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

The cost breakdown submitted by the protestant states that the average quantity of leather in each pair of shoes is 2.074 sq. ft. The Customs laboratory report shows 0.8 sq. ft. for size 2 1/2 shoes and 1.0 sq. ft. for size 10 1/2 shoes. The unit cost for leather in the shoes is stated to be $0.598 per sq. ft. That unit cost, if accurate, when applied to the quantity of leather found by laboratory analysis in size 10 1/2 shoes, would result in a total cost of leather for these shoes of $0.79 per pair assuming a waste of 0.311 sq. ft. per pair (the waste shown on the breakdown) or a cost of $0.84 per pair assuming a waste of 0.4 sq. ft. per pair (the waste estimated by the import specialist). In either case, the cost of the leather would be considerably less than the cost of the rubber and plastics shown on the breakdown. The disparities in costs would be comparable or greater for size 2 1/2 shoes.

The fact that the shoes have less than one half the leather that the maker claimed to be present is sufficient "tangible evidence" to enable us to categorically state that the cost breakdowns are false in view of the inability of the protestant to plausibly explain the discrepancy.

RELEASED TO THE

D10

HOLDING:

The footwear involved was properly classified as liquidated under item 700.95, TSUS. The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: MAR - 6 1986

FILE: CLA-2 CO:R:CV:G
077616 JAS

077616

TO : District Director of Customs
Seattle, Washington 98174

FROM : Director, Classification and Value Division

SUBJECT: Classification of the Book States of War

This is in further reference to our memorandum of October 18, 1985 (076354), to which you responded on December 24, 1985 (CLA-2 SE:C:DA-12)

Initially, we incorrectly assumed that the importer had challenged your proposed classification and had argued that classification should be in item 270.25. It is now clear that your original request was limited to the narrow issue of whether printing by offset is considered lithography for tariff purposes. The letter from the importer, dated December 6, 1985, appears to support your (and our) position inasmuch as it is now clear that a flat plate was used in the printing process. In this context, printing by offset is clearly lithographic for tariff purposes. We were, however, unable to comment on the broader classification issue inasmuch as the sample book was unavailable.

Having now received and examined the book, there are statements in our October 18 memorandum which require clarification. The submitted sample, States of War, is a bound compilation of 44 lithographs from European and American artists, each having a caption listing author, date and city of birth, title of the work, and sending gallery. In addition, the compilation contains signed acknowledgments and a forward, each 1 page long, and a 10 page unsigned introduction. The introduction defines a central theme which the lithographs attempt to portray, that of "...the complex cultural and spiritual dilemmas of a post-industrial nuclear age." The introduction attempts to interpret many of the lithographs as the artists' portrayals of the various emotional, social and political issues integrating expressions of power, violence, anguish, and changing sexual rolls in modern society.

Attached for your information and future guidance are Protest Review Decision, dated May 5, 1983 (072090), and our letter of August 20, 1985 (076794). You will note that the "essentially textual" criteria which had traditionally governed classifications in item 270.25, TSUS, and to which we alluded in our October 18, 1985, memorandum, was effectively repealed by the Florence Agreement, 17 U.S.T. 1835, T.I.A.S. No. 6129 (1966), and no longer represents Customs position in such matters. The Florence Agreement amendments essentially expanded the scope of the basket provision for books, in

D12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

item 270.25, TSUS. As indicated in our August 20 decision,"... the Florence Agreement implementation has expanded the provision for books to include articles which are 'less than essentially textual' and which are pictorial." See also paragraph 1, p. 4 of our May 5, 1983, decision. Thus, the real issue here is whether, despite the obvious pictorial content in States of War, the textual content may be viewed as more than incidental, thus warranting classification as a book. Because of the nature of the involved tariff provisions, particularly in view of the expanded scope of the provision for books in item 270.25, TSUS, Customs officers in the future will be required to make this determination on a case-by-case basis.

We have previously held that captions and indexes do not normally control classification. See p.2 of our August 20 decision. The 63 page compilation States of War depicts 44 lithographs which, standing alone, are difficult to interpret, at best. The unsigned introduction defines the various styles and techniques of many of the artists, and contains pointed interpretations of many of the lithographs, the emotions, social statements, and complexities of life in general each artist is attempting to depict. It is our opinion that the introduction in this instance is more than an incidental feature and that there is sufficient thematic integration of the text to warrant classification under the provision for books, not specially provided for, in item 270.25, TSUS. Copies of the cited decisions are attached.

Mr. Charles Belner
R. H. Macy Corporate Buying
47 West 34th Street
New York, New York 10001

Dear Mr. Belner:

We have been asked to reconsider that portion of New York Ruling 815159, of October 21, 1985, that determined that style 1023, women's tap pants manufactured from 100 percent polyester woven fabric, is properly classified under item 384.9497, TSUSA, as other women's wearing apparel.

The proper classification for this article is under item 378.6530, TSUSA, in textile category designation 652, as underwear, not ornamented, of man-made fibers, not knit. The appearance and structure of the tap pants indicate that they are chiefly used as underwear, worn under an outer garment and thus concealed in normal use.

The 1986 rate of duty for item 378.65 is two cents per pound plus 8.5 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Joseph A. Savoca
International PetChemco Inc.
101 Park Avenue
New York, New York 10178

Dear Mr. Savoca:

Your letter of January 16, 1986, concerns the dutiable status of an ethanol mixture. You state that you are interested in importing a mixture of 80 percent ethanol, 12.5 percent toluene and 7.5 percent xylene, or any xylene isomers including ethylbenzene, under item 407.16, TSUS.

Before a mixture of this type would be classifiable as a benzenoid mixture in item 407.16, TSUS, the ethylbenzene content would have to be known. An ethanol mixture containing ethylbenzene in an amount equal to 7 percent or more of the entire mixture by weight would be classifiable in item 407.16, TSUS. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. The highest component rate would apply to ethanol under item 427.88/901.50. The rate of duty is 3 percent ad valorem plus 60 cents per gallon. Chemical mixtures classifiable in item 407.16, which are products of a country entitled to benefits under the Generalized System of Preferences (GSP) may be free of duty if all the requirements are met.

A mixture of 80 percent ethanol with toluene and xylene added where the ethylbenzene content is less than 7 percent by weight would be classified as a chemical mixture in item 432.10, TSUS. The rate of duty is 5 percent ad valorem but not less than the highest rate applicable to any component material. The applicable rate of duty in this case would be that for ethanol in item 427.88/901.50 at 3 percent ad valorem plus 60 cents per gallon.

Sincerely,

Harvey B. Fox

Miami, Florida 33143

Dear Ms. Pevsner:

Your letter of January 3, 1986, concerns the dutiable status of mixed xylenes.

You state that the mixed xylenes which your client proposes to import may contain as much as 50 percent ethylbenzenes by weight. Mixed xylenes which contain over 25 percent ethylbenzene by weight are classified as benzenoid mixtures in item 407.16, TSUS. Since the value of xylenes fluctuates, they may be dutiable under the applicable rate for item 407.16, 1.7 cents per pound plus 13.6 percent ad valorem, or the highest component rate, that for alkylbenzene in item 402.36, TSUS, of 0.6 cent per pound plus 17.3 percent ad valorem.

Chemicals classifiable under item 407.16, TSUS, which are products of countries eligible for GSP benefits are entitled to duty-free status if all the requirements are met.

Sincerely,

Arthur P. Schaffner

Dear Mr. Powell:

This is in response to your letter of January 13, 1986, in which you explain that you will be importing into the United States two miniature rooms for a showing at the International Guild of Miniature Artisans Exhibition in New York and then exporting this merchandise from the United States within a period of ten days.

You inquire about entering the merchandise and posting a bond of 10.2 percent under item 737.1560/960.70. You may make a consumption entry for the merchandise using this procedure. This is permitted by Customs in view of the impending legislation by Congress that would make certain of the special duty-free provisions permanent. However, Customs cannot determine when or if this legislation will pass. The posted bond money will not be returned to you until the legislation is enacted.

These model rooms may be temporarily admitted free of duty under bond if exported within one year from the date of their importation. Under this procedure, the merchandise is classifiable as samples solely for use in taking orders for merchandise, in item 864.20, Tariff Schedules of the United States (TSUS).

The procedure for entering this merchandise temporarily imported under bond is contained in 19 CFR 10.31, Customs Regulations, a copy of which is enclosed for your review.

Sincerely,

Arthur P. Schaffner

Ms. Katherine G. Marchetti
Dietary Specialties, Inc.
P.O. Box 227
Rochester, New York 14601

Dear Ms. Marchetti:

Your request of December 27, 1985, to our New York office for an exemption from the additional duty on pasta products imposed by Presidential Proclamation 5354, has been referred to our office for direct reply to you.

The merchandise which is the subject of your request is low protein macaroni products, " Aproten Low Protein Imitation Macaroni Products", made from corn starch and tapioca starch, and classifiable under the provision for macaroni, noodles, vermicelli, and similar alimentary pastes, not containing egg or egg products in item 182.35, Tariff Schedules of the United States (TSUS). Customs has determined that these products are considered alimentary pastes and are therefore similar to other macaroni products, even though the flour or starch used in manufacturing is different. This determination is based upon considerations of commercial interchangeability, adaptability to substantially the same uses, and that these products are indeed so used as typical wheat flour based macaroni and macaroni products.

Presidential Proclamation 5354 dated June 21, 1985, imposed a duty rate increase to 40 per cent ad valorem for pasta products, from member states of the EEC, not containing egg or egg products.

We have considered the reasons listed in your request for an exemption. However, the Presidential Proclamation encompasses all macaroni products and does not grant us discretion in assessing the duty.

E4

Therefore, the merchandise subject to your inquiry, classifiable in item 182.35, TSUS, as macaroni, noodles, vermicelli, and similar alimentary pastes, not containing egg or egg products, is subject to the duty of 40 percent ad valorem.

Sincerely,

Arthur P. Schaffner

District Director of Customs
101 E. Main Street
Norfolk, Virginia 23510

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1401-4-000251

This protest was filed against your decision in the liquidation on October 12, 1984, of Entry No. 84-127421, dated February 16, 1984, covering merchandise described as paper boxes covered with textile fabric.

FACTS:

The merchandise involved in this application for further review consists of paper boxes covered or lined with textile fabric. The invoice covering the shipment described the merchandise as "Brocade Boxes". The boxes were classified as other articles, not ornamented, of silk, not specially provided for, in item 389.30, Tariff Schedules of the United States (TSUS). Protestant claims that the boxes are specifically provided for in item 256.48, TSUS, as boxes of paper, covered or lined with textile fabric.

ISSUE:

Whether the brocade box is classifiable as boxes of paper covered or lined with textile fabric, in item 256.48, TSUS, or other articles, not ornamented, of silk, not specially provided for, in item 389.30, TSUS.

E6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077695

LAW AND ANALYSIS:

Headquarters Ruling 074854, dated September 19, 1984, addresses the above issue and the principles stated in that ruling will be adhered to in this case.

Because of the context, the meaning of the term "of" does not mean "in chief value of". Although the chief value of these boxes is the textile covering or lining, the merchandise remains specifically described in item 256.48, TSUS.

HOLDING:

Thus, the paper boxes are classifiable in item 256.48, TSUS, as boxes of paper, covered or lined with textile fabric.

You should allow the protest. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Mr. Mark J. Laumann
Fritz Companies, Inc.
7550 22nd Avenue South
Minneapolis, Minnesota 55450

Dear Mr. Laumann:

Your letter dated August 2, 1985, on behalf of Republic Airlines, Inc., requesting the tariff classification of a disposable pillowcase has been referred to Customs Headquarters for a response. A sample pillowcase was submitted with your request.

The rectangular pillowcase measuring approximately 13 inches by 17-3/4 inches is manufactured from a nonwoven polyester fabric. Three edges of the fabric have been glued together, thereby permitting a pillow to be inserted into the opening along the remaining side. You state that the chief use of the article is to cover pillows used on commercial aircraft.

The issue raised by this request concerns whether the pillowcase is described by the term "furnishings" in Headnote 1, Subpart C, Schedule 3, Tariff Schedules of the United States (TSUS) which provides:

<u>Subpart C Headnote</u>:

> 1. For the purposes of this subpart, the term "furnishings" means curtains and drapes, including panels and valences; towels, napkins, tablecloths, mats, scarves, runners, doilies, centerpieces, antimacassars, and furniture slipcovers; and like furnishings; all the foregoing, of textile materials, and not specially provided for.

It is clear that the pillowcases do not fall within the named articles in the headnote. Therefore, the question is whether the subject pillowcase is embraced by the words "like furnishings".

E8

In this regard, Customs has classified automobile and airplane seat covers under the provisions for textile furnishings. See ORR Ruling 77-0150 dated December 30, 1977.

The pillowcase at issue fits squarely within the above definition and is classifiable as an unornamented furnishing in item 367.60, TSUS.

Sincerely,

Harvey B. Fox

Ms. Michelle Holmes
The Craft Trading Company
132 East Carrillo Street
Santa Barbara, California 93101

Dear Ms. Holmes:

Your letter dated December 5, 1985, addressed to our New York office concerning the dutiable status of an item described as "a backpack which has the appearance of a plush stuffed animal," has been referred to this office for a direct response to you. A sample was submitted for examination.

The merchandise is to be imported in two sizes, 19 inches and 25 inches. The sample submitted is the small size and consists of a stuffed head, arms, and legs with an empty torso. The body cavity forms the pack which measures approximately 14 inches by 7 inches. The pack has standard backpack harness straps and hardware permanently affixed to the arms and legs. There is a standard backpack pick-up loop sewn to the underside of the animal head. The pack portion is lined with rayon satin and the exterior is manufactured of man-made fiber pile fabric.

You have submitted advertising literature which reads "The pet backpack is perfect for children 6 to 16, soft, lovely, furry, zippered back, for school, camping or anywhere you need a cuddly companion."

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), Tariff Schedules of the United States (TSUS), provides in pertinent part that "For the purposes of the tariff schedules - (a) the term 'luggage' covers (i) travel goods such as *** knapsacks, *** and like articles designed to contain clothing or other personal effects during travel."

Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, provides that "For the purposes of the tariff schedules, a 'toy' is any article chiefly used for the amusement of children or adults."

General Interpretative Rule 10(e)(i), TSUS, provides that "a tariff classification controlled by use (other than actual use) is to be determined in accordance with the use in the United States at, or immediately prior to, the date of importation, of articles of that class or kind to which the imported articles belong, and the controlling use is the chief use, i.e., the use which exceeds all other uses if any combined."

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The issue presented is whether the sample animal backpack is chiefly used for the amusement of children or adults. If so used it would be considered a toy for tariff purposes. If not so chiefly used, it would be considered luggage for tariff purposes.

In a recent decision this office had occasion to rule as to the dutiable status of a Koala "candy bear" which was in chief value of man-made textile materials and measured approximately 12 inches in height. The head, arms and legs of the bear were stuffed but the body cavity was empty. The bear was dressed in overalls which formed the bottom half of the torso with plush fabric forming the top half. The hollow body cavity of the bear formed an interior compartment while a zipper closure across the front of the bear secured the lined compartment and a smaller pouch therein. Adjustable textile tape harness straps were attached to the rear of the overalls at the seam and at the back of the stuffed head to form armholes.

In reaching the conclusion that the "candy bear" is a toy for tariff purposes, this office took the position that the utilitarian aspect of the merchandise was incidental to its play value for the following reasons:

(1) The "candy bear" is so small as to be confined to use by 2 to 5 year old children,

(2) the amount of storage space is minimal;

(3) the "candy bear" is in fact a plaything and can provide frivolous amusement to the users. See United States v. Topps Chewing Gum, Inc., 58 CCPA 157, C.A.D. 1022 (1971). Wilson's Customs Clearance, Inc. v. United States, 59 Cust. Ct. 36, C.D. 3061 (1967); and

(4) as a practical matter the candy bear would not be chiefly used as an article of utility i.e., for the users to carry their personal belongings during travel.

In the case of Ideal Toy Corp. v. United States, 78 Cust. Ct. 28, C.D. 4688 (1977), the court made the observation that when amusement and utility become locked in controversy, the question becomes one of determining whether the amusement is incidental to the utilitarian purpose, or the utility purpose incidental to the amusement.

It is our observation in this instance that although the novelty backpack does have some play value, it is incidental to its utilitarian function for the following reasons:

(1) The novelty backpack is purposefully designed to be a functional backpack;

(2) the lack of stuffing in the torso renders the article less like a fully stuffed animal and more like a backpack;

E11

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

(3) the absence of any filler material causes the article to collapse thus lessening its play value; and

(4) the carrying capacity of the cargo compartment would allow one to carry large items.

In view of the foregoing, it is our position that the novelty backpack is classifiable under the provision for luggage of other textile materials in item 706.4144, TSUS, and dutiable at the rate of 20 percent ad valorem. The applicable textile quota number is 670. As a product of Taiwan this merchandise would be subject to textile quota restraints.

This merchandise may be subject to the requirements of the Textile Fiber Products Identification Act. For further information it is suggested that you direct an inquiry to the Federal Trade Commission, 6th and Pennsylvania Ave., N.W., Washington, D.C. 20580.

There are no special requirements for labelling this merchandise other than country of origin labelling requirements.

For your information there is enclosed a copy of section 12.130f, Customs Regulations, concerning manufacturer's declarations which is self-explanatory.

Sincerely,

Arthur P. Schaffner

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: 14 MAR 1986

FILE: CLA-2 CO:R:CV:G
077715 JGH

077715

TO : Regional Commissioner of Customs
Chicago, Illinois 60603

FROM : Director, Classification and Value Division

SUBJECT: Application to Imported Ethanol of the End Use Provisions Set Forth in the Law and Regulations; Your Memorandum of January 24, 1986 (AUD-1-O:A:C JPN)

Your memorandum raises questions as to the authority of Customs to respond with appropriate enforcement measures when ethanol or ethanol mixtures dutiable under item 427.88, TSUS (either directly or by application of the highest-component-rate scheme invoked with respect to certain mixtures containing ethanol) are diverted to a use inconsistent with the nonfuel use claimed in entry declarations.

It is Customs position, which has been affirmed judicially, that a provision such as item 901.50, TSUS, imposes a reciprocal actual use requirement on its antecedent provision, in this case item 427.88, TSUS, requiring that the two provisions be read together. Humphrey & MacGregor, Inc. v. United States, 61 Cust. Ct. 162, C.D. 3555 (1968). Accordingly, a claim that a reduced rate of duty applies to imported nonbeverage ethanol -- that is, the rates of duty imposed by items 427.88 and 901.50 together less the rate imposed by item 901.50 (or, stated otherwise, that only the duty imposed by item 427.88 applies) -- is subject to the actual use requirements and procedures set forth in General Headnote 10(e)(ii), TSUS, and sections 10.131-10.139 of the Customs Regulations.

General Headnote 10(e)(ii), TSUS, provides that the actual use specified in the tariff provision for entitlement to duty-free or reduced-duty treatment is established only when

> *** such use is intended at the time of importation, the article is so used, and proof thereof is furnished within 3 years after the date the article is entered ***.

The 3-year period specified is the maximum period afforded to an importer to submit proof that merchandise (in this case, ethanol) has been used in a manner consistent with the entry declaration, i.e., that the ethanol was not used as or in fuel, as described in item 901.50, TSUS. If such proof is not submitted within that period, the entry is to be liquidated as fully dutiable, with the understanding that the subsequent submission of the required proof will not entitle the importer to a

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E13

remission or refund of the additional duties imposed. Czarnikow-Rionda Company v. United States, 66 Cust. Ct. 431, C.D. 4229 (1971); 60 CCPA 6, C.A.D. 1071 (1972). The 3-year period does not operate to permit an importer to delay reporting to Customs that ethanol entered for nonfuel use was used as or in fuel.

When a diversion (i.e., to fuel use) occurs, the time limit ceases to have any significance and an immediate application of the laws and requirements relating to ethanol imported for fuel use is appropriate. Importers are under an obligation to notify Customs promptly of any such diversion, of any use which is inconsistent with that stated in the entry declaration, or of any event which materially impacts any statement made in that declaration. When a diversion occurs which is inconsistent with the use specified in the entry declaration, the latter becomes a false statement subjecting the importer to possible civil and criminal liability unless immediately corrected. In this regard, 19 U.S.C. 1485(a)(4) imposes an affirmative obligation on every consignee to correct its entry documents upon learning that statements contained therein are not true or correct.

The 3-year period in no way acts as a bar to an inquiry during that period by Customs, on its own initiative, into the end use or other status of the imported ethanol. Just as Customs has the authority and obligation to liquidate promptly at the higher rate when it is advised of a diversion by the importer, so it must also liquidate promptly at the higher rate when a diversion is discovered through an independent investigative initiative. In the latter event, however, consideration should be given to the assessment of any penalties which may be appropriate.

Any proof of use filed by the importer within the 3-year period must be conclusive and unequivocal, precluding the possibility of any diversion after that period.

On September 25, 1985, we issued instructions to the field regarding the content of the declarations of intent required to be filed at the time of entry in an effort to produce statements which credibly and unambiguously established that the ethanol to which they relate is entitled to entry at the reduced rate. The declarations require knowledge of the end use of the merchandise and may be considered fraudulent if the importer claims to be the end user but cannot demonstrate that he possesses the capability of using the ethanol in the manner claimed; similarly, an importer who is not the end user of the ethanol cannot claim knowledge of end use without providing the identity of the end user and demonstrating that the latter possesses the capability of using the ethanol in the manner claimed. Our instructions of September 25, 1985, were designed to ensure the protection of the revenue to the greatest extent possible, but were not meant to abridge the discretion of the district director to require an importer to provide whatever information he deems appropriate (whether more or less than that specified in our instructions) to ensure that the tariff provisions are properly applied and the duties due the Government are collected. We

MAY BE RELEASED TO THE PUBLIC

E14

believe, however, that a strong declaration upon entry enhances the chances of success of any penalty action initiated pursuant to a subsequent diversion not promptly reported to Customs.

In the case of warehouse entries, the declaration of use is properly filed at the time the withdrawal for consumption is made and the proof of use is due not later than 3 years from that date. However, neither this period nor the period permitted for warehousing (5 years) acts to preclude the District Director from requiring whatever evidence is necessary in order to determine duty liability or to assure that the revenue is protected.

Your memorandum suggests that the 3-year period provided for in General Headnote 10(e)(ii), TSUS, and the implementing regulations are being misapplied with respect to ethanol imported by Union Carbide. The increased duties should be assessed immediately upon

(1) a partial withdrawal from warehouse for consumption for use as fuel,

(2) any identified diversion to fuel use occurring within 3 years of withdrawal, or

(3) any identified diversion to fuel use while warehoused (e.g., unauthorized removal and use as fuel),

on any quantity of ethanol so withdrawn and/or identified as having been diverted.

With regard to your comment in the penultimate paragraph of your memorandum suggesting that the regulations be amended to require that the end user, rather than the importer, be responsible for maintaining records regarding the use or disposition of the imported ethanol, we believe that this obligation is properly that of the importer since it is the importer who enjoys the benefit of reduced duties upon entry and will bear the burden of any increased duties in the event proof of use consistent with reduced-duty status is not filed within the period permitted. Your perceived problems in this area stem from the misconception that "the importer will meet the requirements of the regulations by providing proof of shipments to other ethanol processors." As previously noted, such "proof" is clearly deficient as proof of nonfuel use and will not entitle the importer to avoid the imposition of the increased duties. The nature of the proof demanded should be such as to effectively guarantee that there will be no subsequent diversion of the ethanol to fuel uses.

We hope this information is helpful to you.

Harvey B. Fox

Mr. Alamgir S. Shaikh, VP
Sidko International, Inc.
Importers, Exporters & General Merchandiser
P.O. Box 47776
Doraville, Georgia 30362-0776
Attn: Mr. Alamgir S. Shaikh, VP

Dear Mr. Shaikh:

Your letter dated June 26, 1985, addressed to our New York office requesting a ruling for tariff classification purposes on towels from Pakistan, has been referred to our office for direct reply to you.

It was necessary to reconstruct your file and to duplicate the documents contained in it. As a result, we were unable to review the sample you submitted. However, based upon the description our New York office provided to us, we have found the towels which measure 25.25 by 14.5 inches, to be manufactured from plain unprinted cotton terry towelling material. The towels, as described above, are, in our view, primarily used in the United States as hand towels.

The towels are classifiable under the provision for towels, of cotton, of pile or tufted construction, and if valued not over 45 cents each, in item 366.1965, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the 1986 rate of 11.1 percent ad valorem. If valued over 45 cents each and valued not over $1.45 per pound, then the towels are classifiable in item 366.2260, TSUS, at the duty of 13.6 cents per pound. If valued over 45 cents each and valued over $1.45 per pound, the towels are classifiable in item 366.2460, TSUS, dutiable at the 1986 rate of 11.1 percent ad valorem.

F2

These towels may be subject to visa, export license, or quota restraints applicable to textile category 363. Due to frequent changes in the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox

Mr. John Casanas
J. M. Rodgers Co., Inc.
90 West Street, Room 1510
New York, New York 10006

Dear Mr. Casanas:

You have requested a tariff classification ruling for children's shoes, Pattern No. BG-060, to be made in Hong Kong and imported by Childcraft Footwear Corporation.

The merchandise is a child's all-plastic jogger-type shoe with a four-eyelet U-throat, padded collar, and cemented wedge-type unit molded outsole that overlaps the upper at the toe and heel. The determinative question for classification purposes is whether the shoe has a foxing-like band applied or molded at the sole and overlapping the upper.

A foxing-like band requires, among other points, a vertical overlap of one-fourth inch or more encircling or substantially encircling the entire shoe. While the unit molded sole on Pattern No. BG-060 overlaps the upper by about a 1/2 inch in the extreme toe and heel areas, it overlaps the upper by less than 1/8 inch everywhere else. Hence this shoe is not considered to have a foxing-like band, and it is properly classified under item 700.56, Tariff Schedules of the United States.

Sincerely,

Arthur P. Schaffner

for Harvey B. Fox
Director, Classification
and Value Division

077764

Ms. Judy L. Cook
Manager, Import Dept.
Pagoda Trading Company, Inc.
44 Kimler Drive
St. Louis, Missouri 63043

Dear Ms. Cook:

In a letter dated February 3, 1986, you inquired as to the dutiable status of a woman's casual shoe manufactured in Taiwan. A sample has been submitted for examination.

The sample, style BRN-555, is a woman's closed-toe, closed-back, slip-on, causal shoe consisting of a plastic upper, a wood wedge, and a plastic outsole. There is a textile "mudguard" strip cemented to the front portion of the upper. This strip extends from underneath the upper (between the upper and the outsole) to a point on the upper 3/8 inch above the sole. There is a wrap around the wedge made of the same textile which also extends up to a point 1/8 inch above the sole, and is cemented to the upper.

Item 700.56, Tariff Schedules of the United States (TSUS), provides for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which over 90 percent of the exterior surface area is rubber or plastics (except footwear having foxing or a foxing-like band applied or molded at the sole and overlapping the upper).

The issue presented is whether the shoe possesses foxing or a foxing-like band which would preclude its classification under item 700.56, TSUS. It should be noted that the Customs Service published a notice in the Federal Register of May 23, 1983 (48 FR 22904), setting forth its position as to what constitutes foxing or a foxing-like band.

In the referenced ruling Customs took the position that:

(1) a mudguard may meet the definition of a foxing; and

(2) a foxing or foxing-like band must encircle or substantially encircle the entire shoe.

FS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

An examination of the sample reveals that the textile "mudguard" encircles less than 50 percent of the perimeter of the shoe. It is our view that the encirclement of the perimeter here does not constitute a substantial encirclement of the shoe so as to qualify the "mudguard" as foxing or a foxing-like band.

In view of the foregoing it is our position that the sample shoe is dutiable at the rate of 6 percent ad valorem under item 700.56, TSUS, provided that plastic constitutes over 90 percent of the exterior surface area of its upper.

Sincerely,

Arthur P. Schaffer

Mr. Richard G. Lamb
President
Windsurfing Hawaii, Inc.
120 Santa Barbara St.
Santa Barbara, California 93101

Dear Mr. Lamb:

In your letters dated December 13, 1985, you inquired as to the dutiable status of certain windsurfing articles produced in Hong Kong and Taiwan.

The merchandise involved is described as follows:

(1) Harness - The harness is worn by sailors and allows them to hook in to a line on the boom of a sailboard. It is made of non-rip woven nylon fabric and foam padding. It has heavy duty-nylon webbing and adjustable buckles which lock into position while sailing. It is presumed the component material of chief value is the nylon fabric. Across the body of the harness is printed the inscription "windsurfing hawaii" in white letters and above the inscription is printed in white a wave and sailing logo. This entire inscription and logo measure approximately 8 inches long. Extending from the outside seam on the right side of the harness is a woven label, 1-1/2 inches by 1 inch bearing the "windsurfing hawaii" inscription and logo.

(2) Base Pad - The Base Pad is used on fiberglass boards. It is fastened to the mast base and normally left there permanently except for long-term storage or cleaning. The pad has a pouch for storing line, car keys and other essentials. The base pad measures approximately 10 inches long by 16 inches high, made of non-rip woven nylon fabric and heavy duty nylon webbing with velcro closures and plastic buckles.

Across the pouch on the pad is printed in white letters the inscription "windsurfing hawaii" and above the inscription is printed in white a wave and sailing logo. This entire inscription and logo measure approximately 6-1/2 inches long. Along the side of the pouch is a woven textile label 1-1/2 inches by 1 inch bearing the "windsurfing hawaii" inscription and logo.

(3) Boom Strap - The boom strap is affixed to the boom, usually permanently or until it wears out, to attach harness lines to the boom. It is made of 1-1/2 inch woven nylon webbing with velcro closures, plastics buckles and metal ring. It is presumed the component material of chief value is the nylon webbing. Sewn on the boom strap is a woven label approximately 1-1/4 inches long by 1/2 inch wide. It has a white background and red sailing logo.

F1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(4) Speed Seat - The speed seat is used in conjunction with the harness to enhance its function. It is made of woven nylon fabric with nylon webbing and plastic buckles. The seat is a V-configuration measuring approximately 24 inches long and 7 inches wide at the center. It has 2 woven textile labels on the seat. Each label has the "windsurfing hawaii" inscription and wave and sailing logo. One label, measuring 1-1/2 inches by 1 inch, (folded to 1 inch by 1 inch) protrudes from the right seam.

(5) Boom End Pad - No sample was submitted.

(6) Safety Belt - This is used as a safety device in case of the failure of the universal joint. It is permanently affixed to the mast foot of the board. It is a circular 1-1/2 inch wide nylon webbing with a diameter of 4 inches. It has sewn on it a 1-1/2 inch by 3/4 inch woven label with the "windsurfing hawaii" inscription and wave and sailing logo.

(7) Sail Bag - This is used to carry fully battened sails when unrigged from the mast and boom. These bags are necessary for the proper stowage of sails to prevent batten warpage and damage to the sail fabric.

(8) Extension Bag - This is used to carry spare boom extensions.

Both items 7 and 8 are nylon carry bags similar to duffel bags. They have a nylon drawstring closure which is locked by means of a cord lock. Each is carried by means of a side woven polypropylene handle.

(9) Pully Hook Cover - This item protects the aluminum booms and bases from damage from the steel pulley hook while sailing. It is permanently affixed to the outhaul and downhaul pulley hooks. It is a knit fabric-covered foam cover with a 1 inch by 2 inch woven label bearing the "windsurfing hawaii" inscription and wave and sailing logo. It is presumed the knit fabric is composed of man-made fibers, and is the component material of chief value.

You have asked if the windsurfing items can be considered boat parts for tariff purposes. It is to be noted that sailboards (also called windsurfers) are considered to be pleasure boats. There is a statistical suffix for them under the provision for pleasure boats valued not over $15,000 each in item 696.0545, Tariff Schedules of the United States (TSUS). Combined parts are classifiable under item 696.15, TSUS.

General headnote 10(ij), TSUS, states that "a provision for 'parts' of an article covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such part." In the case of Victoria Distributor, Inc. v. United States, 57 CCPA 80, C.A.D. 980 (1970), the court interpreted this headnote to mean that an article could be a part if it were solely or chiefly used with the article and aided in the safe or efficient operation of the main article.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077782

Articles 1 through 4 (sample of item 5 was not submitted), 6 and 9 clearly appear to aid the safe and efficient operation because they keep the user from falling off, aiding the user's ability to steer and maintain control. They also serve to prevent damage to the sailboard. It is our position that these articles are chiefly used as parts of sailboards which requires their classification under the provision for parts of pleasure boats in item 696.15, TSUS, with duty at the rate of 4.4 percent ad valorem or entitled to duty-free treatment under the Generalized System of Preferences, if otherwise qualified.

Items 7 and 8 are classifiable under the provision for luggage of textile materials, other, in item 706.4152, TSUS, and dutiable at the rate of 20 percent ad valorem. Item 706.4152, TSUS, falls within textile category 670. If a product of Taiwan, this merchandise is subject to quota and visa restrictions. If a product of Hong Kong, it is not currently subject to quota and visa restrictions.

You claim that your competitors are entering this merchandise at other ports and are being accorded more favorable rates than your merchandise. We will investigate this matter further if you will provide the names of the importers and the ports of entry involved. However, in order to alleviate this situation a copy of this letter will be circulated to all ports in order to ensure that the merchandise will be uniformily so classified.

Your samples are being returned under separate cover.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Mr. Pirkash Mirchandani
Just Class
1407 Broadway, Suite 3807
New York, New York 10018

Dear Mr. Mirchandani:

Under the authority of section 177.2, Customs Regulations, Headquarters retains authority to independently review all tariff classification ruling letters issued by the Regional Commissioner, New York Region.

In New York ruling 815399 dated October 15, 1985, a long sleeved garment manufactured from 100 percent woven cotton extending from the shoulders to below the knees and featuring a full front opening with a nine button closure, a breast pocket, and a partial rear opening with an eight button closure was classified under the provision for other women's, girls', or infants' wearing apparel, not ornamented: of cotton: not knit: other: other: other blouses, shirts,... and shorts: blouses,... and slacks, blouses with two or more colors in the warp and/or the filling: women's, in item 384.4605, Tariff Schedules of the United States Annotated (TSUSA), with duty at the rate of 16.5 percent ad valorem.

Our inspection of the subject garment leads us to the conclusion that the garment should not have been classified as a blouse. The length of the garment, its narrow silhouette, and the side seam pockets persuade us that the garment is classifiable as a dress. We consider this garment to be appropriate for wear without other garments. And, the presence of modest front and back slits does not change our position.

Thus, the garment is classifiable under the provision for other women's wearing apparel, not ornamented, not knit, dresses, other in item 384.4921, TSUS, with duty at the rate of 12.8 percent ad valorem. As a product of India, this garment requires a visa for textile category 336. New York ruling 815399 is revoked.

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Ike Matitia
International Seaway Trading Corp.
1382 West 9th Street
Cleveland, Ohio 44113

Dear Mr. Matitia:

You have requested a classification ruling for a women's plastic boot from Italy. The boot, style "Incas," approximately ten inches high, has a two-color functionally stitched plastic upper and a non-removable foam-backed synthetic fleece lining and insole. The two-color part of the upper is stitched to a white vinyl strip that is double-stitched to the outside of the unit-molded rubber/plastic cup sole. The determinative question for classification purposes is whether the boot has a foxing-like band applied or molded at the sole and overlapping the upper.

The white vinyl strip is not a foxing-like band. It is part of the upper, and where it is double-stitched to the molded bottom it is too high up to be "applied or molded at the sole." The sidewall of the cupsole is not a foxing-like band because it does not overlap the upper but lies underneath it and because there is a 1/4 inch gap between the upper edge of the white vinyl strip and the upper edge of the cupsole in which the white vinyl strip is the upper; nothing else, except the lining, covers the foot in that 1/4 inch space.

Therefore, the boot is properly classified under item 700.56, Tariff Schedules of the United States.

Sincerely,

Arthur P. Schaffer

WASHINGTON

077826

REFER TO

25 MAR 1986

CIA-2 CO:R:CV:G
077826 DW
816861

Mr. Ben Wolf
Franco Manufacturing Co., Inc.
555 Prospect Street
Meteuchen, New Jersey 08840-2293

Dear Mr. Wolf:

You have requested the tariff classification of certain terry towels that are products of Taiwan. Four samples were submitted along with your request dated January 14, 1986.

Each cotton terry towel measures approximately 25 3/4 inches by 14 3/4 inches, and features four successively larger labels. Three of the labels marked 1, 2, and 3 are identified as "Dish Towels," and have the country of origin, wash and care instructions, fiber identification, supplier's name, and RN number. The remaining label which is unmarked is the label currently used on your products.

You wish to ascertain whether a towel with a large label bearing the words "Dish Towel" would result in its classification as a terry dish towel, valued over 45 cents each and over $1.45 per pound, in item 366.2420, Tariff Schedules of the United States Annotated (TSUSA).

In a recent ruling dated February 12, 1986, file 077195, where we considered the classification of terry towels, we stated:

> The provisions for dish towels are statistical (nonstatutory) provisions. Dish towels and other towels both fall under the same statutory classification item (366.24), but dish towels are annotated separately for quota and statistical purposes. In the absence of authority to the contrary, and to maintain the continuity and general scheme of the tariff schedules, we will apply the General Interpretative Rules (General Headnote 10, TSUSA) to the statistical annotations as well as for the statutory provisions.
>
> "Dish towels" is, in effect, a use provision. General Headnote 10(e)(i) provides that in a classification controlled by use (other than actual use), it is the chief use in the United States of the class or kind of merchandise to which the imported articles belong that governs. In its condition as imported, even with the "dish towels" notation on the label, the plain white terry towel belongs to a class or kind of merchandise chiefly used as hand towels...

F12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077826

However, if the towel is imported with the words "Kitchen Towel" printed across it, as you have suggested, or with other printing similar to the second sample, then the chief use of the class or kind of merchandise to which those towels belong would be as dish towels, and they would be classifiable in item 366.2420, TSUSA, with a textile category designation of 369.

Based on the foregoing ruling, the instant merchandise is classifiable in item 366.2460, TSUSA, under category 363.

Due to the frequent changes of statistical suffixes (the last 2 digits of the item number) and the applicability of textile restraints, you should contact your local Customs office prior to importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

1920 N Street, N.W.
Washington, D.C. 20036

Dear Ms. Levinson:

Your letter of December 3, 1985, concerning the dutiable status of a mixture of 93 percent ethanol (199-plus proof) and 7 percent ethylbenzene, a product of Brazil, has been referred to us for a reply. The imported product is to be mixed with petroleum derivatives to produce a motor fuel.

A mixture of the type described would be classifiable as a benzenoid mixture in item 407.16, TSUS. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. In this mixture the highest rate would be for ethanol in items 427.88/901.50, TSUS, of 3 percent ad valorem plus 60 cents per gallon.

Merchandise classifiable in item 407.16, TSUS, if a product of Brazil, a country entitled to GSP (Generalized System of Preferences) benefits, would be duty free upon compliance with all applicable regulations.

Sincerely,

Harvey B. Fox

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3801-5-002126 on the Classification of Iron Oxide Pellets

The pellets, a product of Canada, were entered in April 1985, liquidated in May 1985, and the protest was filed in June 1985. The importer claimed that the iron oxide pellets are classified under the provision for iron or steel waste and scrap in item 606.09, TSUS. The port classified the importation under the provision for other iron compounds in item 4[illegible].94.

The Customs laboratory described a sample of the importation as consisting of small, spherical pellets of varying diameter (0.06 inches and smaller) and composed of iron oxide, an inorganic chemical compound.

The material is not metal, not magnetic, not melted or reprocessed, nor of pigment grade. It is as described: an inorganic compound.

You are directed to deny the protest in full.

A copy of this decision should be furnished the protestant with the Form 19 Notice of Action.

Sincerely,

Arthur P. Schiffrin
Chief, General
Classification Branch

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 1/86 Concerning the Tariff Treatment of Merchandise Identified by the Importer as Model TS-23 Annular Saw

This is in response to your memorandum dated February 14, 1986, requesting Internal Advice on the tariff classification of a machine tool, identified by the importer as model TS-23 Annular Saw. Your request was initiated by a letter dated December 12, 1985, from Mr. Keither Robinson, on behalf of Specialized Grinding Systems, Montville, New Jersey.

FACTS:

The merchandise at issue is a model TS-23 Annular Saw which is a machine tool specially designed for the fully automatic slicing of semi-conductor material, including silicon.

The merchandise was classified as other metal-working machine tools, in item 674.35, Tariff Schedules of the United States (TSUS), since it is chiefly used to slice silicon, a "base metal" as defined under Headnote 2, Schedule 6, TSUS. The importer would classify the Annular Saw as other machine tools in item 674.42, TSUS, and believes this classification is more appropriate since silicon is a non-metallic substance.

ISSUE:

Whether the slicing of silicon is a metal working function.

G2

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC

LAW AND ANALYSIS:

Headnote 2, Schedule 6, TSUS, states that for purposes of the tariff schedules, the term "base metal" encompasses silicon. Customs has previously ruled that an annular slicing machine used to cut silicon was classifiable in item 674.35, TSUS, under the provision for other metal-working tools.

The importer relies on the definition of silicon as a non-metallic element found in the Webster's Dictionary to support the contention that the annular saw is properly classifiable in item 674.42, TSUS. The importer also emphasizes that silicon will receive future treatment as a non-metal under the Harmonized Commodity Code.

Although the dictionary definition of silicon is clearly stated, in view of the headnote in Schedule 6 and Customs previous rulings, silicon must be treated as a metal for tariff purposes. Also, we note that future treatment of silicon under the Harmonized Commodity Code has no bearing on present transactions. Therefore, since silicon is considered a metal in the tariff schedules, the annular saw used to slice silicon is properly classifiable as an other metal-working machine tool in item 674.35, TSUS.

HOLDING:

In view of the foregoing, the model TS-23 Annular Saw is classifiable under the provision for other metal-working tools in item 674.35, TSUS, dutiable at 4.8 percent ad valorem. You should advise the inquirer of this decision.

Arthur P. Scheffler

New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-5-013011

This protest was filed against your decision in the liquidation on August 23, 1985, of entry No. 85-186537-1 dated July 11, 1985, covering a shipment of parquet flooring panels.

FACTS:

The merchandise involved in this application for further review consists of prefinished wood flooring panels made by laminating three layers, one on top of the other. The top layer consists of thin (1/8 inch thick or less) strips of oak, pine, beech, ash and other woods arranged in various patterns. The core layer (5/16 inch thick) consists of softwood or particleboard. Attached to the core layer is a wood veneer backing (1/16 inch thick). Most of the boards measure approximately 5 to 8 inches in width and 8 feet in length. A few are square shaped measuring 8 inches by 8 inches or 12 inches by 12 inches. All of the boards are tongue-and-grooved.

This merchandise was classified under the provision for wood flooring in blocks, assembled sections or units, or other

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G4

forms in item 202.60, Tariff Schedules of the United States (TSUS). Protestant claims that the merchandise is more appropriately classifiable as wood flooring in strips and planks in item numbers 202.56 or 202.58, TSUS.

ISSUE:

Whether prefinished flooring panels composed of three layers are in strips and planks or whether they should be considered assembled sectiors or units.

LAW & ANALYSIS:

The court in D.B. Frampton & Company, Dorf International, Inc. v. United States, 60 Cust. Ct. 4, C.D. 3243 (1968) stated that a plank, whether conventional or assembled, falls within the provision for flooring, in strips or planks. The protestant relies on this case to support his claimed classification. However, we find the merchandise (Doweloc) in that case to be clearly distinguishable from that at issue here.

The product Doweloc consisted of strips of lumber, 2 inches thick fastened together laterally. A number of thick strips of lumber were placed together edge by edge to build up the width of this flooring. The court therefore concluded that flooring composed merely of several strips of lumber is flooring in strips and planks.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

068779

Dant & Russell, Inc. v. United States, Slip Op. 81-109, concluded that preassembled sections of strip flooring identical to the merchandise under consideration here are classifiable in item 202.60, TSUS. We find the prefinished flooring panels to be classifiable accordingly. Legislative history as indicated by the Tariff Classification Study clearly supports classification of preassembled sections of strip flooring in item 202.60, TSUS. See Tariff Classification Study, Explanatory Materials, CIE 1/64, vol. 1, p.165.

ORR Ruling 556-68 was issued to the protestant's Swedish counterpart and classifies identical merchandise in item 202.60, TSUS. CIE 2017/65 and ORR 988-70 classifies similarly laminated flooring in item 202.60, TSUS.

HOLDING:

Thus the flooring panels are properly classifiable as other wood flooring in blocks, assembled sections or units, or other forms in item 202.60, TSUS, dutiable at the 1985 rate of 4.4 percent ad valorem.

You are instructed to deny the protest in full.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077891

TO : District Director of Customs
Los Angeles, California 90053-3379

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice No. 96/85, Tariff Classification of a Leather Audio Cassette Carrying Case.

This is in response to your memorandum dated November 19, 1985, requesting internal advice on the tariff classification of merchandise identified by the importer as a "cassette case". Your request was initiated by letters dated July 30, 1985, from Charles Moed, on behalf of Limerence Marketing Company, Los Angeles, CA.

This matter should not have been made the subject of an internal advice but rather should have been handled as a protest. The letter sent by Mr. Moed contained sufficient information to be regarded as an informal protest including the fact that the entries have been liquidated. Consequently, this file is being returned to you for whatever action you deem appropriate.

With respect to the merits of the inquiry, we find that of the two competing classifications, the "cassette case" is more properly classifiable as luggage, of leather, in item 706.13, Tariff Schedules of the United States (TSUS), rather than as bags, baskets, boxes, and cases, of leather, in item 791.65, TSUS.

Ruling 077355, February 28, 1986, held that unfinished cassette carrying cases are classifiable as luggage, since they are designed to contain specific items to be carried with the person. See Schedule 7, Part 1, Subpart D, Headnote 2(a)(ii), TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

68

A copy of this memorandum may be attached to your final notice of action on the protest. All other requirements of 19 CFR 174.30 apply.

[redacted]

Dear [redacted]

With your letter of July 6, 1983, you enclosed a copy of a decision by the United States District Court for the District of Columbia in Sea-Land Service, Inc., v. Dole (Civil Action No. 83-0929) and Foss Alaska Line, Inc., v. Dole (Civil Action No. 83-0972).

The Court held that the decision of the Department of Transportation permitting [redacted], to carry domestic cargo between Dutch Harbor, Alaska, and Vancouver, British Columbia, on its subsidized vessels was "... arbitrary and capricious, an abuse of discretion, and contrary to law." To reach this decision, the Court found that:

> ... under existing statutes and regulations the joint rate tariffs requisite to foreign ship service coastwise between Vancouver and Dutch Harbor are non-existent. See American Trucking Association, Inc. v. ICC, 656 F.2d 1115 (5th Cir. 1981). There is no realistic possibility that any foreign carrier could qualify for such service. (At p. 7, memorandum opinion.)

The American Trucking Association, Inc., case referred to in the foregoing quotation, among other things, upheld the deregulation effected by the Interstate Commerce Commission (ICC) under the Staggers Rail Act of 1980 of certain rail transportation provided in connection with trailer-on-flatcar (TOFC) and container-on-flatcar (COFC) service, including movements involving ocean carriage.

You requested an opinion from us that:

> (1) because the ICC deregulation under the Staggers Rail Act of 1980 with regard to TOFC/COFC tariffs "... does not also exempt rail carriers from their obligation to file tariffs with respect to commodities moving in other equipment, such as boxcars, gondolas,

106263

G10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

> and hoppers [,]" a foreign vessel could qualify for service between Dutch Harbor and other points in the United States via Vancouver under the third proviso to 46 U.S.C. 883; and
>
> (2) under section 4.80b, Customs Regulations (19 CFR 4.80b), and American Maritime Association v. Blumenthal, 590 F.2d 1150, a foreign vessel could transport merchandise from Dutch Harbor to Vancouver for movement onward to other points in the United States if the merchandise is manufactured or processed into a new and different product before carriage onward to the United States.

Title 46, United States Code, section 883, in part, prohibits the transportation of merchandise between points in the United States embraced within the coastwise laws, either directly or via a foreign port, or for any part of the transportation, in any other vessel than a vessel built in and documented under the laws of the United States and owned by citizens of the United States. The third proviso of this statute states that:

> ... this section shall not apply to merchandise transported between points within the continental United States, including Alaska, over through routes heretofore or hereafter recognized by the Interstate Commerce Commission for which routes rate tariffs have been or shall hereafter be filed with said Commission when such routes are in part over Canadian rail lines and their own or other connecting water facilities.

We have ruled that through routes are "... recognized by the Interstate Commerce Commission ..." within the meaning of the third proviso when tariffs for them have been filed with the Commission, have not subsequently been rejected, have been effective according to their terms, and have not been subsequently suspended by the Commission or suspended or withdrawn. Any operator may provide the connecting water facilities on a through route in compliance with this proviso provided the operator is named in the tariffs filed.

We cannot comment on the routes for which the ICC accepts rate tariffs since the deregulation effected by that Commission under the Staggers Rail Act of 1980. However, in our ruling of September 14, 1982 (file: VMS-3-17-CO:R:CD:C 105806 PM), referred to in your letter, we held that:

106263

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

> [i]f the Interstate Commerce Commission does not accept for filing a rate tariff in connection with a through route involving rail-vessel service between a point in the continental United States and a point in Alaska via a Canadian port, and there is no rate tariff in effect for that through route, the ocean transportation portion of that service may not be performed by a foreign-flag or other non-coastwise-qualified vessel under the third proviso to 46 U.S.C. 883.

Conversely, if a through route is "... recognized by the Interstate Commerce Commission ..." (see previous paragraph for when such recognition occurs, for purposes of our administration of the third proviso) for vessel-Canadian rail transportation from Dutch Harbor to another point in the United States via Vancouver, a foreign-flag or otherwise non-coastwise-qualified vessel could perform the ocean transportation portion of that service under the conditions set forth in the previous paragraph.

Enclosed, for your information, is our most recent ruling (VES-3-17-CO:R:CD:C 106132 PH, June 20, 1983) on the third proviso. We assume that you are aware of H.R. 1076, a bill now before Congress under which the third proviso would be revoked. We are also enclosing a copy of that bill.

Section 4.80b, Customs Regulations, promulgated under the authority of 46 U.S.C. 883, provides, in part, that:

> ... merchandise is not transported coastwise if at an intermediate port or place other than a coastwise point (that is at a foreign port or place, or at a port or place in a territory or possession of the United States not subject to the coastwise laws), it is manufactured or processed into a new and different product, and the new and different product thereafter is transported to a coastwise point.

In American Maritime Association v. Blumenthal, 590 F.2d 1156 (1978), cert. den. 441 U.S. 943, the United States Court of Appeals, District of Columbia, considered whether Alaskan crude oil could be transported by non-coastwise-qualified vessels from Alaska to the United States Virgin Islands (a non-coastwise point) and there refined and then transported onward to a point in the continental United States. The Court held that the oil could be so transported because the continuity of the transportation was broken because the products of the crude oil transported after refining were quite

106263

G12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

different from the crude oil transported to the Virgin Islands, "i.e., products which are physically, chemically, and usefully different from the original crude oil." (590 F.2d 1156, at 1162, 1163.)

Under section 4.80b, Customs Regulations, and the American Maritime Association v. Blumenthal case, merchandise could be transported by a foreign-flag or otherwise non-coastwise-qualified vessel from Dutch Harbor to Vancouver and there, or at another point not subject to the coastwise laws, be "... manufactured or processed into a new and different product ...." That new and different product could then be forwarded to a point in the United States. The coastwise laws would not be violated by the transportation to Vancouver or that onward to a point in the United States because neither transportation would be considered coastwise trade. Enclosed, for your information, are copies of two decisions (VES-3-CO:R:CD:C 105319 JH, October 27, 1981, and VES-3-CO:R:CD:C 106093 PH, June 7, 1983) applying section 4.80b to merchandise transported from Alaska to the lower continental United States via a foreign port.

Sincerely,

(ACTING) D. H. REUSCH

28 FEB 1986

REFER TO

VES-10-03-CO:R:CD:C
108053 PH

Mr. Ronald C. Rasmus
President
Great Lakes Towing Company
1800 Terminal Tower
Cleveland, Ohio 44113

Dear Mr. Rasmus:

Your letters of November 22 and 27, 1985, concern our interpretation and application of 46 U.S.C. 316, both with regard to a particular situation and in general. You state that on this past November 20 the foreign-flag vessel M/V OLYMPIC LEADER grounded south of Nebbish Island, Michigan, in Lake Munuscong in United States waters while making its approach on an upbound transit of the Soo Locks. Your company offered salvage assistance to the OLYMPIC LEADER but was refused and the owners of the vessel utilized the services of a Canadian towing company, Purvis Marine, and their Canadian tug to perform the salvage.

Because you believe this to be a violation of 46 U.S.C. 316, you checked with Customs in Sault Ste. Marie. You state that Customs advised you that a treaty between Canada and the United States permitted the Canadian tug company to operate in United States waters "whether or not the vessel was in distress, needed salvage service or, for that matter, a normal tow." You ask whether Canadian-flag tugs may engage in certain activities when United States-flag tugs are available.

Section 4370(a) of the Revised Statutes, as amended (46 U.S.C. 316(a)), provides that it shall be unlawful for any vessel not wholly owned by a citizen of the United States and not having in force a certificate of registry, certificate of enrollment, or other named document to tow any vessel, other than a foreign-flag vessel or a vessel in distress, between ports or places embraced within the coastwise laws of the United States, either directly or by way of a foreign port or place, or to do any part of such towing, or to tow any such vessel from point to point within the harbors of such places. The penalties for violation of this statute are a fine of not less that $250 to $1000 against the owner and master of the towing vessel and $50 per ton on the measurement of the towed vessel against the towing vessel.

AS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Both Houses of the Congress recently passed a bill, H.R. 2466, which would have amended this law. This amendment would have made the prohibition in 46 U.S.C. 316(a) applicable to any vessels except those having in force a coastwise or Great Lakes license. This part of the amendment would have ratified Customs already existing interpretation of 46 U.S.C. 316(a). The amendment also would have deleted the exemption for foreign-flag vessels so that an unqualified vessel would be prohibited from towing any vessel, other than a vessel in distress, between coastwise points. This bill was vetoed by the President.

Section 4370(d) of the Revised Statutes, as amended (46 U.S.C. 316(d)), provides, in part, that:

> No foreign vessel shall, under penalty of forfeiture, engage in salvaging operations on the Atlantic or Pacific coast of the United States, in any portion of the Great Lakes or their connecting or tributary waters, including any portion of the Saint Lawrence River through which the international boundary line extends, or in territorial waters of the United States of the Gulf of Mexico, except when authorized by a treaty or in accordance with the provisions of section 725 of this title ....

Section 4370(e) of the Revised Statutes, as amended (46 U.S.C. 316(e)), provides, in part, that nothing in section 4370, Revised Statute (46 U.S.C. 316), shall be held or construed to prohibit or restrict any assistance to vessels or salvage operations authorized by article II of the treaty between the United States and Great Britain signed in Washington on May 18, 1908 (35 Stat. 2036). This treaty provides that vessels and wrecking appliances from the United States or Canada may salve any property wrecked and may render aid and assistance to any vessels wrecked, disabled or in distress in the waters or on the shores of the other country in that portion of the St. Lawrence River through which the International Boundary line extends and in Lakes Ontario, Erie, St. Clair, Huron, and Superior, the Rivers Niagara, Detroit, St. Clair and Ste. Marie, the Canals at Sault Ste. Marie, and on the shores and in the waters of the other country along the Atlantic and Pacific Coasts within a distance of 30 miles from the International Boundary on such Coasts. The treaty also provides that these reciprocal wrecking and salvage privileges shall include all necessary towing incident thereto. Vessels from either country employed in salving in the waters of the other are required to make a full report as soon as practicable at the nearest customhouse of the country in whose waters the salving took place.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A6

108053

The Act of June 19, 1878 (20 Stat. 175; 46 U.S.C. 725), as amended, referred to in 46 U.S.C. 316(d), provides that Canadian vessels and wrecking appurtenance may render aid and assistance to Canadian or other vessels, and property wrecked, disabled, or in distress in the waters of the United States contiguous to Canada. This statute provides that it shall be construed to apply to the canal and improvement of the waters between Lakes Erie and Huron, and to the waters of the St. Mary's River and canal. The statute also provides that it shall cease to be in force from the date of a Presidential Proclamation to the effect that Canada has withdrawn, revoked, or rendered inoperative the reciprocal privileges provided for in the statute.

With regard to the particular salvage operation you describe, that of the OLYMPIC LEADER after it was grounded south of Nebbish Island in Lake Munuscong, the Treaty of 1908 and 46 U.S.C. 725 permit the use of a Canadian-flag vessel for this salvage, as well as any towing incident to the salvage.

We will answer the series of questions you raise, in the order asked, on the basis of the statutory authorities described above.

1.(a) Canadian-flag tugs may engage in salvage work in the United States waters or ports listed in the Treaty of 1908 and 46 U.S.C. 725 for United States-flag vessels or equipment, foreign-flag vessels or equipment, and Canadian-flag vessels or equipment.

1.(b) Except for towing which is necessarily incident to salvage permitted under the Treaty of 1908 and 46 U.S.C. 725, or the towing of a vessel in distress, Canadian-flag tugs may not engage in the in-port towing (including pushing) in any United States port of United States-flag vessels. Canadian-flag tugs may engage in such towing of foreign (including Canadian)-flag vessels. This prohibition, under 46 U.S.C. 316(a), applies only to the towing, or pushing, of vessels, so it would not preclude the use of Canadian-flag tugs for docking, undocking, or assistance, if no towing or pushing were involved of vessels other than foreign-flag vessels or vessels in distress in United States ports, nor would it preclude the towing, or pushing, of "equipment" which is not a vessel.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A1

108053

1.(c) See 1.(b), above. The towing between United States ports of any vessel, except a foreign-flag vessel or a vessel in distress, is prohibited to any vessel other than a coastwise-qualified vessel. Thus, a Canadian-flag tug would not be prohibited from such towing of a foreign (including Canadian)-flag vessel.

1.(d) Insofar as United States law is concerned, Canadian-flag tugs may engage in the towing of any vessel between a United States port and a Canada port, provided, that the tow is not part of an overall tow of a vessel other than a foreign-flag vessel or a vessel in distress between United States ports (see 46 U.S.C. 316(a)).

1.(e) If the assistance provided to vessels transiting the United States Soo Locks and St. Mary's River approaches consists of towing, or pushing, such assistance to vessels other than foreign-flag vessels or vessels in distress must be by United States coastwise-qualified vessels if the assisistance commences and terminates in United States waters. Otherwise, you should be guided by our September 16, 1983 (VES-10-03-CO:R:CD:C 106326 KP), letter to you, copy enclosed for your convenience.

2.(a) Although we cannot comment authoritatively on whether United States-flag tugs are permitted by Canada to engage in salvage operations in Canadian waters, under the Treaty of 1908 and the reciprocal privileges granted under 46 U.S.C. 725, we believe United States-flag tugs should be permitted to engage in the salving of any vessels or equipment in the waters described in those provisions.

2.(b)-(e) We do not know what restrictions Canada places on towing in its waters and between its ports and are unable to comment on these questions.

With regard to your allegation that United States-flag tugs are routinely prohibited by Canadian Customs authorities from towage and salvage assistance to Canadian and foreign-flag vessels in Canadian waters and ports, we are sending a copy of your letter with a copy of a related complaint from the Pacific Northwest regarding the permitted use of Canadian-flag vessels in the United States and the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A8

108053

denial of permission for a similar use of United States-flag vessels in Canada, to the United States Department of State. We are asking that Agency to investigate this matter, in view of the provisions for reciprocity in the Treaty of 1908 and 46 U.S.C. 725.

Sincerely,

Edward B. Gable, Jr.
Director, Carriers, Drawback
and Bonds Division

TO : Port Director
Jacksonville, Florida

FROM : Director, Carriers, Drawback and Bonds Division

SUBJECT: Tonnage Certificate for the M/V HUAL CARMENCITA

Pursuant to his telephone conversation on February 11, 1986, with Mr. Paul Hegland of my staff, Inspector John Heafer of your Port sent a copy of the tonnage certificate for the HUAL CARMENCITA. Mr. Heafer asked what is the proper document for this vessel under the 1969 International Convention on Tonnage Measurement of Ships.

The tonnage certificate for the HUAL CARMENCITA is entitled "Det Norske Veritas Certificate of Tonnage Measurement (measured in accordance with the Convention ... concluded in Oslo on the 10th of June 1947 ...)." According to this certificate, the HUAL CARMENCITA was built in 1983.

Information Notice 82-134, issued December 10, 1982, informed Customs officers of the coming into effect of the International Convention for Tonnage Measurement of Ships, 1969, and the imminent ratification thereof by the United States. The United States has ratified the Convention (TIAS 10490). Pursuant to the 1969 Convention and as stated in the Information Notice, "Vessels of contracting parties constructed on or after July 18, 1982, must be assigned International Tonnage Certificates."

The HUAL CARMENTICA is a Norwegian-flag vessel. Norway is a party to the 1969 Convention. Thus, it appears that under the 1969 Convention, as described in the Information Notice, the HUAL CARMENCITA should have been measured under the 1969 Convention and should be carrying a tonnage certificate issued under that Convention.

We have reviewed the 1969 Convention, however, and due to the definition in that Convention of "new ship," the 1969 Convention actually only requires vessels "the keel of which [were] laid, or which [were] at a similar stage of construction, on or after the date of coming into force of the present Convention [July 18, 1982]" to be measured under and carry a tonnage certificate issued under the 1969 Convention. (See Article 2(6) of the 1969 Convention.) We have telephonically inquired of the agents for the HUAL

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A10

CARMENCITA as to the date the keel was laid for that vessel. After checking with the Norwegian owners of the vessel, the agents stated the keel of the vessel was laid on June 11, 1982. Accordingly, because its keel was laid before the coming into force of the 1969 Convention, the HUAL CARMENCITA may properly use its old Det Norske Veritas tonnage certificate until July 18, 1994.

Please convey to Mr. Heafer our thanks for his alertness in noticing this discrepancy and for bringing this problem to our attention. We are having this memorandum published to alert other Customs ports of this interpretation of the 1969 Convention in these circumstances.

T.D. 73-26-P
4

Dear Mr. Boyett:

T.D. 53739-J, as amended by T.Ds. 68-87-S and 71-135-U, authorizing the allowance of drawback under the provisions of section 1313(b), title 19, United States Code, on cold rolled steel sheets, coiled or cut, manufactured by Wheeling-Pittsburgh Steel Corporation, Pittsburgh, Pennsylvania, at its Steubenville, Ohio, factory, (North Works) with the use of steel ingots, slabs, and hot rolled coils, is hereby further amended to cover the various steel products listed in the attached Exhibit A manufactured by the company under section 1313(b) in the factories of the company listed in schedule 1, with the exceptions noted below, where specified manufacturing operations take place with the use of ferromanganese, fluorspar, and spelter.

There are enclosed, approved, copies of the manufacturer's supplemental statements subscribed to on June 7, 1972, and November 10, 1972, requesting the foregoing action and containing the manufacturer's proposals as to the procedures it will follow and the records it will keep. Such records shall include those prescribed in section 22.5(a)(1) through (6) of the Customs Regulations.

The quantity of imported ferromanganese and fluorspar, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity thereof equivalent to the quantity of such merchandise of the same kind and quality as that designated which was used in the manufacture of the exported articles as shown by the schedules which are attached to the manufacturer's statement of June 7, 1972, and forms a part thereof.

DEPARTMENT OF THE TREASURY—BUREAU OF CUSTOMS CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (5-72)

200248

The quantity of imported spelter, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity equivalent to the quantity of such merchandise of the same kind and quality as that designated which appears in the exported articles, as shown by an abstract of the manufacturing records which shall be filed with the drawback entry.

Operations conducted by separate legal entities cannot be made the subject of a rate of drawback issued to Wheeling-Pittsburgh Corporation although they are wholly-owned subsidiaries. Accordingly, this authorization does not provide for the allowance of drawback on such steel products manufactured by [redacted] factory and [redacted] at its factory located at [redacted] with the use of ferromanganese, fluorspar and spelter.

Although it is not clear whether the [redacted] manufactures exported articles covered by this amendment, the foregoing denial applies to the operations of this company. This denial is explicitly stated in order to obviate possible misunderstanding.

Drawback may be allowed hereunder, upon compliance with the law and the regulations, on the articles covered hereby which are manufactured on and after August 1, 1968, and exported on and after September 1, 1968. Exportation shall be made within 5 years after importation of the imported merchandise.

There are enclosed extra copies of the manufacturer's drawback statements and of this authorization, which may be furnished with the first drawback claim filed hereunder to the special agent in charge pursuant to section 22.4(g) of the Customs Manual.

Sincerely yours,

[redacted]

Dear [redacted]

This is in reply to your letter of April 30, 1973, in which you ask whether cutting imported labels and sewing them on sheets and pillow cases is a manufacturing process under the provisions of section 1313(a), title 19, United States Code.

Customs has repeatedly held that no drawback can be allowed on imported labels which are placed on articles manufactured or produced in the United States for export, on the basis that the exported articles are not manufactured or produced with the use of the imported labels within the meaning of section 1313(a). This holding is in accordance with Beadleston et al. vs. the United States (104 Fed. Rep. 295), and with Schlitz Brewing Co. vs. the United States (181 U.S. Rep. 584). Consequently your operation does not qualify for drawback.

With respect to future importations, your attention is invited to the fact that the labels you describe in your letter, both the cardboard and cloth labels, may be admitted temporarily free of duty under bond in accordance with item 864.05 and headnote 1, Schedule 8, Part 5, Subpart C, Tariff Schedules of the United States. A copy of the Customs Regulations pertaining to Temporary Importations Under Bond is enclosed herewith.

Sincerely yours,

(Signed) J. P. TEBEAU

Dear Mr. Boyett:

You are hereby authorized to allow drawback upon compliance with the provisions of title 19, United States Code, section 1313(b), and Part 22 of the Customs Regulations, on chain link fence manufactured by Phelps Dodge Steel Company, Inc., Catano, Puerto Rico, with the use of galvanized wire; cold drawn steel wire, welded steel wire mesh, and nails manufactured by the company with the use of steel wire rod; and fence posts manufactured by the company with the use of hot rolled steel skelp.

There is enclosed, approved, a copy of the manufacturer's drawback statement subscribed to on July 2, 1973, requesting the foregoing action and containing the manufacturer's proposals as to the procedures it will follow and the records it will keep. Such records shall include those prescribed in section 22.5(a)(1) through (6) of the Customs Regulations.

The quantity of imported galvanized wire, steel wire rod, and hot rolled steel skelp, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed the quantity thereof equivalent to the quantity of such merchandise of the same kind and quality as that designated which appears in the exported articles, as shown by an abstract of the manufacturing records which shall be filed with the drawback entry.

Drawback may be allowed hereunder, upon compliance with the law and regulations, on articles covered hereby which are manufactured on and after January 1, 1971, and exported on and after August 6, 1971. Exportation shall be made within 5 years after importation of the imported merchandise.

Mr. Jack T. Lacy
Regional Commissioner of Customs
Chicago, Illinois 60603

Dear Mr. Lacy:

You are hereby authorized to allow drawback upon compliance with the provisions of title 19, United States Code, section 1313(b), and Part 22 of the Customs Regulations, on titanium rod, wire and bar manufactured by [redacted] with the use of titanium sponge, titanium ingot, and titanium billet.

There is enclosed, approved, a copy of the manufacturer's drawback statement subscribed to on July 22, 1975, requesting the foregoing action and containing the manufacturer's proposals as to the procedures it will follow and the records it will keep. Such records shall include those prescribed in section 22.5(a)(1) through (5) of the Customs Regulations.

The quantity of imported titanium sponge, titanium ingot, and titanium billet, or of such merchandise manufactured under drawback regulations, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity thereof equivalent to the quantity of such merchandise of the same kind and quality as that designated which was used in the manufacture of the exported articles, as shown by an abstract of the manufacturing records which shall be filed with the drawback entry.

Drawback may be allowed hereunder, upon compliance with the law and regulations, on the articles covered hereby which are manufactured on and after August 1, 1973, and exported on and after February 13, 1974. Exportation shall be made within 5 years after importation of the imported merchandise.

There are enclosed extra copies of the manufacturer's drawback statement and of this authorization, which may be used in connection with verification of the first drawback claim filed hereunder.

[redacted] Sincerely yours,

(Signed) J. P. TEBEAU

[redacted]

Dear [redacted]

This is in reply to your letter of January 14, 1976, in which you furnished additional information regarding a krinkling process to ascertain whether this process would be considered a manufacture or production for purposes of title 19, United States Code, section 1313.

According to the facts set forth in your letter, Chambray fabric is desized and resinated. It is then run through a mechanical device in rope form, after which it is dried in a loop dryer to produce wrinkles in the fabric.

Headquarters, U. S. Customs Service is of the opinion that the described operation would not result in a new and different product having a distinctive name, character or use and accordingly the krinkling process would not be a manufacture or production within the meaning of section 1313.

Sincerely yours,

(Signed) J. P. TEBEAU

J. P. Tebeau

DRA-1-09-R:CD:D T
206724

[redacted]

Dear [redacted]

This is in further reference to your company's application for a rate of drawback on resilient sheet vinyl floor coverings manufactured under the provisions of title 19, United States Code, section 1313(b), with the use of polyvinyl chloride resins. Receipt is acknowledged of the company's drawback statement subscribed to on August 19, 1976, in furtherance of its drawback application. Section 1313(b) provides, in part:

> If imported duty-paid merchandise and duty-free or domestic merchandise of the same kind and quality are used in the manufacture or production of articles within a period not to exceed three years from the receipt of such imported merchandise there shall be allowed upon the exportation of any such articles * * * an amount of drawback equal to that which would have been allowable had the merchandise used therein been imported * * *

The description and specifications of the imported and domestic polyvinyl chloride resins which have been included in the company's drawback statement have been reviewed in detail. It is noted that the respective properties of the imported and domestic merchandise set forth in the parallel columns differ in various respects.

The U. S. Customs Service is of the opinion that polyvinyl chloride resins which do not have the same properties as set forth in ASTM Designation D 1755-66 are not merchandise of the "same kind and quality" within the meaning of section 1313(b). If your company has further information to submit in this respect, it will receive prompt review, and you will be advised of the final decision as to your drawback application.

Sincerely yours,

[redacted]

[redacted]

Dear [redacted]

Receipt is acknowledged of the supplemental drawback statement of your company subscribed to on December 21, 1976, in furtherance of its application for a rate of drawback dated December 21, 1976, to cover titanium metal (sponge), titanium metal ingot, sheet, strip, bar, plate and billets manufactured under the provisions of title 19, United States Code, section 1313(b), with the use of magnesium metal.

Efficient Customs administration and orderly liquidation of drawback claims require that a complete drawback statement be employed for drawback authorizations rather than an amendment form. Please resubmit the present statement in the form used initially to establish a rate of drawback under section 1313(b). A sample format for the preparation of a drawback statement is enclosed for your convenience. The effective dates which your company has requested will not be affected by this change in the form of the drawback statement used.

Upon receipt of the revised statement, further consideration will be given to your application.

Sincerely yours,

George C. Steuart

George C. Steuart
Chief
Drawback and Bonds Branch

Enclosure [redacted]

B6

DRA-1-RRUCDB
211997 NR

ISSUE:

Whether drawback is applicable when designated merchandise used in an assembly operation to manufacture an article under drawback conditions is subsequently dismantled from the completed article for convenience in shipping for exportation purposes.

FACTS:

A drawback claimant has an approved contract under section 1313(a), title 19, United States Code, to assemble tractors and other automotive articles for export with the use of imported machinery, engines, subassemblies, and parts. The claimant asks if drawback would be allowed for imported tires under the following set of facts;

1. Imported tires are mounted onto rims which in turn are affixed to a tractor assembled under drawback conditions.

2. The assembled tractor is tested.

3. After testing, the rims and tires are removed from the tractor.

4. The tires and rims are separated.

5. The tires are tied into a bundle and the rims are packed in boxes.

6. The tires and rims are dismantled from the tractor and separated for convenience in shipping.

7. The tractor, together with the bundled tires and packed rims, is shipped and exported as a complete article or as an entirety.

LAW AND ANALYSIS:

The United States Customs Court has held that mounting five imported tires and tubes on American made wheels, four of which were affixed to an automobile and the fifth one placed in the trunk of the automobile as a spare, was a manufacture or production for drawback. See 27 Cust. Ct. 89, C.D. 1352 (1951).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B1

In Customs Service Decision (C.S.D.) 79-79, we held that a disassembly and repacking operation did not constitute a manufacture or production for drawback. A copy machine was imported and was completely disassembled. Parts of the machine were repackaged, and exported as a kit. In C.S.D. 79-79, the only claimed manufacture or production consisted of a disassembly operation and differs from the facts under consideration.

In the case under consideration, the imported merchandise, consisting of tires, was used in an assembly operation in a manner similar to the operations discussed in C.D. 1352, which the Court held was a manufacture or production for drawback. The subsequent dismantling of the tires and rims was for convenience in shipping the tractor with the tires and rims as an entirety for exportation.

The claimant's drawback contract should incorporate fully the operation described and should be supported by proper record keeping.

HOLDING:

Drawback is applicable for designated merchandise which is used in an assembly operation to manufacture an article under drawback conditions and the designated merchandise is subsequently disassembled from the completed article for convenience in shipping the units as an entirety.

Re: Your letter of May 11, 1982 - Exportation for Drawback

Dear [redacted]

In the referenced letter you ask whether drawback may be obtained under the manufacturing drawback laws for certain quartz components contained in temperature measuring devices.

A client leases temperature recording devices to U.S. exporters who place the devices in containers of merchandise for export. Upon arrival at the port of entry in the foreign country, the devices are removed and are supposed to be returned to your client's lessee in the United States. However, approximately 50,000 of these instruments are annually lost and are not returned to the lessee, who must then pay your client for the lost instruments.

As you state in your letter, an exportation occurs when merchandise is sent out of the United States with the intent that it join the commerce of some foreign country. This is the definition set out in Customs Regulations section 113.55(a) and is taken from the opinion in many court cases, most notably Swan & Finch Co., v. United States, 23 S. Ct. 702, 190 U.S. 143 (1903). It is the intent at the time the merchandise leaves the United States which controls.

In a few cases, for example U.S. v. Coastwise Steamship & Barge Co., T.D. 38047, 9 Ct. Cust. Appls. 216 (1919) it was held that although at the time of exit from the United States the requisite intent was not present subsequent circumstances indicated that because the merchandise was found to have been intentionally landed in a foreign country to be the subject of commerce in that country, an exportation had occurred.

In your client's case, however, the facts do not warrant such a conclusion by us. After leaving this country, the instruments simply disappear. Their location is not known. They could be in a foreign country, could have been relanded in the United States, or could be at the bottom of the sea. It is known that they were not landed in a foreign country to become a subject of commerce of that country (see concurring opinion, Coastwise Steamship supra, 9 Ct. Cust. Appls. at (219). Finally, in order to claim drawback the claimant must affirm on the drawback entry that the merchandise was exported with the intention that it not be relanded in the United States.

B9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Our conclusion would be the same if your client sold the instruments outright to the U.S. customer. Even if an export bill of lading were prepared, the fact remains the the instruments do not exit the United States with the requisite intent that they become the subject of commerce in some foreign country.

These instruments are not considered ships' equipment or supplies under 19 U.S.C. 1309, since they are not necessary for the operation, navigation, or safety of the vessel or its crew. These are instruments which monitor the temperatures which containerized cargo are subjected to during voyages.

Sincerely,

George C. Steuart

[redacted]

Dear [redacted]

Re: Your Letter Dated December 28, 1984

You ask whether steel pipe, manufactured in a foreign trade zone (FTZ) from nonprivileged steel plate imported from the European Community (EC), and entered for consumption as pipe, will, in the form entered, be considered a product of the FTZ and not subject to quota restrictions applicable to steel pipe and tube imported from the EC.

The question is raised in connection with a decision announced on November 29, 1984, to enforce limits on pipe and tube imports from the EC pursuant to section 805(b) of the Trade and Tariff Act of 1984, P.L. 98-573.

In general, quota considerations come into play at the time merchandise is removed from the FTZ into Customs territory for consumption. See Inter-Maritime Forwarding Co., Inc. v. United States, C.D. 2242. An exception may occur where the language of the applicable quota agreement or other restraint provides otherwise.

With respect to the Steel Import Stablization Act (Title VIII, P.L. 98-573), section 804(1) defines "bilateral arrangement" in part to include those arrangements relating to the "importation into" the United States of certain categories of steel products. Section 805(b)(2) of that Act, however, provides that at the request of the Secretary of Commerce the Secretary of the Treasury shall take action to ensure that the aggregate quantity of EC articles entered into the United States are in accordance with the arrangement.

Merchandise in a FTZ, while imported, is not entered into the Customs territory of the United States. For most purposes articles manufactured in a FTZ are considered to be products of the FTZ. Since the pipe manufactured in the FTZ is entered into the United States for consumption as a product of the FTZ and not of the EC the quantitive restraint on pipe and tube from the EC would not be applicable.

B11

Section 15 of the Foreign Trade Zones Act of 1934, as amended (19 U.S.C. 81o(c)), provides that:

> The Board may at any time order the exclusion from the zone of any goods or process of treatment that in its judgement is detrimental to the public interest, health, or safety.

Accordingly, as the operation may result in circumvention of a quota, you should obtain, through the zone grantee, specific approval from the Foreign Trade Zones Board for the proposed operation.

This is an information letter within the meaning of 19 CFR 177.1(d)(2).

Sincerely,

Edward B. Gable, Jr.

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

23 DEC 1985

REFER TO

CON-1-CO:R:CD:D
218199 R

ISSUES:

1. Whether the Customs Service must recognize a customhouse broker's lien for freight?

2. Whether a customhouse broker's lien for freight must be certified by the carrier?

3. Whether the Customs Service must recognize a lien for freight on merchandise other than the merchandise on which the lienor advanced money for freight?

FACTS:

A customhouse broker and a carrier advance money to an importer to pay freight on a shipment of merchandise. Subsequent to that shipment the importer imports another shipment of merchandise. Under the applicable State law, the customhouse broker and carrier each have a lien against the second shipment of merchandise.

LAW AND ANALYSIS:

The provision on liens, 19 U.S.C. 1564, was amended by section 212 of the Trade and Tariff Act of 1984 (Act of October 30, 1984, sect. 212, 98 Stat. 2984). Section 212 added a new sentence to 19 U.S.C. 1564.

> The provisions of this section shall apply to licensed customs brokers who otherwise possess a lien for the purposes stated above upon merchandise under the statutes, or common law, or by order of any court of competent jurisdiction of any State.

Prior to that amendment the Customs Service ruled, in an internal advice request (file 302729) dated October 22, 1975, that it would recognize, under 19 U.S.C. 1564, only liens filed by carriers. In that ruling, the Customs Service noted that it had refused to recognize a lien filed by a port authority.

During the hearings on the language which was enacted as section 212, the Customs Service position was brought to the attention of Congress. Hearings before the Committee on Ways

B13

and Means on Miscellaneous Tariff and Trade Bills 98th Cong., 656-662 (November 15, 1983 and June 21, 1984). The language of the amendment shows that Congress rejected the view that 19 U.S.C. 1564 was not applicable to customhouse brokers. The Customs Service cannot refuse to recognize a lien for freight on the ground that the lien is possessed by a customhouse broker rather than by a carrier.

The second question is whether a customhouse broker must have its lien certified by a carrier because of the regulatory requirement set in 19 CFR 141.112(b). The language of that section is unchanged since T.D. 73-175. At that time the Customs Service position was that 19 U.S.C. 1564 provided protection only to carriers. If a customhouse broker advanced payment for freight, the carrier would not necessarily know that fact. As such, the carrier would not necessarily have knowledge of the facts. In that circumstance, the carrier would not be able to certify the validity of a lien. It seems clear that strict adherence to the requirement in 19 CFR 141.112(b) would tend to frustrate the change in 19 U.S.C. 1564 made by section 212 of the Trade and Tariff Act of 1984. It is likely that such an interpretation would be viewed as imposing an unreasonable requirement. Campbell v. U.S., 107 U.S. 407, 410 (1882) and American Pistachio Corp. v. U.S., 23 Cust. Ct. 103, 108, C.D. 1198 (1949). A notice of a lien possessed by a customhouse broker need not be signed or certified by a carrier. In view of the change made by section 212 of the Trade and Tariff Act of 1984, the term "carrier" in 19 CFR 112(b) is to be construed as the person possessing the lien.

The third question is whether recognition is to be given to a lien on merchandise other than the merchandise on which the lienor advanced freight money. The question is whether 19 U.S.C. 1564 is to be construed as covering general, rather than specific, liens. A possessory lien is general where the lienor has the right to hold personal property as security for the amount owed on a general account, and a possessory lien is specific where the lienor has the right to hold personal property as security for a demand on one contract. A specific lien is security for a demand arising out of one transaction while a general lien is an enlargement of a specific lien and it secures the demand arising out of a series of transactions. Restatement, Security sections 60, 61, and 62 (1981 reprint). A lien of a carrier is an example of a specific lien.

218199

B14

Restatement, Security section 61(b). Dobie, Bailments and Carriers section 149 (1914). Attorneys, factors, and bankers generally are entitled to have general liens. In re. Brown, 4 Fed. Cas. 339 (No. 1984) (D.C.S.D.N.Y. 1842).

The Act of July 18, 1866, c. 201, sect. 17, 14 Stat 178, 182 was the first lien recognition statute in the laws on Customs. That provision was interpreted as applying to any person who claimed a lien on imported goods possessed by a Customs officer. 16 O.A.G. 74 (1878). That provision was repealed by the Act of March 2, 1867, c. 188, sections 3 and 4, 14 Stat. 546, 547. Section 3 of the Act of March 2, 1867, restricted recognition of liens to those liens held by a carrier on goods imported in that carrier's vessel or vehicle. Section 3 of the Act of March 3, 1867, was codified as Rev. Stat. section 2981. T.D. 3453 (1878) held that Rev. Stat. section 2981 (1878 ed.) did not cover recognition of a lien for freight due on merchandise forming the whole or part of a previous importation. In 16 O.A.G. 74 (1878), the Attorney General opined that Rev. Stat. section 2981 (1878 ed.) recognizes the lien of the owner or consignee of the vessel or vehicle in which the goods arrive in the United States. That ruling held it was proper to refuse to recognize the lien of an inland carrier who moved the goods in bond through the United States after importation.

The Act of June 10, 1880, c. 190, sect. 10, 21 Stat. 173, 175 amended Rev. Stat. section 2981 by reenacting part of the language of the Act of July 18, 1866, c. 201 sect. 14 14 Stat. 178, 182. However, only a lien for freight was to be recognized. As a result of that change in T.D. 5353 (1882) the Solicitor of the Treasury held that Rev. Stat. section 2981, as amended by the Act of June 10, 1880, covered liens of inland carriers. However even the lien for freight was subject to a narrow view. Although the opinion published as 16 O.A.G. 74 (1878) implied that all liens were covered by the language of the 1866 Act, in T.D. 7938 (1886), and reaffirmed in T.D. 8069 (1887), the Treasury Department held that a lien for freight and wharfage that occurred before the voyage to the United States would not be recognized. Although abandoned goods were held subject to a charge of general average in T.D. 12489 (1892), in T.D. 14472 (1893), the Treasury Department refused to recognize a lien for general average under Rev. Stat. section 2981, as amended by the Act of June 10, 1880. Administrative decisions and commentaries of that period regarded Rev. Stat. section

318199

C1

2981, as amended by the Act of June 10, 1880, as protection only for carriers. T.D. 9486 (1889), T.D. 15066 (1894), Elmes, Law of the Customs, section 649 (1887), and Gould and Tucker, Notes on the Revised Statutes of the United States, 629 (1889). The basis for that narrow interpretation seems to have been the recognition that Rev. Stat. section 2891, as amended by the Act of June 10, 1880, provided the sole instance of the Government holding another's property for a purpose other than the enforcement of the public right. See T.D. 8813 (1888) which was issued in response to 19 O.A.G. 101 (1888). Since the statute was viewed as favoring private parties rather than public interests, it appears that the scope of the provision was expanded only by statutory amendment. The language for expanding section 2891 to cover other charges and contribution for general average was in the Act of May 21, 1896, c. 217, 29 Stat. 129. See also T.D. 22596 (1900), T.D. 22683 (1900), and T.D. 24431 (1903) which make it clear that the Treasury Department viewed Rev. Stat. section 2891, as amended by the Act of May 21, 1896, as a protection for carriers.

Rev. Stat. section 2891 was repealed by the Tariff Act of 1922. Section 564 of that Act superseded Rev. Stat. 2981, but the relevant language remained unchanged. Section 564 of the Tariff Act of 1930 replaced section 564 of the 1922 Act without any change. See also 35 O.A.G. 228 (1927).

Article 851 of the Customs Regulations of 1923, which implemented the 1922 Tariff Act, restricted the recognition to a lien of a carrier on merchandise actually carried and taken out of the carrier's possession by the Customs Service. The note to article 288 of the Customs Regulations of 1931, which implemented section 564 of the Tariff Act of 1930, shows that the Customs Service viewed the statute as being applicable to only carriers. Further, the definitions of freight and charges in article 289 of the Customs Regulations of 1931, which essentially repeated the earlier definitions found in article 431 of the Customs Regulations of 1899 and in article 738 of the Customs Regulations of 1915, define those terms so that they could apply only to the goods in the shipment in issue. Articles 293-295 of the Customs Regulations of 1937 and section 8.25 of the Customs Regulations of 1943 do not expand the scope of Customs Service position on lien recognition beyond that already discussed.

The language of section 212 of the Act of October 30, 1984, simply makes the 19 U.S.C. 1564 available to customhouse

218199

C2

brokers. It does not expand the scope of the basic statute. The problem that was brought to the attention of Congress in the prepared statement of the National Customs Brokers and Forwarders Association of America, Inc., did not include the issue presented here. Hearings before the Committee on Ways and Means on Miscellaneous Tariff and Trade Bills, 98th Cong., 661 (November 15, 1983 and June 21, 1984).

With the repeal of section 17 of the Act of July 18, 1866, the applicable statutory language indicates that specific liens were intended to be recognized under 19 U.S.C. 1564. The amendment made by section 212 of the Act of October 30, 1984, did not change that concept. There is nothing in the history of the provision to suggest that the Customs Service is entitled to take an expansive interpretation of that provision.

HOLDINGS:

1. The Customs Service will not deny recognition of a lien under 19 U.S.C. 1564 on the ground that the lienor is a customhouse broker rather than a carrier.

2. Section 141.112(b) of the Customs Regulations is to be interpreted in light of the amendment made by section 212 of the Tariff and Trade Act of 1984 and certification of a lien under 19 U.S.C. 1564 is to be by the lienor or the lienor's agent.

3. Under 19 U.S.C. 1564 only specific liens will be recognized.

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

SEP 26 1985

REFER TO

BON-1-CO:R:CD:D
218259 R

The Honorable
Jack Kemp
House of Representatives
Washington, D.C. 20515

Dear Mr. Kemp:

Thank you for your communication of September 6, 1985, which enclosed correspondence from Ms. Karen L. Kraus on behalf of Mr. Charles Nicosia. (File No. K 63 Al.)

Mr. Nicosia imported an automobile that did not comply with the United States statutory standards on emissions and safety. To guarantee the payment of all Customs duties and the compliance with all importation requirements which include meeting the motor vehicle emissions and safety standards, Mr. Nicosia was required by law (42 U.S.C. 7522(b) for emission standards and 15 U.S.C. 1396(b) for safety standards) to post a performance bond with the U.S. Customs Service in order to get immediate possession of the automobile.

The invoice from Ja-Mar Forwarding, Inc., which was included with Ms. Kraus' letter, shows that Mr. Nicosia employed a corporate surety on the performance bond. The invoice shows that Mr. Nicosia deposited $1550.00 as collateral with the surety and paid $25.00 as a bond premium. The surety on the bond is the Washington International Insurance Company. The amount of the collateral and the premium charged is a matter between Mr. Nicosia and the surety company; the contract between those two parties does not come within Customs Service jurisdiction.

Under the statutory procedures established by Congress, the Environmental Protection Agency (EPA) and the Department of Transportation (DOT) have the primary responsibility for the motor vehicle emissions and safety standards and Customs simply enforces the standards at the border for those agencies. The relevant Customs Regulations are in 19 CFR 12.73 and 12.80, copy enclosed. These regulations require that the importer obtain certification of statutory compliance from EPA and DOT for the U.S. Customs Service. Failure to obtain timely certifications is a breach of the performance bond which provides for the assessment of liquidated damages to compensate the Government for the breach. The Area Director of Customs at the port of entry, Newark, New Jersey, was informed by EPA that Mr. Nicosia failed to comply timely with the terms under which the vehicle was released to him. Accordingly, the Area Director of Customs

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C4

must issue a demand for liquidated damages under the bond against Mr. Nicosia and his surety, Washington International Insurance Company. Under 19 CFR 12.80(e), if the Area Director of Customs fails to receive a certification notice from the National Highway Transportation Safety Administrator, DOT, within 180 days after entry, the Area Director is required to demand redelivery of the motor vehicle. Failure to comply is a breach of the bond.

Although there is some evidence in correspondence from Ms. Kraus that the motor vehicle was scrapped, there is no evidence that EPA or DOT witnessed the scrapping operation or approved of the operation as a satisfaction of Mr. Nicosia's statutory obligations. In any event, the Customs Service, in its limited jurisdiction over this matter, has no choice but to follow the directions of EPA and DOT.

In view of the likelihood that liquidated damages will be assessed, the Customs Service, for obvious reasons cannot release Mr. Nicosia or his surety from the bond obligations. If liquidated damages are assessed, Mr. Nicosia and his surety have a right to petition for relief. The procedures with respect to those rights are set forth in 19 CFR 172.1-172.33, copy enclosed.

If we can be of any further assistance to you in this or any other matter, please call on us. We are forwarding a copy of this reply to: (1) Manufacturers Operations Divisions U.S. Environmental Protection Agency 401 M Street, SW., Washington, D.C. 20460; and (2) National Highway Traffic Safety Administration Department of Transportation 400 7th Street, SW., Washington, D.C. 20590.

Sincerely,

Michael H. Lane

ISSUE:

Is a process in which a number of imported tires are hydraulically compressed and banded with plastic tape a repair, alteration, or process within the meaning of item 864.05, Tariff Schedules of the United States (TSUS)?

FACTS:

Loose automobile tires are imported into the United States and taken to a processing facility for the purpose of compressing and banding them into sets of 10 tires. The compressed and banded tires are then sent to a foreign trade zone (FTZ) to be used in the manufacture of motor vehicles, thus cancelling the temporary importation bond pursuant to C.S.D. 84-97. The purpose of the tire banding is to facilitate storage and handling at the FTZ.

The tire banding operation itself is said to be performed by a metal holding machine into which 10 tires are manually rolled. A hydraulically operated compressor then compresses the tires while a banding machine threads and pulls plastic tape around the tires. This procedure is repeated four times. The bands are then crimped to provide the needed security. The process results in a set of compressed and banded tires that can more easily be stored and moved about the FTZ during production.

The banding machinery is said to have a value in excess of $400,000 and measures approximately 5 feet high and 15 feet long. Five U.S. workers are employed full-time in the banding operation and numerous other employees performing warehousing operations are indirectly involved. Approximately 250,000 tires compressed into sets of 10 are sent to the FTZ annually.

LAW AND ANALYSIS:

Item 864.05, TSUS, provides for the temporary admission free of duty under bond of articles to be repaired, altered, or processed (including processes which result in articles manufactured or produced in the United States).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C6

From the above definition it is clear that the processing required under this item may constitute a manufacture or production but may also fall short of manufacture or production and still be an admissable operation under the item. One of the definitions of the verb process is "to prepare for market, manufacture or other commercial use by subjecting to some process." (Webster's Third New International Dictionary Unabridged.) The same source gives as a definiton of the noun process "moving forward progressively from one point to another on the way to completion."

Applicant's operation as described in the facts involves two operations - compressing and bonding. Thus it is more than packing. However, it does not constitute a manufacture or a production. What the operation accomplishes is to make it possible for the tires to be stored and moved easily when used in the manufacture of automobiles, or put another way it makes an efficient manufacturing operation possible.

HOLDING:

The proposed operation is a process within the meaning of item 864.05, TSUS.

ISSUE:

Whether the failure to file a notice of intent to export, or get a waiver of that filing requirement, before merchandise is exported is fatal to a same condition drawback claim?

FACTS:

Six protests are involved. The protests are against denials of drawback which are based on failures to file a notice of intent to export, or to get waivers of that filing requirement, under 19 CFR 191.141. The regulatory requirement was published as T.D. 83-212 and was to take effect on December 12, 1983. Assuming that the documentary evidence in each of the six protests is sufficient to prove the exportation of the merchandise involved, there is no evidence that shows that any of the merchandise was exported before that date. This decision is limited to the consideration of the effect of 19 CFR 191.141 on drawback eligibility alone. There is no evidence that Customs waived the requirement before exportation.

LAW AND ANALYSIS:

The filing requirement of 19 CFR 191.141 was the subject of considerable controversy. In T.D. 83-212 (48 F.R. 46753, Oct. 14, 1983, 17 Cust. Bull. 465), at 17 Cust. Bull. 498-499, the purpose of the provision was stated. The Customs Service disagreed with the assertions that there was no authority to require prior notice and that prior examinations of merchandise were unnecessary.

A similar pre-export filing requirement was considered by the appellate court in U.S. v. Lockheed Petroleum Services, 1 Ct. Appls. Fed. Cir. 63, 709 F. 2d. 1472 (1983). That case concerned 19 CFR 22.4(g) (1982) which required a drawback claimant to file an abstract of manufacture before the vessel, on which drawback was to be based, left the U.S. At page 65 the court stated that drawback eligibility depended on the claimant's compliance with that requirement because the failure to comply deprived the Government of the ability to verify the contents of the abstract. The same reasons apply here. The failure to file the required notice of intent to export deprived the Government of the ability to verify the identity of the merchandise with that of the imported merchandise, and the condition of the merchandise that is to be exported.

In protest 3801-000414 the protestant asserts that an examination by a Customs officer on the date of exportation pursuant to the protestant's request to register foreign merchandise is compliance with 19 CFR 191.141. Examination on the date of

C8

PUBLIC

exportation is not notification five working days before exportation. In the case of Spencer, Kellogg and Sons, Inc., v. U.S., 13 Ct. Cust. Appls. 612, T.D. 41459 (1926), the court held that an oral notice, on February 20, to a Government inspector who was doing other work, that the drawback claimant expected to load merchandise for drawback at 8:00 a.m. on February 23 did not satisfy the regulatory requirement that written notice be filed with the collector at least 6 hours before lading of the merchandise and a copy of that notice be given to the Customs inspector at the place of lading. The merchandise was laded during the period from 3 p.m., February 22 to 6:30 a.m., February 23. The court held that the regulation requiring the notice of intent to export was mandatory, and could not be disregarded in favor of proving exportation by some other means. To similar effect is the court's decision in the case of Nestle's Food Co., v. U.S., 16 Ct. Cust. Appls. 451, T.D. 43199 (1929). There the claimant orally notified a Customs inspector at one pier of the export cargo's diversion to another pier when the regulations required written notice to the collector or to the inspector at the place of the actual lading in ample time to secure examination. The court found that as neither the collector or the inspector at the place of lading was told of the diversion, the merchandise was laded without Customs supervision. The court rejected the argument that the oral notification constituted substantial compliance with the regulation. The court in Swift and Co., v. U.S., 10 Cust. Ct. 198, C.D. 753 (1943), reh. den. 11 Cust. Ct. 321, abs. 49029 (1943), held that the failure to notify Customs of a diversion, when required to do so by regulation, was not compliance. It held that no compliance short of actual compliance could be regarded as sufficient compliance. The case of Swan Tricot Mills Corp. v. U.S., 63 Cust. Ct. 530, C.D. 3948 (1969) involves the application of a concept similar to the one advanced by the protestant here. In that case the drawback claimant asserted that a Customs inspector's examination to certify the exportation of bobbins temporarily entered under bond substantially complied with the regulatory requirements relative to rejected merchandise drawback as to the rejected yarn that was on the bobbins. The court rejected that argument. At page 534 of its opinion the court stated why an examination for a purpose other than drawback does not constitute substantial compliance with a regulatory procedure designed for drawback verification:

> For one thing, the yarn here involved was never returned to Customs custody for a drawback examination to determine whether or not it conformed to sample or specifications. In this connection it is important to observe that the Customs examination for drawback purposes is quite different from the examination to satisfy a temporary importation bond. In the examination for drawback purposes, it is essential to determine whether or not the merchandise conformed to sample or specifications. By contrast, in the examination to satisfy a temporary

218395

C9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

> importation bond, it is only necessary to determine what merchandise was laden aboard the vessel for export; hence, there is no need to determine whether the merchandise conformed to sample or specifications. This is illustrated by what occurred in the present case where the Customs inspector who inspected the merchandise to ascertain whether the temporary importation bond was satisfied made no effort to determine whether or not such merchandise conformed to sample or specifications. Nor was he supposed to, since his task was to determine what merchandise was exported.

That reasoning is equally applicable here with respect to the assertion that the certification on the registration form substantially complies with the regulatory requirement of 19 CFR 191.141.

The submission of waybills, particularly waybills which describe the cargo as packages "said to contain" certain merchandise, does not satisfy the requirement of 19 CFR 191.141.

In protest 3801-5-000826, the protestant asserted that the merchandise was examined by Customs prior to export and submitted copies of Canadian Customs and Excise forms in support of that assertion. Canada is not part of the United States. Examination of merchandise by Customs officers of another country in that country must occur after that merchandise leaves the United States. In any event, the United States Customs Service has not delegated same condition drawback examination authority to Canadian Customs officers. Such an examination by Canadian officials, even if it occurred, does not comply with the required procedure in 19 CFR 191.141.

HOLDING:

The failure to file a notice of intent to export, as required by regulation, or to get a waiver of that regulatory requirement, before the merchandise is exported is a basis on which to deny drawback.

ISSUE:

The issue is whether substituted merchandise that was exported prior to the effective date of the substitution same condition drawback law is eligible for drawback.

FACTS:

For purposes of this decision, it is assumed that all requirements of law (19 U.S.C. 1313(j)((3)) and the Customs Regulations (19 C.F.R. 191.141(h)) are met except that the substituted merchandise was exported prior to the effective date of the substitution same condition drawback law.

LAW AND ANALYSIS:

Section 202 of Public Law 98-573, dated October 30, 1984, amended the same condition (direct identification) drawback law, 19 U.S.C. 1313(j). Generally, the amendment allows same condition substitution drawback within a 3 year time limitation upon the exportation or destruction of merchandise (whether imported or domestic) that is substituted for imported duty-paid merchandise provided that the substituted merchandise is fungible with such imported duty-paid merchandise, that it is in the possession of the party claiming drawback, that it was not used in the United States before exportation or destruction, and that it is in the same condition at the time of exportation or destruction as was the imported duty-paid merchandise at the time of its importation.

In Customs Service Decision (C.S.D.) 85-34, dated February 5, 1985, we noted that under Section 214 of Public Law 98-573, the amendment (Section 202) became effective on November 14, 1984, the 15th day after enactment. However, in C.S.D. 85-34, we ruled, in part, that imported duty-paid merchandise imported before the effective date (November 14, 1984) may be designated for drawback, provided of course, that all other requirements of law including time limitations are met. The ruling cited and followed the decision of the Customs Court in General Motors Corporation v. United States, 32 Cust. Ct. 94, C.D. 1587 (1954).

The Court decision is cited to support a position that C.S.D. 85-34 should be expanded to include exportations of merchandise that were made prior to the effective date for the substitution same condition drawback law. We do not agree. In its decision, the Court went on to address this question and clearly answered in the negative.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The General Motors Corporation decision concerned Public Law 109, effective August 8, 1951, which extended the privilege to substitute certain merchandise for imported duty-paid merchandise used in the manufacture or production of articles within certain time limitations and exported for drawback. Although Section 202 of Public Law 98-573 concerns substitution same condition drawback rather than substitution manufacturing drawback under Public Law 109, the issues concerning designation of merchandise and the exportation of merchandise prior to the effective dates are identical. We agree with the decision of the Court in General Motors Corporation in holding that merchandise imported prior to the effective date of August 8, 1951, may be designated for drawback. In this regard, the Court stated at page 96 that "A mere reading of the statutory provision shows this to be so."

However, the Court went on to state in General Motors Corporation at page 96 that "Quite obviously, the statute could be effective only as to exportations made on or after August 8, 1951 ...." Further, the Court continued and ruled out retroactive substitution when it stated at page 98 "Clearly, there was no accruing right, prior to August 8, 1951, as to the imported steel herein to have substituted for it, with benefit of drawback, domestic merchandise of the same class or kind." The Court, as we did in C.S.D. 85-34, extended retroactive status only to the designation of imported duty-paid merchandise as the basis for drawback (refund of duty) and did not extend retroactive status to exportations or substitutions. In the absence of a legislative mandate, we have no authority to do so.

HOLDING:

Exportations and/or substitutions made prior to the effective date (November 14, 1984) of Section 202, Public Law 98-573 (19 U.S.C. 1313(j)(3)) are not eligible for substitution same condition drawback.

EFFECT ON OTHER RULINGS:

This ruling supplements C.S.D. 85-34.

C12

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

03 JAN 1986

REFER TO

DRA-1-09-CO:R:CD:D
218493 RB

Issue: Are "articles of domestic manufacture or production" under 19 U.S.C. 1309(b) eligible for drawback pursuant to the substitution provision of the same condition drawback law, 19 U.S.C. 1313(j)(3)?

Facts: Jet fuel produced in the United States is laden as fuel supplies on foreign aircraft operating in international traffic. Drawback is sought to be claimed on this jet fuel under the substitution provision of the same condition drawback law, section 1313(j)(3), imported, duty-paid jet fuel fungible therewith forming the basis for the claim.

In addition to fungibility, it is presumed that any other statutory and regulatory requirements applicable to substitution same condition drawback not in issue herein would also be satisfied.

Law and Analysis: 19 U.S.C. 1309(b) provides in pertinent part that "articles of domestic manufacture or production" laden as supplies upon foreign vessels or aircraft may, under certain conditions, be considered exported for drawback purposes. Section 1309(b) in effect furnishes a statutory means of fulfilling the requirement of exportation in the context of the drawback law. Without this provision, the mere act of lading products of domestic manufacture as supplies on a foreign vessel or aircraft would not otherwise constitute an exportation (see Swan and Finch Co. v. United States, 190 U.S. 143, 145; 17 Op. Atty. Gen. 579, 583; 19 CFR 101.1(k)).

As originally included in section 1309(b), enacted as section 309(b) of the Tariff Act of 1930 on June 17, 1930, it is clear that the expression "articles of domestic manufacture or production" exclusively means articles which are manufactured or produced in accordance with the manufacturing drawback law, as amended, 19 U.S.C. 1313(a) and (b), and applicable regulations, and which are thus intended to qualify for drawback on this basis, sections 1313(a) and (b) being the only provisions to which section 1309(b) could have referred at the time of its original enactment (see H. Rept. 7, 71st Cong., 161-162 (1929)).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C13

19 U.S.C. 1313(j)(3), the substitution same condition drawback law, enacted as section 202 of Public Law 98-573, the Tariff and Trade Act of 1984, and effective on November 14, 1984, provides in pertinent part that imported, duty-paid articles may, under certain conditions, form the basis of a claim for drawback on other imported or domestic articles fungible therewith, when the latter are exported.

It is apparently desired that section 1309(b) be read in pari materia with section 1313(j)(3), and, as a result, that "articles of domestic manufacture or production" in section 1309(b) be considered exported for purposes of section 1313(j)(3).

The doctrine of in pari materia, however, is resorted to only in cases where the meaning of a statute is ambiguous or doubtful (Northern Pac. Ry. Co. v. United States, 156 F.2d 346, 350 (7th Cir. 1946), aff'd 330 U.S. 248). Because the meaning intended by "articles of domestic manufacture or production" in section 1309(b) is clear, as noted above, the application of this rule of statutory construction in the present case would be unwarranted and incorrect. Inasmuch as section 1309(b) is not specifically amended by section 1313(j)(3), "articles of domestic manufacture or production" as used therein should therefore properly retain the meaning intended at the time of its original enactment (see Manry v. Robison, 56 S.W.2d 438, 447 (Tex. 1932); also note Gemsco v. Walling, 324 U.S. 244, 265).

Furthermore, Customs has previously held, correctly, that imported, duty-paid articles may not themselves be considered exported under section 1309(b) and directly claimed for same condition drawback under 19 U.S.C. 1313(j)(1) (section 201 of Public Law 96-609, effective on December 23, 1980), same condition drawback not being provided for in connection with section 1309(b) (Headquarters letter dated November 28, 1983, file CON-13-01, DRA-1-CO:R:E:E 722625; and cf. Atlas Marine Supply Co. v. United States, C.D. 549). Hence, to permit such articles to form the basis for same condition drawback on other (substituted) articles, when, in identical circumstances, they could not qualify for same condition drawback themselves, would be contradictory and anomalous. "And we should discard any construction that would lead to absurd consequences" (Oates v. National Bank, 100 U.S. 239, 244).

Accordingly, "articles of domestic manufacture or production" as set forth in section 1309(b) cannot be considered exported thereunder for purposes of substitution same condition drawback, section 1313(j)(3).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

218193

C14

Holding: "Articles of domestic manufacture or production" under 19 U.S.C. 1309(b) are not eligible for drawback pursuant to the substitution provision of the same condition drawback law, 19 U.S.C. 1313(j)(3).

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

17 MAR 1986

REFER TO

DRA-1-CO:R:CD:D
218541 K

Mr. W. E. Weeks
Executive Vice President
Texas Citrus and Vegetable
Import Association
6912 West Expressway 83
Harlingen, Texas 78552-3701

Dear Mr. Weeks:

In your letter of January 8, 1986, you submitted a list of 87 fresh fruits and vegetables ranging from apples to zucchini and suggested that the "Good Delivery Standards" of the regulations of the Department of Agriculture (7 CFR 46.44) should be used to show that fresh fruits and vegetables meet the fungibility test of the substitution same condition drawback law (19 USC 1313(j)).

In your letter, you correctly stated the purpose of the Perishable Agricultural Commodities Act (7 USC 499a-o) is "to suppress unfair and fraudulent practices in the marketing of fresh and frozen fruits and vegetables in interstate commerce." The Act requires that commission merchants, dealers, and brokers must obtain a license and the regulations provide for the means of enforcing the provisions of the Act.

The substitution same condition drawback law (19 USC 1313(j)(3)) requires that the substituted merchandise must be "fungible with such imported (designated) merchandise." Section 191.2(l) of the Customs Regulations defines the term "Fungible merchandise" as "merchandise which for commercial purposes is identical and interchangeable in all situations." Our cursory review of the Perishable Agricultural Commodities Act and applicable regulations of the Department of Agriculture does not reveal a basis to support fungibility for one batch of apples as compared with another batch of apples. Good delivery simply means that there must be compliance with contracts for fresh fruits and vegetables. The quality standards, if any, may be set in individual contracts.

The Department of Agriculture does inspect and grade fruits and vegetables. You imply that the produce industry does not sell and buy fruits and vegetables in accordance with these grades. However, contracts under the "Good Delivery Standards" may, of course, require quality standards of the Department of

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D2

Agriculture. Although the quality standards are not proof positive that two batches of apples may be fungible in all commercial transactions, those standards may be considered along with other information.

The quality standards for fresh fruits and vegetables of the Department of Agriculture are found in 7 Code of Federal Regulations beginning with section 51.100. Sections 51.300 through 51.347 contain the standards for grades of apples. Obviously, U.S. Extra Fancy apples are not fungible with U.S. number 3 apples. Note that the regulations indicate over 40 varieties of apples. One variety is not fungible with another variety. It is more than probable that a batch of imported Black Ben apples and a batch of substituted Black Ben apples, both of which meet the U.S. Extra Fancy grade, are of the same color requirements, and are of same sizes, etc., would meet the fungibility requirements. The burden of proof of fungibility is on the drawback claimant. Evidence to substantiate fungibility may be submitted with the drawback entry for the consideration of the drawback liquidator.

Fresh fruits and vegetables are excluded from the provisions of substitution same condition drawback. However, it may not be practical for perishable goods and the enormous differences in varieties and grades of fresh fruits and vegetables with a limited life span. The substitution same condition drawback law is practical for controlled manufactured goods such as assembly or replacement parts that are made with the use of identical materials and specifications. The substitution same condition drawback law fits a narrow set of facts.

You referred to Customs Service Decision 85-34 which contains guidelines for substitution same condition drawback. Enclosed for your information is a copy of T.D. 85-123 which contains the applicable Customs Regulations for substitution same condition drawback.

Sincerely,

Edward B. Gable, Jr.
Director, Carriers,
Drawback and Bonds Division

ISSUES:

1. May merchandise, transferred from the Customs territory to a foreign trade zone for manufacturing, be considered exported for drawback purposes?

2. May the articles manufactured in the foreign trade zone from the transferred merchandise be admitted to the Customs territory upon payment of the proper duty?

FACTS:

The request is to transfer to a foreign trade zone merchandise which would be entitled to drawback if exported, to have this merchandise considered exported, and to use the merchandise in the zone in the manufacture of motor vehicles for exportation and domestic consumption.

LAW AND ANALYSIS:

19 U.S.C. 81c states in pertinent part that:

> "Foreign and domestic merchandise of every description, except as prohibited by law, may, without being subject to the Customs laws of the United States except as otherwise provided in this chapter, be brought into a zone .... ."

On the basis of this language C.S.D. 84-97 (also published as C.S.D. 85-10) permitted merchandise processed under item 864.05 (TSUS) to be brought into a foreign trade zone for use in manufacturing and to be considered exported for Customs purposes (except when otherwise indicated in the Foreign Trade Zones Act).

Merchandise not under the restrictions of a temporary importation bond may also be transferred to a foreign trade zone on the basis of the language from 19 U.S.C. 81c, quoted above. However in this situation the transferor has the option of using the second proviso of 19 U.S.C. 81c and claiming domestic status for the merchandise. If transferor uses this option, obviously

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D4

the merchandise will not be considered exported and no drawback will be paid on it. Use of the second proviso is optional, however, as made clear by both the second and third provisos. Thus if the transferor chooses to place merchandise in foreign status, it may do so, in which case the merchandise when used in manufacturing will be considered exported for Customs purposes (except when otherwise indicated in the Foreign Trade Zones Act). The new and different articles which result from the use of the merchandise in manufacturing will then, upon payment of proper duty, be admitted to the Customs territory.

HOLDING:

1. Merchandise transferred to a foreign trade zone for manufacturing and placed in foreign status is considered exported for Customs purposes and is eligible for drawback if all other conditions are met.

2. The new articles resulting from manufacture in the zone may be admitted to the Customs territory upon entry and payment of proper duty.

DEPARTMENT OF THE TREASURY
U.S. CUSTOMS SERVICE
WASHINGTON, D.C. 20229

26 MAR 1986

REFER TO
DRA-1-CO:R:CD:D
218613 SMC

ISSUES:

Whether drawback may be claimed under title 19, United States Code, section 1313(a), on the exportation of:

1) eggs produced in the U.S. by chickens that were fed imported chicken feed;

2) whole chickens or parts thereof that were bred from infancy in the U.S. on imported feed; or

3) products such as fertilizers that were manufactured or produced with the use of parts from slaughtered chickens (i.e. blood, bone, viscera) which had been bred in the U.S. on imported feed.

FACTS:

An egg producer in the U.S. contemplates the exportation of frozen eggs. The eggs were produced in the U.S. by chickens that were bred on imported chicken feed upon which duty was paid. In those situations where chickens are no longer of egg producing age, they are slaughtered and exported in whole or in part. When a chicken is slaughtered, very little if any of the chicken is wasted. Various parts such as the blood, bone, and viscera are sold to manufacturers in the U.S. for use in the manufacture of products such as fertilizers. These end products are then exported from the U.S.

LAW AND ANALYSIS:

Section 313(a) of the Tariff Act of 1930, as amended (19 U.S.C. 1313(a)) requires the use of imported merchandise in the manufacture or production of the exported articles. With respect to the first statutory requirement under this section of the drawback law, the "use" requirement, it must be established whether the imported feed is used in the manufacture or production of the exported articles.

In a previous case in which Customs was asked to rule, feed or grain was also involved. The grain was imported and fed to

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

hogs. After being slaughtered, the hams produced from the hogs were exported. It was ruled that where hogs are raised with the use of imported duty-paid grain, hams obtained from such hogs are produced in the United States with the use of imported merchandise within the meaning of the drawback law, and that drawback is allowable upon the exportation of the hams. (DB731, November 29, 1967)

In another case, cells from the kidneys of imported monkeys were grown, being fed with a high nutrient culture media. When the cells reached maturity, polio virus was added to them, permitting the proliferation of the virus in the living cells. The polio vaccine produced therefrom was exported and drawback was allowed. (C/L DB731, July 1, 1959)

The question of whether lactose was used in the manufacture of penicillin was addressed by Customs in another case. Lactose was mixed into a slurry with several other materials. The slurry was then inoculated with an organism after which the lactose was entirely consumed or metabolized by the growing mold organism. It was determined that the lactose was "used" as required by statute to feed the organism which formed the penicillin that was exported.

In order to meet the "use" requirement, it has been established that it is not necessary for any of the imported merchandise to actually appear in the exported article. The test is whether the imported merchandise was used in, that is, consumed in the manufacture or production of the article.

The second statutory requirement which must be met for drawback to be payable, is whether a manufacture or production has taken place. Whereas manufacture describes man-made changes in the essential character of an article or raw material, production describes either changes that are man-induced, natural phenomena (such as growth in living tissue) or changes in condition (shape, size, etc). The definition that Customs has followed is that a manufacture or production occurs when a new and different article emerges from the processing, having a distinctive name, character, or use. (see Anheuser-Busch Brewing Association v. United States, 207 U.S. 556(1907)).

It can be concluded that the proposed processes all involve the use of imported grain, as it is completely consumed by the

219613

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D7

chickens which are bred in the United States. Each process results in the production of articles with distinctive names, characters, or uses from the imported merchandise.

HOLDING:

Drawback is payable under section 1313(a), title 19, United States Code upon the exportation of:

1) eggs produced in the U.S. by chickens that were fed imported chicken feed;

2) whole chickens or parts thereof that were bred from infancy in the U.S. on imported feed; or

3) products that were produced with the use of chicken parts from slaughtered chickens which had been bred in the U.S. on imported feed.

The Collector of Customs,

New York, N. Y.

T.D. 49801-H

Sir:

T. D. 47668-J, as extended by T. D. 48792-C, providing for the allowance of drawback on imported laces, lace articles, nettings, veils, veilings, mousseline de soie, voiles, malines, embroideries, motifs, braids, silk dress trimmings and scarfs which are bleached and/or dyed or redyed, or stripped and redyed by the Eagle Lace Dyeing Co., New York, N. Y., is hereby further extended to cover imported tablecloths, napkins, bedspreads and curtains which are dyed or redyed by the aforementioned company.

The manufacturer has filed a supplemental sworn statement, subscribed to December 9, 1938, in accordance with the provisions of paragraph (k) of article 1043, Customs Regulations of 1937, describing the methods which it will follow and the records which it will keep for the purpose of establishing that the articles described therein have been manufactured with the use of properly identified imported merchandise in accordance with the provisions of section 313(a) of the tariff act and the regulations (art. 1041). The manufacturer shall follow the methods described and shall keep the records outlined in this supplemental sworn statement, a copy of which is inclosed for your information.

Drawback may be allowed under this extension, upon compliance with the law and regulations, on the products referred to which are exported on and after November 19, 1938. In cases where the imported merchandise was imported on or after June 18, 1930, exportation shall be made within three years after importation of the imported merchandise, except as provided for by T. Ds. 46089, 46823, 47562, 48159, 48773 and 49344.

There is also inclosed for your information and files a copy of the report of the supervising customs agent, New York, N. Y., dated December 14, 1938, file 1-3507, relating to this matter.

Very truly yours,

(Signed) J. M. Wells

TD54121-6

278602

Dear Mr. Dill:

You are hereby authorized to allow drawback upon compliance with the provisions of section 313(b), Tariff Act of 1930, and the drawback regulations (Part 22 of the Customs Regulations), on titanium and titanium alloy ingots, slabs, blooms, billets, bars, sheet bars, strip, sheet, coiled sheet and mill products manufactured by Sharon Steel Corporation, Sharon, Pennsylvania, at its factories located at Farrell and Sharon, Pennsylvania, Lowellville, Niles, and Warren, Ohio, and Detroit, Michigan, with the use of titanium sponge and titanium and titanium alloy products manufactured from titanium sponge. Insofar as the applicant's Niles, Ohio, factory is concerned, this authorization is limited to articles manufactured between October 10, 1955, and January 2, 1956, it being shown in the file that operations at the said factory have been conducted subsequent to the latter date by another corporation.

The manufacturer has filed a statement subscribed to on ~~December~~ July 3, 1956 31, 1955, in accordance with the provisions of section 22.4(h) of the Customs Regulations, describing the methods which it will follow and the records which it will keep for the purpose of establishing that the articles described therein have been manufactured in accordance with the provisions of section 313(b) of the tariff act and the regulations (sec. 22.5). The manufacturer shall follow the methods described and shall keep the records outlined in this statement, a copy of which is enclosed for your information.

The said records shall show:

(1) The quantity, identity, kind, and quality of the imported titanium sponge and of the titanium and titanium alloy products manufactured under drawback regulations from titanium sponge, which will be designated as the basis for the allowance of drawback on the exported articles;

(2) That such designated merchandise has been used in manufacture within 3 years from the date on which it was received by the above-named company;

(3) That the exported products upon which drawback is claimed were manufactured with the use of merchandise of the same kind and quality as that designated as the basis for the allowance of drawback on such exported articles;

Dil

(4) That the exported articles were manufactured within 3 years from the date on which the designated merchandise was received by the above-mentioned company;

(5) That duty-free or domestic merchandise of the same kind and quality as that designated was used in manufacture within a period not to exceed 3 years from the receipt of the said designated merchandise; and

(6) The quantity of titanium sponge and titanium and titanium alloy products, of the same kind and quality as that designated, which appears in the exported articles.

Exportation shall be made within 5 years after importation of the imported merchandise, except that exportation shall be made within 3 years if the merchandise was imported before September 7, 1950.

The quantity of imported titanium sponge and of titanium and titanium alloy products manufactured under drawback regulations from titanium sponge, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity thereof equivalent to the quantity of titanium sponge and of titanium and titanium alloy products, of the same kind and quality as that designated, which appears in the exported articles, as shown by an abstract of the manufacturing records which shall be filed with the drawback entry.

Drawback may be allowed hereunder, upon compliance with the law and regulations, on the articles covered hereby which are manufactured on and after October 10, 1955, and exported on and after October 11, 1955. Exportation shall be made within 5 years after importation of the imported merchandise, except that exportation shall be made within 3 years if the merchandise was imported before September 7, 1950.

Very truly yours,

Hon. Robert W. Dill
Collector of Customs
New York 4, New York

Enclosure No. 58138

[redacted]

D12

712.11 279470

SEP 29 1955

Dear [redacted]

Reference is made to your letter of September 8, 1955 (EM:cjr), inquiring (1) whether peanuts imported in the shell may be taken into a customs bonded manufacturing warehouse under the provisions of section 311, Tariff Act of 1930, for the purpose of being shelled, roasted, and salted, and subsequently exported, and (2) whether such peanuts would be subject to the quota limitations established by the President's proclamation of June 8, 1953, as amended and modified (T. Ds. 53289 and 53808).

The roasting and salting of nuts is considered by the Bureau to be a process of manufacture for drawback purposes under section 313 of the said tariff act (note, for example, T. Ds. 52765-J, 53196-B, and 53744-A), and would also be considered a process of manufacture for bonded manufacturing warehouse purposes under section 311.

You are accordingly advised that peanuts imported in the shell may be taken into a bonded manufacturing warehouse under the provisions of section 311 for the purpose of being shelled, roasted and salted, and subsequently exported. No withdrawal of the peanuts for consumption would be permitted (section 19.15(a) of the Customs Regulations), but the shells obtained in processing would be regarded as a waste and destruction thereof permitted under customs supervision in accordance with the second proviso contained in the fifth paragraph of section 311.

Imported peanuts taken into a bonded manufacturing warehouse for use in manufacture and exportation under section 311 would not be subject to the quota limitations referred to above, as the quota limitations apply only to entries, or withdrawals from warehouse, for consumption.

Very truly yours,

Signed) W. E. Higman

Dear Mr. Stramiello:

You are hereby authorized to allow drawback upon compliance with the provisions of section 1313(t), title 19, United States Code, and Part 22 of the Customs Regulations, on pulverized resins manufactured by Union Carbide Corporation, New York, New York, at its Bound Brook, New Jersey, factory with the use of coarse crushed resin.

There is enclosed, approved, a copy of the manufacturer's drawback statement subscribed to on November 29, 1966, requesting the foregoing action and containing the manufacturer's proposals as to the procedures it will follow and the records it will keep. Such records shall include those prescribed in section 22.5(a)(1) through (6) of the Customs Regulations.

The quantity of coarse crushed resin manufactured under drawback regulations, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder, shall not exceed a quantity thereof equivalent to the quantity of such merchandise of the same kind and quality as that designated, which was used in manufacture of the exported articles as shown by an abstract of the manufacturing records, which shall be filed with the drawback entry.

Drawback may be allowed hereunder, upon compliance with the law and regulations, on the articles covered hereby, which are manufactured and exported on and after July 28, 1966. Exportation shall be made within 5 years after importation of the imported merchandise.

In accordance with the recommendation of the investigating agent, the first claim for drawback filed under this authorization shall be forwarded to the customs agent in charge, New York, New York for verification.

Internal Advice Request 118/82, Dutiable Status of "ECGD" Premiums

542857

This is in reference to your memorandum dated July 1, 1982, involving the above-captioned matter.

ISSUE:

Whether certain insurance premiums incurred by the British supplier to ensure against non-payment by a foreign buyer, passed through to the United States importer as part of a CIF duty-paid price, are dutiable under transaction value.

FACTS:

An agency of the British Government, the Export Credit Guarantee Department, offers an insurance policy ("ECGD") to exporters of British merchandise which guarantees 90 percent payment on their overseas shipments in the event of default or bankruptcy of the foreign buyer, import restrictions in the buyer's country, etc. A premium is charged to the supplier based on the value of the individual overseas shipment.

The British supplier sold the subject merchandise to the importer on a CIF, duty-paid basis, and included the premium charge as part of the invoice price. The broker now claims that such charge is an item of insurance as

E4

RELEASED TO THE PUBLIC

provided for in section 402(b)(4)(A), Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), and therefore it should be disregarded in determining transaction value.

LAW AND ANALYSIS:

Section 402(b)(1), TAA, provides in pertinent part that the transaction value of imported merchandise is the price actually paid or payable for the merchandise when sold for exportation to the United States. Section 402(b)(4)(A) provides that the term 'price actually paid or payable' means the total payment (whether direct or indirect, and exclusive of any costs, charges, or expenses incurred for transportation, insurance, and related services incident to the international shipment of the merchandise from the country of exportation to the place of importation in the United States) made, or to be made, for imported merchandise by the buyer to, or for the the benefit of, the seller. Emphasis added.

The broker argues that ECGD is an item of insurance, and as such is provided for under section 402(b)(4)(A), which excludes insurance per se as a non-dutiable cost, because it is in fact an item incident to the international shipment of merchandise from the country of exportation to the place of importation in the United States.

On the other hand, you point out that the ECGD charge is in addition to the usual marine insurance, and has nothing to do with the international shipment of the goods. This charge merely ensures the reception of payment by the seller. Therefore, you believe that the ECGD charges are dutiable under transaction value since they are part of the price actually paid or payable and are not the type of insurance to be disregarded under section 402(b)(4)(A).

MAY BE RELEASED TO THE

542857

HOLDING:

The documentation describing the "ECGD" clearly establishes that this insurance does not cover risks involved in the international shipment of the merchandise, nor is the charge in some manner incurred for transportation and related services incident to such international shipment. Rather, the premiums merely ensure payment for the goods in case of default, etc., by the buyer.

Under these circumstances, we find such costs to be part of the "price actually paid or payable for the merchandise", and therefore dutiable charges under transaction value.

(Signed) Irving W. Smith, Jr.

Re: Application for Further Review of Protest No. 1001-3-007383

Dear Sir:

The above-referenced protest concerns the valuation of butanediol shipped in bulk by tanker from Belgium to the United States and purchased by GAF Corporation (importer) from GAF (Belgium) N.V.

The merchandise was appraised under transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), at the total invoice price of D.M. 3,434,353.47 (U.S. $1,429,313), which was based upon a unit price of D.M. 3.27 per kg. for a quantity of 1,050,261 kg. The shipping terms were FOB Antwerp, Belgium.

Protestant (importer's customhouse broker) contends that although 1,050,261 kg. of butanediol were ordered by the importer, the actual quantity received by the importer at the time of offloading in the United States was 1,047,034 kg. Therefore, protestant contends that an adjustment should be made to the appraised value of the imported merchandise to account for the difference between the quantity ordered and the quantity delivered.

In the opinion of your office, there is no legal authority under the TAA for making an adjustment to the invoice price to compensate for a deficiency between the quantity delivered and the quantity ordered. We understand that your office requested proof of payment for the imported merchandise from the importer but that no such evidence was provided.

As you know, transaction value is defined in section 402(b) as the price actually paid or payable for the imported merchandise when sold for exportation to the United States, plus amounts for certain items when not already included in that price. It appears that the only evidence available to us in this case regarding the "price actually paid or payable" for the imported butanediol consists of the

543428

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E7

commercial invoice between the parties which reflects a total price of $1,429,313. There is no evidence that a lesser amount was actually paid due to the shortfall in the quantity of merchandise delivered. In fact, the protestant does not allege that an amount different from the total price reflected on the invoice was paid for the imported merchandse.

In the absence of any other evidence of the price actually paid or payable for the imported butanediol, we believe that transaction value is properly represented by the total invoice price for the merchandise.

Accordingly, you are directed to deny the protest in full. A copy of this decision should be attached to the Form 19, Notice of Action, to be sent to the protestant.

Sincerely,

(Signed) Harvey B. Fox

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: OCT 23 1985

FILE: CLA-2 CO:R:CV:V
543445 CW

TO : District Director of Customs
Chicago, Illinois 60607

FROM : Director, Classification and Value Division
Headquarters

SUBJECT: Internal Advice No. 107/84; Valuation of Automobile Engines Purchased by

This refers to your letter of September 14, 1984, received in this office on November 11, 1984, which forwarded the above-referenced internal advice request initiated by (the importer). The issue presented for consideration concerns whether amounts paid by the importer to the manufacturer a related company, for failure to purchase a contracted minimum quantity of engines are dutiable as part of transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

The record reflects that the importer and the manufacturer entered into a contract for the purchase of diesel engines and a contract for the purchase of gasoline engines with respect to model years 1983 through 1985. Both contracts provide that a minimum quantity of engines shall be purchased by the importer for each year of the contract. If the minimum number of engines is not purchased during a particular year, the contracts state that the importer shall pay the manufacturer additional compensation equal to a certain amount for each engine below the contracted minimum quantity that is not purchased. The contracts further provide that if purchases exceed a certain quantity during the life of the agreements, the importer shall receive a "special volume discount," payable within 60 days after that quantity is purchased.

During the 1983 model year, the importer purchased no diesel engines and fewer than the specified minimum quantity of gasoline engines. As a result, the importer was required by the contracts to pay the manufacturer certain additional compensation the precise amount of which was subsequently determined pursuant to a settlement agreement between the parties dated February 21, 1984.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E9

Counsel for the importer refers to the additional compensation as "liquidated damages" and maintains that these amounts are not part of the price actually paid or payable for the imported merchandise under several alternative theories. First, counsel contends that because the additional amounts were paid in connection with engines that were never sold or imported, these amounts are not dutiable as they do not relate to the engines that were imported. Counsel also maintains in this regard that the specific pricing formula set forth in the contracts for engines which were imported was separate from the liquidated damages contractural provision which related only to engines that were not purchased. Secondly, counsel states that even assuming that the additional payments affect the price of the imported merchandise, the payments must be disregarded since they represent changes to the price which are arrived at subsequent to the time of importation. Counsel points out in this connection that the Statement of Administrative Action relating to the TAA provides as follows:

> Changes in a price actually paid or payable which are arrived at subsequent to the time of importation shall not be taken into account in determining a transaction value.

Your office agrees with the importer's position that the additional compensation is not part of transaction value. In the opinion of your office, the additional payments are "not attributable to any particular importation" but, rather, they accrue "on the non-importation of merchandise." Moreover, according to your office, the subject compensation appears to be "simply a contractural obligation that is separate and distinct from the import transaction."

The Chief, Commercial Operations Branch I, New York Seaport, points out in a memorandum of October 31, 1984, that because the record before us does not address the issue of the acceptability, under section 402(b)(2)(B) of the TAA, of the transfer prices between the related parties, transaction value has not been established. Concerning the compensation paid to the manufacturer due to the failure of the importer to purchase the contracted minimum quantity of gasoline engines, the Chief of the Commercial Operations Branch I concludes that these amounts are part of the dutiable value of the imported merchandise under section 402(f) of the TAA. This conclusion is based upon the following analysis:

543445

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

> The base selling price of the engines is subject to adjustments. All these adjustments are based upon delivery dates and numbers purchased. It is our opinion that these are not transfer prices or estimates envisioned by TAA #25; nor can these adjustments be termed 'retroactive.' It is our opinion that the price paid or payable is arrived at in terms of the full value of the three-year contract and is not divisible in terms of invoice unit values.

We note initially that your office has not raised or otherwise addressed the issue of the acceptability of the transfer prices between the related parties in this case. As there is insufficient information in the record for us to make a determination regarding this issue, we will assume, for purposes of this decision, that your office is satisfied that the agreements between the parties reflected arms-length negotiations and, therefore, that the transfer prices are acceptable within the meaning of section 402(b)(2)(B) of the TAA.

As you are aware, the words "price actually paid or payable" in the definition of transaction value are themselves defined in section 402(b)(4)(A) of the TAA as:

> ... the total payment (whether direct or indirect ...) made, or to be made, for imported merchandise by the buyer to, or for the benefit of, the seller.

We believe it is significant that the gasoline purchase agreement refers to a "base selling price," which is the unit price reflected on the invoices that accompanied the engine shipments to the United States. As explained earlier, the agreement provides that if the importer fails to purchase the specified minimum quantity of engines in any given model year, the importer shall pay the manufacturer, in addition to the "base selling price," "a compensation amounting to" a certain amount for each engine below the specified minimum quantity that is not purchased during that model year. In our opinion, the term "base selling price" clearly implies that it is not a firm price but is subject to certain adjustments such as the additional compensation required in the event the minimum quantity of gasoline engines is not purchased. Thus, the agreement essentially provides that the

543445

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E11

final unit purchase price for the engines that are purchased during a model year will not be known until the the number of engines actually purchased during that year is known. This conclusion recognizes that in many business transactions the quantity of merchandise purchased is a significant factor in the determination of the unit price for that merchandise.

Consequently, while the additional compensation required as a result of the importer' failure to purchase the contracted minimum quantity of engines was computed on the basis of a specific amount for each engine below the minimum quantity that was not purchased, we believe that, for the reasons explained above, there is a direct relationship between this additional compensation and the gasoline engines that were purchased (and imported). Therefore, we conclude that the additional compensation required in connection with the purchase of gasoline engines during the 1983 model year is properly part of the price actually paid or payable for the imported gasoline engines.

We also disagree with the alternative argument advanced by counsel for the importer that the additional compensation must be disregarded since it represents a change in the price which was arrived at after the merchandise was imported. We have consistently held in this regard (see TAA #47 and rulings dated September 13, 1984 (543358), and March 30, 1984 (543252)), that where the buyer and seller agree, prior to exportation of the merchandise, to a fixed formula pursuant to which adjustments, either upward or downward, are to be made to the invoice price, those adjustments will be taken into consideration in determining the price actually paid or payable. The "base selling price" and the adjustments thereto set forth in the gasoline purchase agreement clearly were agreed to prior to exportation of the engines to the United States.

However, it is also clear that the settlement agreement was entered into subsequent to the importation of the gasoline engines during the 1983 model year. As we have no reason to believe that the parties did not view the pricing formula set forth in the purchase agreement as representing a fixed formula at the time the agreement was executed, we believe that a price determined in accordance with that formula constitutes the "price actually paid or payable for the merchandise when sold for exportation to the United States." (Emphasis added; see TAA #48). Thus, the amount of

543445

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

the additional compensation to be included in transaction value should be calculated on the basis of the provisions of the gasoline engine purchase agreement rather than on the basis of the provisions of the settlement agreement. This amount should be apportioned equally over the number of engines actually imported during the 1983 model year.

In regard to the amounts that were paid by the importer to the manufacturer in connection with the failure of the importer to purchase any diesel engines during the 1983 model year, we agree with counsel for the importer that these amounts are not dutiable inasmuch as the diesel engines were subject to a separate purchase agreement and none were, in fact, imported.

SUBJECT: Internal Advice No. 113/84; Valuation of Automobile Engines Purchased by

This is in reference to your memorandum of October 3, 1984, received in this office on November 28, 1985, which forwarded the above-referenced internal advice request initiated by (the importer). The issue under consideration concerns whether amounts paid by the importer to the seller, a related company, as a result of the importer's failure to purchase a contracted minimum quantity of engines are dutiable as part of transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA).

The facts are that in 1978 the importer and manufacturer entered into an engine purchase agreement which provided that the importer would purchase a specified minimum quantity of engines for each model year from 1981 through 1985. If the importer failed to purhase the minimum quantity during any one of those model years, the agreement required the importer to pay the seller liquidated damages equal to 22 percent of the engine price in effect on March 1 of the applicable model year "multiplied by the number by which (the importer's) purchases of engines is less than" the minimum quantity for that year. According to the agreement, the 22 percent figure consists of a 4 percent non-reimbursable amount and an 18 percent amount which would be repaid by the seller in subsequent years to the extent that the importer purchased more than the mimimum number of engines in those later years.

Because the importer did not purchase the minimum number of engines during the 1981 model year, it was required to pay the seller in excess of $9 million in liquidated damages. In the opinion of your office, the unit price reflected in the invoices which accompanied the engine shipments to the United

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E14

States was based on a quantity discount given in anticipation of purchases of a specified minimum quantity. Consequently, when the importer failed to qualify for this discount price, additional payments became due as provided for in the purchase agreement. Generally speaking, your office believes that these additional payments are dutiable as part of transaction value. However, you indicate that if the 18 percent reimbursable amount is subsequently repaid by the seller, that amount should not be dutiable.

Counsel for the importer contends that the liquidated damage payments are not part of the price actually paid or payable for the imported merchandise for the reason that these payments relate to engines that were not purchased rather than to engines that were purchased and imported. Counsel further maintains that a review of the agreement itself indicates that the parties did not intend for the liquidated damages to be part of the price paid or payable for the engines. Counsel states in this regard that Part 3 of the agreement, entitled "Prices and Payment," sets forth the actual pricing for the engines while Part 2, a totally separate provision from the pricing portion of the agreement, provides for the payment of damages in the event minimum quantities are not purchased. Finally, counsel states that even assuming the additional payments do affect the price of the imported engines, "the holding of TAA #48 make it clear that subsequent adjustments to prices originally thought to be firm do not alter the transaction value estimated on the actual unit sale prices."

The Chief, Commercial Operations Branch I, New York Seaport, believes that both the reimbursable and non-reimbursable liquidated damage payments are part of dutiable value since the various provisions in the agreement providing for the payment of compensation from the importer to the seller assure the seller's "recovery of the cost of producing the engines plus a profit commensurate with the production run." However, the Chief, Commercial Operations Branch I, indicates that "the price paid or payable is arrived at in terms of the full value of the (multiple-year) contract and is not divisible in terms of invoice unit values."

As you know, the words "price actually paid or payable" in the definition of transaction value are themselves defined in section 402(b)(4)(A) of the TAA as:

> ... the total payment (whether direct or indirect ...) made, or to be made, for imported

543456

F1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

merchandise by the buyer to, or for the benefit of, the seller.

We believe that the following provision of the engine purchase agreement is pertinent to a determination of whether the additional compensation paid as a result of the failure of the importer to purchase the minimum quantity of engines during the 1981 model year is part of the purchase price of the imported engines:

> In the event that (the importer) fails to purchase the minimum number of Engines set forth above, because of the major investment in plant and equipment which (the seller) must make in order to produce the Engines required by this Agreement, the improbability of finding alternative purchasers for the Engines specially manufactured, ... and in light of the uncertainty in determining the profits which (the seller) would have made and the costs and incidental damages which (the seller) would have avoided but for such failure, the parties have considered and agreed that, <u>as an essential condition to (the seller's) willingness to sell Engines at the prices provided for herein, the following payments, representing fair and reasonable compensation for (the seller's) anticipated losses, will be made by (the importer) to (the seller) as liquidated damages</u> and not as penalties with respect to the number of units by which (the importer's) purchases of Engines with respect to any model year are less than the minimum quantities specified above ....

As you point out in your October 3, 1984, memorandum, it is clear from the underscored portion of the above-quoted provision that the invoice unit price for the imported merchandise was established based on the premise that the minimum quantity of engines would be purchased. Of course, if this premise proved to be incorrect, the agreement required the importer to pay the seller certain amounts as liquidated damages in addition to the invoice unit values. Thus, the agreement essentially created a pricing formula pursuant to which a base price (the invoice unit price) for the imported merchandise was established which was subject to an upward adjustment at the end of the model year to the extent that the importer's actual purchases during the year were less than the specified minimum quantity. This construction recognizes that in many business transactions the quantity of merchandise purchased is a significant factor

543456

F2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

in the determination of the unit price for that merchandise.

Consequently, while the additional compensation paid as a result of the importer's failure to purchase the contracted minimum quantity of engines was computed on the basis of a specific amount for each engine below the minimum quantity of engines that was not purchased, we believe, for the reasons explained above, that there is a direct relationship between this additional compensation and the engines that were purchased and imported during the 1981 model year.

We also disagree with the alternative argument advanced by counsel for the importer that the additional compensation must be disregarded since it represents a change in the price which was arrived at after the merchandise was imported. We have consistently held in this regard (see TAA #47 and rulings dated September 13, 1984 (543358), and March 30, 1984 (543252)), that where the buyer and seller agree, prior to exportation of the merchandise, to a fixed formula pursuant to which adjustments, either upward or downward, are to be made to the invoice price, those adjustments will be taken into consideration in determining the price actually paid or payable. The invoice unit price and the adjustments thereto set forth in the purchase agreement in this case clearly were agreed to prior to exportation of the engines to the United States.

We understand that in regard to certain model years subsequent to 1981, the importer purchased in excess of the minimum quantity requirements and, as a result, the seller has repaid most, if not all, of the reimbursable liquidated damages paid by the importer in connection with purchases during the 1981 model year. Generally speaking, in situations in which the price paid or payable is determined by application of a formula which is agreed to by the parties prior to exportation of the merchandise, we believe that, in view of the one-year statutory liquidation period, the final purchase price for the merchandise should be ascertainable within one year of the date of entry. In other words, the one-year statutory liquidation period should not be extended in regard to a particular entry soley to enable an adjustment to be made to the invoice price pursuant to an agreed-upon pricing formula. While the repayments of the reimbursable liquidated damages in this case apparently were made more than one year after the dates of entry of the subject imported engines, it is our opinion that these repayments should be taken into consideration in appraising the engines

543456

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F3

imported during the 1981 model year since liquidation of the affected entries has been suspended pending resolution of this internal advice request.

Based on the foregoing, we conclude that the additional compensation paid by the importer to the seller as a result of the former's failure to purchase the contracted minimum quantity of engines during the 1981 model year is properly part of the price actually paid or payable for the engines purchased and imported into the United States during that model year. This additional compensation, which includes both the 4 percent non-reimbursable amount as well as that portion of the 18 percent reimbursable amount which has not been repaid to the importer as of the date of this decision, should be apportioned equally over the number of engines actually imported during the 1981 model year.

SUBJECT: Internal Advice Request Initiated by World Tile Imports, Inc.

This refers to your memorandum of February 26, 1985, received in this office on March 5, 1986, which forwarded an internal advice request initiated by World Tile Imports, Inc. of Laredo. The issue presented for our consideration concerns the proper appraised value of certain ceramic tiles imported from Mexico.

As we understand the facts involved in this case, Robert K. Woodin ("Mr. W"), a resident of Mexico, is the founder and principal officer and stockholder of World Tile Imports, Inc. ("importer"). Mr. W arranges for the purchase of ceramic tile from unrelated, small-scale producers of tile in Mexico who are largely illiterate and maintain few, if any, records or bank accounts. Mr. W negotiates prices with each tile producer and pays cash for each purchase. Tiles purchased from several producers are consolidated and packed and then transported from Mexico to the importer in Laredo. With respect to each purchase, Mr. W prepares a purchase order reflecting the producer's name and the price for the tile. Mr. W also prepares two types of invoices to the importer for each consolidated shipment forwarded to the United States. One invoice reflects the total price paid to the tile producers and the second reflects "freight" and "handling" costs associated with each shipment. Payment for both types of invoices is made by the importer to Mr. W.

Counsel for the importer maintains that Mr. W is the importer's buying agent and, as a result, transaction value should be derived from the invoice reflecting the amounts actually paid to the tile producers. Counsel states that the amount described in the second invoice as "handling" costs constitutes Mr. W's buying commission and is, therefore, not dutiable as part of transaction value. In support of this contention, counsel has submitted a copy of a written agency

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

FS

agreement between Mr. W "D/B/A Materiales Para La Construcion" and the importer. Mr. W has signed the agreement on behalf of both parties. Although both the invoices and the written agreement indicate that Mr. W is doing business in Mexico as "Materiales Para La Construcion," counsel for the importer asserts that Mr. W is not incorporated in Mexico but, "in compliance with Mexican law, is registered to do business in Mexico as an individual proprietor, not as a corporation."

As an alternative argument, counsel maintains that Mr. W should be considered an employee or officer of the importer and, as a result, amounts paid to him as compensation for his activities on behalf of the importer should not be included as part of the price actually paid or payable for the imported merchandise.

Your memorandum of February 26, 1986, characterizes the importer's internal advice request as "totally frivolous." In your opinion, the importer "is simply a dummy corporation set up by (Mr. W) in order to try to charge off more nondutiable charges." You note that the "so-called buying commission" actually exceeds the value of the tile being imported and that the freight charges also exceed the price for the tile. You state that the evidence shows that the relationship between Mr. W and the importer is that of owner and office staff rather than agent and principal.

The words "price actually paid or payable" in the definition of transaction value, section 402(b) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), are themselves defined in section 402(b)(4)(A) of the TAA as:

> The total payment (whether direct or indirect ...) made, or to be made, for imported merchandise by the buyer to, or for the benefit of, the seller.

We stated in TAA #7 (542141), in regard to the above-quoted provision, that:

> It is clear from the statutory language that in order to establish transaction value one must know the identity of the seller and the amount paid or payable to him. * * * Therefore, an invoice or other documentation from the actual foreign seller to the agent would be required to establish that the agent is not a seller and

543508

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F6

to determine the price actually paid or payable to the seller.

No invoice or other documentation from the purported foreign sellers, the Mexican tile producers, was furnished in this case. The only documentation in our possession reflecting the claimed transaction prices consists of purchase orders from the importer to the tile producers and invoices from Mr. W to the importer, all of which were prepared by Mr. W. Moreover, the proof of payment furnished to Customs consists only of cancelled checks reflecting amounts paid by the importer to Mr. W. In our opinion, this is insufficient evidence upon which to establish that the prices allegedly paid to the tile producers represent transaction value.

543508

The above conclusion raises the question as to whether transaction value may properly be based upon the total invoice price (including the purported buying commission) from Mr. W to the importer. It is important to recognize in this regard that transaction value is derived from "the price actually paid or payable for the merchandise when sold for exportation to the United States" (emphasis added, see section 402(b) of the TAA). Inasmuch as Mr. W is the founder and president of the importing company and apparently owns in excess of 95 percent of the stock of that company, it appears that Mr. W and the importer are actually one and the same legal entity. Therefore, we believe that no sale exists between Mr. W and the importer upon which to base a transaction value.

The foregoing determinations necessarily result in the elimination of transaction value as the basis of appraisement for the imported merchandise. The merchandise, therefore, should be appraised on the basis of the transaction value of identical or similar merchandise under section 402(c) of the TAA. We understand that information relating to the transaction value of identical merchandise is available in this case.

District Director of Customs
Cleveland, Ohio 44114

Re: Applications for Further Review of Protests No. 4101-2-000003 and 4101-2-000007

Dear Sir:

The above-referenced protests concern the proper appraisement, under section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), of two continuous casting machines manufactured by Technica-Cuss GmgH of West Germany and imported by The Shenango Company of Dover, Ohio. Both protests, one of which was filed by the importer and the other by the surety, Washington International Insurance Co., concern the same entry.

Your office appraised the merchandise under transaction value, section 402(b) of the TAA, as represented by the original purchase price to the importer ($410,000). The importer advises that, as a result of late delivery of the merchandise, it sought and received a ten percent ($41,000) decrease in the purchase price. The importer further advises that certain defects in the machines were discovered after their importation. With respect to one defect, relating to a limitation on the diameter of bar that the machines could produce, the importer states that no redress could be obtained from the manufacturer because "they had already allowed the $41,000 credit in the the previous year." For this reason, the importer maintains that the $41,000 reduction in the purchase price should be considered, at least in part, as compensation for the above-described defect.

Moreover, the importer states that it returned to the manufacturer certain defective equipment (nine coolers, miscellaneous parts and four hot change frames having an original quoted value of $41,200) for which a refund was received. Therefore, the importer maintains that the appraised value of the imported merchandise should be reduced by a total of $82,200.

Counsel for the surety contends (as does the importer) that the initial decrease of $41,000 in the purchase price was due, at least in part, from certain defects in the

F8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

imported merchandise. Therefore, counsel requests that we allow an adjustment of $41,000 in the dutiable value of the merchandise. Although a number of other issues are raised in the surety's protest, we note that no information or evidence of any kind has been submitted in support of counsel's claims regarding these issues. As a result, no discussion of these additional issues is deemed warranted.

Section 402(b)(4)(B) of the TAA provides that any rebate of, or other decrease in, the price actually paid or payable that is effected after the date of importation of the merchandise shall be disregarded in determining transaction value. However, the Statement of Administrative Action relating to the TAA provides that "(w)here it is discovered subsequent to importation that the merchandise being appraised is defective, allowances will be made."

Concerning the initial decrease of $41,000 in the purchase price of the machines, it is clear from the evidence that this reduction was sought and received due to the late delivery of the merchandise and not as a result of any defect in the machines. Therefore, we believe that section 402(b)(4)(B) of the TAA precludes consideration of this decrease in the purchase price in determining transaction value. In regard to the defective equipment that was returned to the manufacturer, the evidence indicates that the extent of the refund granted by the manufacturer was $24,960, not $41,200. Consequently, we believe that an allowance should be made for the $24,960 refund in determining the transaction value of the subject merchandise.

Therefore, the protests should be denied in part and granted in part in accordance with this decision. A copy of this decision should be attached to the Form 19, Notice of Action, to be sent to the protestants.

Sincerely,

(Signed) Harvey B. Fox

SUBJECT: Reconsideration of Internal Advice Request 10/84, 543293 CW
Dated January 15, 1985

This is in response to your memorandum which requests reconsideration of Internal Advice request 10/84, dated January 15, 1984. You are requesting our reconsideration of the issue relating to the dutiability of monies paid by the ultimate purchaser to the importer, who transmitted the monies to its parent company in England as contribution for tooling.

It is not necessary to reiterate the facts which relate to this request for reconsideration. For purposes of this ruling, the facts are as described in our prior ruling of January 15, 1985.

You indicate that section 402(h)(1)(A) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA), governs in this situation and that the tooling costs are within the definition of assists. You state that the funds were supplied to the manufacturer to purchase or produce the tooling, and that providing funds to obtain tooling is analogous to providing the tooling itself.

We disagree with the conclusion that such payments to the manufacturer to purchase or produce the tooling constitute an assist within the meaning of section 402(h)(1)(A) of the TAA. In our opinion, there is a significant difference between the payment of monies to the foreign manufacturer to enable the latter to purchase or produce tooling, and actually providing the tooling to the manufacturer. Section 402(h)(1)(A) of the TAA specifies the four categories of items or services which are to be considered dutiable assists "...if supplied directly or indirectly, and free of charge or at reduced cost, by the buyer...". While tooling is specifically included in one of those categories, monies paid to defray the cost of purchasing or producing tooling is not included. Therefore, we believe that such monies do not qualify as a dutiable assist.

You further contend that if the monies paid by the ultimate purchaser to the manufacturer through the importer are not considered as assists, then these payments should constitute part of the price paid or payable for the imported merchandise pursuant to section 402(b)(4)(A) of the TAA. The "price actually paid or payable" includes direct or <u>indirect</u> payments made, or to be made, by the buyer to the seller.

F10

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC

We agree with you that, under the circumstances of Internal Advice Request No. 10/84, such payments constitute part of the price paid or payable for the merchandise. The payments made by the ultimate purchaser, through the importer, to the manufacturer for the tooling are "indirect payments" and are to be included in the price paid or payable.

Therefore, we revoke that portion of our January 15, 1985, ruling which held that the subject tooling payments are not part of the price actually paid or payable for the merchandise. These payments are part of the price actually paid or payable for the imported merchandise and are to be included in dutiable value.

TO : Deputy Assistant Regional Commissioner
(Regulatory Audit), Southeast Region

FROM : Director, Classification and Value Division

SUBJECT: Dutiability of Certain Expenses Incurred During the Assembly Abroad of United States Components

This is in response to your memorandum of June 14, 1985, in which you request advice concerning the dutiability of certain costs incurred in connection with the assembly abroad of United States components entitled, upon their return, to classification under item 807.00, Tariff Schedules of the United States (TSUS). Your request specifically concerns two separate but similar factual situations, each of which relates to an ongoing assemoly operation.

The two factual situations you describe are similar in that both involve a company in the Dominican Republic which assembles United States components provided by a related United States company ("importer"). The assembler in each case does not maintain its own accounting system, expense accounts or general ledger. These functions are handled by the related importer which maintains separate expense accounts for itself and the assembler. The importer in both cases transfers funds to the assembler to reimburse the latter for expenses incurred in the assembly operation.

The imported assembled merchandise involved in the first factual situation (case #1) is being appraised on the basis of computed value, section 402(e) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). For purposes of calculating computed value, the importer in case #1 includes in its cost submission to Customs only expenses which can be directly related to production, such as shop supplies and cost items which meet the statutory definition of assists (e.g., tools). Other more indirect costs, such as office supplies and depreciation expenses, which do not qualify as assists, are not included as part of the computed value cost submission. Profit also is not included.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F12

Moreover, the importer in case #1 excludes from its cost submission certain expenses charged to the assembler's accounts for indirect labor and related labor benefits. These labor costs are attributed to five production managers, four of whom are United States citizens and one of whom is a citizen of the Dominican Republic. Although these employees receive part of their salaries through the assembler's bank account in the Dominican Republic and the remainder through the importer's bank account in the United States, all of the labor costs attributed to these employees are recorded by the importer in the assembler's indirect labor account as an expense of assembly. The portion of the salaries paid through the importer's bank account was not included in the importer's cost submission because, in the importer's opinion, these costs do not meet the definition of an assist, citing as authority TAA #46 dated February 22, 1982.

The imported assembled merchandise involved in the second factual situation (case #2) is being appraised on the basis of transaction value, section 402(b) of the TAA. The importer provides Customs with estimated costs at the time of entry and then submits actual cost information, upon which the appraised value is based, approximately six months later. Unlike case #1, the importer in case #2 generally includes in the actual cost data furnished to Customs general expenses recorded in the subsidiary's expense accounts. However, as in case #1, the importer excludes from its cost submission certain labor costs attributed to three managers working at the assembler's plant. The managers, consisting of a citizen of the Dominican Republic, a citizen of El Salvador and a citizen of Mexico, receive a portion of their salary through the assembler's bank account and the remainder through the importer's bank account, although all of the labor costs are recorded by the importer in the assembler's expense accounts. The actual cost data provided to Customs does not include that portion of the 3 managers' salaries paid through the importer's bank account for the reason that, in the importer's opinion, these labor costs are not dutiable assists pursuant to TAA #46.

You ask the following specific questions in regard to the above-described two factual situations:

1. If a company maintains the accounting records of a related foreign assembler in a separate cost center or division, should expenses recorded in those accounts be the basis of computed value? If not, what basis could be used?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

543576

F13

2. Are general expenses recorded in accounts maintained for the assembler included in foreign operating costs under computed value? Are such expenses included in transaction value when that value is based on the reimbursement of actual costs recorded in the assembler's expense accounts?

3. Are labor costs recorded in accounts maintained for the assembler included in foreign operating costs under computed value? Are such labor costs included in transaction value when that value is based on the reimbursement of actual costs recorded in the assembler's expense accounts?

4. Is the nationality of the employee a factor in determining the dutiability of his salary?

5. Is the method of payment (i.e., through United States banks versus foreign banks) a consideration in determining the dutiability of labor costs.

6. Is the establishment of residence or the length of residence in the foreign country a factor in determining the dutiability of labor costs?

It is your opinion that in a situation in which a foreign assembler's accounting records are maintained by a related United States company in a separate cost center from its own, these accounts constitute the "commercial accounts of the producer" and should be the basis for the calculation of computed value. It is also your view that where general expenses, including indirect labor costs, are recorded in accounts maintained for a foreign assembler by a related importer, those expenses should not be evaluated as assists since they are not recorded in the importer's expense accounts. Rather, you believe that as these expenses are reflected in the assembler's accounting records, they should be dutiable as part of the assembler's general expenses under computed value and as part of the price actually paid or payable when transaction value is based on the reimbursement of the assembler's actual costs of assembly.

As you know, computed value is defined in section 402(e)(1) of the TAA as the sum of:

(A) the cost or value of the materials and the fabrication and other processing of any kind employed in the production of the imported

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

543576

F14

merchandise;

(B) an amount for profit and general expenses equal to that usually reflected in sales of merchandise of the same class or kind as the imported merchandise that are made by the producers in the country of exportation for export to the United States;

(C) any assist, if its value is not included under subparagraph (A) or (B); and

(D) the packing costs.

Moreover, as you point out, the Statement of Administrative Action relating to the TAA states the following in regard to subparagraphs (A) and (B) of the above definition:

> The cost or value of the materials and the fabrication and other processing of any kind employed in the production of the imported merchandise will be determined on the basis of information supplied by, or on behalf of, the producer and will be based upon the commercial accounts of the producer, if such accounts are consistent with the generally accepted accounting principles applied in the country where the goods are produced.
>
> The 'amount for profit and general expenses' will be determined on the basis of information supplied by, or on behalf of, the producer and will be based upon the commercial accounts of the producer, provided that such accounts are consistent with the generally accepted accounting principles applied in the country where the goods are produced and unless the figures provided are inconsistent with those usually reflected in sales of merchandise of the same class or kind as the imported merchandise, that are made by producers in the country of exportation for export to the United States.

We agree with you that where a foreign producer's accounting records are maintained by a related United States company, those records should be considered the "commercial accounts of the producer," as those words are used in the above-quoted provisions of the Statement of Administrative Action. Therefore, those records should be the basis for calculating the "cost or value of the materials and

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

543876

61

fabrication" and "an amount for profit and general expenses" under computed value, provided the producer's accounts are maintained in a separate cost center from the United States company's accounts, and the producer's accounts are consistent with the generally accepted accounting principles applied in the country of production.

If, pursuant to the above conclusion, a foreign assembler's accounting records, as maintained by a related United States company, are used as the basis for calculating computed value, then it necessarily follows that all general expenses recorded in the assembler's general expense accounts are includable in the "amount for profit and general expenses" under section 402(e)(1)(B) of the TAA. We understand in regard to case #1 that there are no other producers of merchandise of the same class or kind in the Dominican Republic. Thus, the assembler's actual general expenses and profit, as reflected in the accounting records maintained for the assembler by the importer, constitute the "amount for profit and general expenses" under computed value.

Similarly, in regard to the second part of your second question, it is our position that where, as in case #2, transaction value is based on the reimbursement by a United States importer to a related foreign producer of actual costs recorded in the producer's accounting records, then all of the general expenses reflected in the records maintained by the importer for the producer are properly included in transaction value.

Concerning your third question, we believe that the conclusions expressed above in response to your second question are equally applicable to indirect labor costs when those costs are recorded in expense accounts maintained for a foreign producer by a related United States importer. In our opinion, this is true even in a situation, such as exists in cases #1 and #2, in which a portion of the salary costs reflected in the producer's accounts are actually paid directly to the involved employees through the importer's bank account. Regarding the importers' contention that the portion of the salaries paid through the importers' bank accounts are not dutiable assists pursuant to TAA #46, it is our view that TAA #46 is distinguishable on its facts from the two cases before us. In TAA #46 various United States resident employees of the importer worked at a related foreign assembly plant but were essentially paid by the importer rather than the assembler. These salary costs were not reflected in the assembler's books of account as an

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

543576

62

expense of doing business but, presumably, were reflected as an expense in the importer's accounts. We held in TAA #46 that as the employees' salaries do not qualify as assists, these costs would not be included in the computed value of the imported merchandise.

However, in the two factual situations before us, the salary costs are reflected as expenses in the accounts maintained for the assembler by the importer, but not in the importer's own expense accounts. Therefore, we believe that the issue of whether that portion of the salary costs paid directly by the importer constitutes a dutiable assist does not arise inasmuch as these expenses are already considered dutiable as part of the "amount for profit and general expenses" under computed value or as part of the "price actually paid or payable for the merchandise" under transaction value. This position is consistent with our holdings in TAA #18 dated February 27, 1981, TAA #23 dated April 3, 1981, and TAA #44 dated July 20, 1982. For example, in TAA #18 we stated the following.

> ...air conditioning equipment, a power transformer, telephone switching equipment and emergency generators (provided without charge by an importer to a related foreign producer) do not fall within the definition of assists, as they are not used in the production of the merchandise. Accordingly, unless they are carried on the books of the foreign producer, their cost or value may not be apportioned to the merchandise, and is not includable in transaction value or computed value. (emphasis added.)

Moreover, in TAA #23 we stated the following concerning the dutiability of certain design expenses incurred by a United States importer:

> Accordingly, we cannot categorically state that design expenses are not dutiable for purposes of computed value. We can state, however, that in those cases where such design costs are not carried on the producer's books as either a cost or value of materials and of fabrication, or as a general expense, and such treatment is in accordance with generally accepted accounting principles, such costs would not be part of computed value.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

543576

63

In answer to your fourth, fifth and sixth questions, it is our opinion that none of the cited factors is a consideration in determining the dutiability of labor costs where, as is the case in the factual situations before us, those costs are recorded as an expense in the foreign producer's commercial accounts.

(Signed) Harvey B. Fox

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

REFER TO

12 MAR 1986

CLA-2 CO:R:CV:V
543659 EG

Mr. Peter Klestadt, Esq.
Grunfeld, Desiderio, Lebowitz
& Silverman
Two World Trade Center, Suite 2238
New York, New York 10048

Dear Mr. Klestadt:

This is in response to your letter of December 11, 1985, requesting a binding ruling concerning the transaction value of certain free quota merchandise under section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). In responding to this request, we are assuming that you no longer are seeking a ruling as to your November 22, 1985, letter.

You indicate that your client (importer) will order merchandise from its main factory in Taiwan at the actual contract price. The factory in Taiwan will ship this merchandise to your client at a "high" price due to free quota considerations in Taiwan. A letter of credit will be opened by the importer to the factory, and the factory will be allowed to draw down at the high price. Soon thereafter, a corporate check will be issued by the factory to the importer in Taiwanese currency in an amount equal to the difference between the high invoice price and the actual contract price. You further indicate that the check is accompanied by an itemization which lists the shipment details.

It is your contention that the appraised value should be that of the actual contract price, rather than the higher invoice price. You have requested a binding ruling to this effect.

The U.S. Customs Service recently published T.D. 86-56 in the Federal Register which prohibits transactions such as those described in your ruling request. As indicated in the cited T.D., "section 484(a), Tariff Act of 1930, as amended (19 U.S.C. 1484(a)), requires that importers file with Customs documentation which, among other things, allows Customs 'to assess properly the duties on the merchandise, [and] collect accurate statistics with respect to the merchandise * * *.'" A false purchase price appearing on an invoice does not satisfy this requirement. Moreover, the invoice fails the requirement imposed by 19 U.S.C. 1481(a)(5), that each invoice is to set forth "the purchase price of each item * * *."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Enclosed please find T.D. 86-56 which clearly encompasses the prospective transactions which you describe. Therefore, your request for a ruling which allows entry of the imported merchandise at the contract price with proof of a rebate by the exporter to the importer is denied.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

DATE: FEB 28 1986

FILE: CLA-2 CO:R:CV:V
543693 EG

TO : District Director of Customs
Savannah, Georgia 31401

FROM : Assistant Commissioner (Commercial Operations)

SUBJECT: Phillips-Van Heusen Corporation - 520 Claim

This is in reference to your note of February 2, 1986, attaching an application for relief filed on behalf of Phillips-Van Heusen Corporation (importer) by Ross & Hardies (attorneys) pursuant to 19 U.S.C. 1520(c)(1) for reliquidation of entry 85-344697-6 of February 4, 1985, liquidated March 1, 1985.

The importer's attorney states that the merchandise in question, i.e., wearing apparel from Korea, was entered at the invoiced values. However, it is claimed that these figures were incorrect and that the merchandise should have been entered at the price on the purchase order. This occurred because neither the importer's customhouse broker nor the import specialist involved were notified of the fact that the invoiced values were not the prices agreed to between the buyer and seller. Actually, the true price was lower than the invoiced price.

The above transaction is part of a high-low arrangement intentionally agreed to by the importer to pay a higher price for merchandise in order to obtain permission to export. In return, the supplier agrees to invoice other merchandise at lower than the actual price.

Based upon these price manipulations, the importer claims that the excess duty paid on the entry in liquidation is refundable pursuant to 19 U.S.C. 1520(c)(1). That section provides authorization to reliquidate an entry to correct "a clerical error, mistake of fact, or other inadvertence not amounting to an error in the construction of a law..." which is brought to the attention of the Customs Service within one year of entry. The importer states that the error in this case is one of "inadvertence."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

67

In Headquarters Ruling 723218 JL, dated May 8, 1984, (copy attached), the same price manipulations occurred between an importer and foreign manufacturers. Invoice prices were considerably higher than actually agreed upon purchase order prices between the parties. The importer paid the invoice prices and the excess payments were to be offset on subsequent shipments by an underpricing of non-quota merchandise. However, entries were made at the invoice prices rather than the lower purchase order prices. The unit prices of the imported textile products were intentionally overstated in order to obtain visas under the quota procedure. In that case, reliquidation pursuant to 19 U.S.C. 1520(c)(1) was denied.

The inadvertence or error which occurred was due to an intentional submission by the importer of an invoice which did not represent the actual price agreed to between the importer and the seller. The submission of the invoice bearing a price which was not the actual price was not a clerical error, mistake of fact, or inadvertence. The characterization of the use of the higher invoice price as an "inadvertence" is incorrect. It is well-established that "negligence, or negligent inaction, by an importer (or his agent) which causes the error sought to be remedied under section 1520(c)(1) will preclude relief being granted." See Ruling 723218 JL.

Your attachment is returned.

APR 1 1986

CLA-2 CO:R:CV:V
543709 EGK

Mr. Frank M. Murphy
Customs Manager
Volkswagen of America, Inc.
888 W. Big Beaver
Post Office Box 3951
Troy, Michigan 48007-3951

Dear Mr. Murphy:

In your letter of February 27, 1986, you request a ruling as to the method of appraisement of merchandise pursuant to the valuation statute, section 402 of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). You further request a ruling as to the proper importer of record pursuant to 19 U.S.C. 1484.

You indicate that Volkswagen of America, Inc. ("U.S. company") has contractually agreed with Volkswagen AG, Wolfsburg, W. Germany ("manufacturer") whereby the U.S. company intends to sell vehicles in the United States to retail customers for delivery in Europe. You call this arrangement the European Tourist Delivery Program (ETDP). In accordance with this program, a retail customer in the United States contracts with an authorized Volkswagen or Audi dealer for delivery of the vehicle in Europe. The purchase price paid by the customer includes costs incurred for the return of the vehicle from designated shipping agents in W. Germany to the U.S. dealer. An additional charge is borne by the U.S. customer if the vehicle is dropped off at a location other than that designated by the program.

You describe the sequence of events in a typical ETDP transaction as follows. An order is placed by the customer with an authorized dealer, which is received within 5 days by the U.S. company. When the order is received, a telex order from the U.S. company to the manufacturer is transmitted. Within approximately a 1-month time frame, the manufacturer confirms the order with both the U.S. company and the customer. An invoice is sent to the customer as well as to the U.S. company. The invoice received by the U.S. company covers all vehicles delivered in a 1-month period under the ETDP.

You further state that ETDP vehicles may only be purchased through the U.S. company through franchised dealers. All imported vehicles are produced pursuant to the request or order of the U.S. company. The obligation for insuring the vehicle during transit from Europe to the U.S. dealer is assumed by the U.S. company.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ____

69

Based upon these facts, it is your contention that the vehicles should be appraised under transaction value pursuant to section 402, Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). Furthermore, you state that "the price actually paid or payable for the imported merchandise when sold for exportation to the United States," is represented by the invoice price between the U.S. company and the manufacturer, rather than the invoice price between the U.S. company and the U.S. retail customer.

We agree with your conclusion regarding which "sale" governs for purposes of valuation of the imported vehicles. As you have indicated, TAA #57 holds the following:

> [I]t is the position of the Customs Service that the transaction to which the phrase 'when sold for exportation to the United States' refers when there are two or more transactions which might give rise to a transaction value, is the transaction which most directly causes the merchandise to be exported to the United States.

In the instant case, the transaction which most directly causes the merchandise to be exported to the United States is the transaction between the U.S. company and the manufacturer. It is this transaction which will govern for purposes of appraisement, assuming that the related party transaction is acceptable within the meaning of section 402(b)(2)(B) of the TAA.

It is our opinion that the U.S. company's interest in the vehicles is not sufficient to qualify it as importer of record. Accordingly, the U.S. company may be designated as consignee on the shipping documents which would entitle it to appoint a licensed customhouse broker to make entry in his own name as importer of record. Otherwise, entry can only be made by the importer or his designated broker pursuant to a properly executed power of attorney.

Sincerely,

(Signed) Harvey B. Fox

[redacted]

Dear [redacted]

This is in response to your letter of May 21, 1984, in which you request a ruling regarding the applicability of the duty-free provisions of the Caribbean Basin Initiative (CBI) to wire produced from wire rod in a CBI beneficiary country.

You advise that your company is considering the feasibility of starting off-shore production of high carbon wire, classifiable under item 609.4315, Tariff Schedules of the United States, for export to the United States. You specifically inquire as to whether the processing of wire rod to wire represents sufficient transformation of a product into a new item of commerce as required under the CBI.

We should state initially that since wire, classifiable under item 609.4315, is not among the articles specifically excluded from CBI treatment, it would be eligible for duty-free entry provided that all requirements under the CBI are met. For your information, we have enclosed a copy of the interim CBI regulations, which are set forth in section 10.191 through 10.198 of the Customs Regulations (19 CFR 10.191 - 10.198).

As you may be aware, an article from a beneficiary country is entitled to duty-free treatment under the CBI provided that (1) the article is imported directly from a beneficiary country into the Customs territory of the United States, (2) the article is the growth, product or manufacture of a beneficiary country, and (3) at least 35 percent of the appraised value of the article is attributable to the sum of the cost or value of the materials produced in one or more beneficiary countries, plus the direct costs of processing operations performed in one or more beneficiary countries. For purposes of determining the 35 percent value-content requirement, an amount not to exceed 15 percent of the appraised value of the article at the time it is entered may be attributed to the cost or value of materials produced in the Customs territory of the United States (other than Puerto Rico).

With respect to the first requirement set forth in the preceding paragraph, we direct your attention to section 10.193 of the interim CBI regulations which defines the words "imported directly." Concerning the second requirement, section 10.195 provides that if an imported article is not wholly the growth, product or manufacture of a beneficiary country, then this

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G11

requirement may be satisfied only if the imported article is a new or different article of commerce which has been grown, produced or manufactured in a beneficiary country. Inasmuch as the wire which you plan to import clearly is a new and different article of commerce when compared to the wire rod from which it is made, the wire would be considered to be a product of the applicable beneficiary country for purposes of this CBI requirement.

In regard to the 35 percent value-content requirement, if the wire rod is not wholly the growth, product, or manufacture of a beneficiary country, then its value may be counted toward this requirement only if the rod is substantially transformed in a beneficiary country into a new and different intermediate article of commerce which is then used in the production of a new or different article which is imported into the Customs territory of the United States (see section 10.196 of the CBI regulations). Since the wire to be produced from the wire rod represents the final article which will be imported rather than an intermediate article which will be used in the production of the final article, the cost of the wire rod is not includable in the 35 percent requirement (assuming the rod is not wholly the growth, product or manufacture of a beneficiary country). Of course, the direct costs of the processing operation performed in the beneficiary country may be counted toward this requirement.

Sincerely,

(Signed) Irving W. Smith, Jr.

SUBJECT: Request for Internal Advice No. 117/84 Concerning the Tariff Classification of a Video Projector

In your memorandum of October 16, 1984 (your reference CLA-2 K:C:DI/III AB K:C:0109), you requested internal advice on the tariff classification of the above-captioned merchandise pursuant to a letter from the importer's counsel dated August 27, 1984. Our decision follows:

ISSUE:

Whether the video projector described below is properly classifiable under the provision for complete television receivers in item 685.11, Tariff Schedules of the United States (TSUS) (1984), the provision for other television apparatus and parts thereof, other, in item 685.22, TSUS (1984), or the provision for electrical articles and electrical parts of articles, not specially provided for, other, in item 688.43, TSUS (1984).

FACTS:

The merchandise in issue is a video projector which is used in conjunction with a video tape player and a viewing screen to show movies or other programs recorded on video tape. Incorporated in the video projector are an electronic chassis, three cathode-ray tubes, three lenses, three

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A3

deflection yokes, three lead glass discs, quadruplers, splitters, and extra high tension cables used to connect the components.

To show a picture, the video projector is connected to the tape player. The tape player then plays a video cassette, converting the video information recorded on the magnetic tape into an electrical signal that is sent through cables to the projector. The projector processes that signal into the final perceptible signal, the video image, which is projected onto the viewing screen.

Technical literature submitted by the importer indicates that the video projector is capable of accepting composite video input signals at a level of 1 volt peak to peak at 75 ohms unbalanced, as well as RGB input signals with a signal level of 0.7 volts peak to peak at 75 ohms unbalanced. The circuitry which processes those signals inside the projector consists of the same type of circuitry used for processing similar signals in color television receivers.

553373

LAW AND ANALYSIS:

The importer contends that the subject video projector cannot be classified under the tariff provision for complete television receivers in item 685.11, TSUS (1984), because it has no tuner and, therefore, no selectivity capability.

We have previously noted that a television receiver is a particular type of radio receiver. See Customs Rulings CLA-2 CO:R:CV:V 553048 MP (Aug. 21, 1984) and CLA-2 CO:R:CV:V 553020 MS (Nov. 15, 1984). In support of this finding, the importer has provided us with a technical definition of a television receiver which describes that device as "a radio receiver for converting incoming electrical signals into television pictures and the associated sound." Letter from Importer's Counsel dated August 27, 1984, at 4 (quoting R. F. Graf, Modern Dictionary of Electronics 734 (1977)).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

For tariff purposes, a radio receiver has been lexicographically and judicially defined as capable of performing three basic functions: selectivity, amplification, and detection. B & E Sales Co., Inc. v. United States, 9 CIT ___, Slip Op. 85-22 (Feb. 28, 1985). In NEC America, Inc. v. United States, 8 CIT ___, Slip Op. 84-106 (Sept. 25, 1984), the court defined selectivity as "the ability to select a particular frequency from the many radio signals in the atmosphere." This definition is unfit for the tariff provision covering complete television receivers, though, because unlike the radio apparatus provisions, which only cover articles used for the transmission or reception of signals by means of electromagnetic waves transmitted without any line connection, the television apparatus provisions cover the described merchandise regardless of whether the transmission is by electromagnetic waves or by line. Tariff Classification Study of November 15, 1960, schedule 6 at 305.

A definition of selectivity which is more suited to all types of radio receivers, including television receivers, is found in the McGraw-Hill Encyclopedia of Electronics and Computers (S. Parker ed. 1984), which defines the term as "[t]he ability of a radio receiver to separate a desired signal frequency from other signal frequencies, some of which may differ only slightly from the desired value." Id. at 726. By this definition, it is clear that the video projector does not perform a selectivity function. To begin with, the signals which the video projector can accept are not described in terms of frequency, but in terms of signal level. Furthermore, although it can accept certain types of electrical signals and reproduce pictures therefrom, the projector does not and cannot differentiate those signals from other simultaneously transmitted signals. The video projector

553373

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

AS

is therefore distinguishable from the single channel paging receivers in NEC America because not only was the signal received by the pagers measured in terms of frequency, but the pagers also had the ability to ferret out that signal from the many radio signals in the atmosphere. Accordingly, the video projector is not classifiable under the provision for complete television receivers in item 685.11, TSUS (1984).

The importer claims that the video projector is properly classifiable under the provision for other electrical articles and electrical parts of articles, not specially provided for, in item 688.43, TSUS (1984), or, alternatively, under the provision for other television apparatus and parts thereof, other, in item 685.22, TSUS (1984). For the following reasons, we agree with the importer's alternatively proposed classification.

Inasmuch as item 685.22 is a more specific tariff provision than item 688.43, it must be shown that the video projector does not fall within the scope of item 685.22 before classification under item 688.43 may be considered. In this regard, the importer maintains that the video projector cannot be classified as television apparatus because such apparatus is provided for in superior headings to item 685.22 as television transmission and reception apparatus, and the video projector is incapable of directly receiving or transmitting signals having frequencies in the range at which commercial television signals are broadcast (i.e., 54 to 890 MHz). However, this argument fails because even though the video projector cannot select a signal having a frequency between 54 to 890 MHz, it nevertheless reproduces visual images by performing the other two functions of a television receiver, viz., amplifying and detecting a baseband video signal. Therefore, although

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

553373

A6

the video projector is not a television receiver, it does constitute television reception apparatus. Consequently, in the absence of an even more specific provision therefor, the video projector is classifiable under item 685.22, TSUS (1984).

HOLDING:

The subject video projector is classifiable under the provision for other television apparatus and parts thereof, other, in item 685.22, TSUS (1984), with a column 1 duty rate of 4.2 percent ad valorem. Rulings not in accordance with the principles expressed herein are hereby modified.

Mr. Dean Walcutt
President
Certified Oil Company
303 South Front Street
Columbus, Ohio 43215

Dear Mr. Walcutt:

Thank you for your letter of May 8, 1985, regarding the free entry of ethanol under the Caribbean Basin Initiative.

In 1984 we issued a ruling that if azeotropic distillation is performed in a beneficiary country to change beverage grade ethanol into fuel grade this would amount to a substantial transformation permitting duty-free entry upon compliance with the Customs Regulations.

However, domestic interested parties have challenged this position and a notice has been published in the Federal Register inviting written submissions on the question. The comments and views received will be analyzed and evaluated before a decision is made on the petition.

If our 1984 ruling is upheld, the tariff treatment thereunder will of course be extended equally to all importers of fuel grade ethanol. You will note from the enclosures that legislation has been introduced in the Congress which may affect the importation of this commodity.

Sincerely,

Russell Arnold

MAR 31 1986

CLA-2 CO:R:CV:V
553656 EM
813165 NY

Peter J. Baskin, Esq.
Sharretts, Paley, Carter &
Blauvelt, P.C.
80 Broad Street
New York, New York 10004

Dear Mr. Baskin:

In your letter of April 3, 1985, on behalf of A & A International, addressed to the New York Customs office and forwarded to us for reply, you asked about the tariff status of certain low-power FM transceivers with headsets (Catalog No. 21-400), the product of Korea.

The merchandise is described in the brochure submitted as a voice-operated, two-way combination FM transceiver, TRC 500 model with headsets, each requiring a 9V battery, and operating on a transmission frequency of 49.830 mHz, not requiring an FCC operating license. The merchandise is also described as a one channel, hands-free, voice-actuated headset walkie-talkie radio with a limited transmission range extending up to a line-of-sight 1/2 mile, and not capable of simultaneous transmitting and receiving. The two-way communication system may be used for recreational activity, such as bicycle outings, and more practical uses such as warehouse inventory, in a hospital, or construction sites, etc.

Such transceivers are aptly defined in the headnote provisions of the Tariff Schedules of the United States (TSUS), as a combination of radio transmitting and receiving equipment in a common housing, employing common circuit components of both transmitting and receiving, and which are not capable of simultaneously receiving and transmitting.

With respect to classification, Presidential Proclamation No. 4561 dated April 7, 1978, 43 F.R. 15127, which became effective on entries made after April 11, 1978, deleted item 685.28, TSUS, and specifically added in item 685.29, TSUS, to include all other hand-held transceivers, and item 685.27, TSUS, included citizen band, except hand-held, transceivers. The purpose was to raise duty rates on imported citizen band transceivers. The classification of low powered transceivers operating on frequencies 49.82 to 49.90 mHz under item 685.26, TSUS, remained unchanged. In 1985, items 685.26 and 685.29, TSUS, were deleted as such and items 685.22 and 685.24, TSUS, respectively, were added in lieu thereof and included the same tariff descriptions.

As a result, low-power radiotelephonic transceivers operating on a frequency range from 49.82 to 49.90 mHz are provided for under item 685.22, TSUS, while all other hand-held transceivers are classifiable under item 685.24, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

A9

The term "toylike," with reference to walkie-talkies not requiring a license under item 685.26, TSUS, was first introduced in CIE 5/78 dated September 22, 1978, which provided new statistical breakouts for transceivers (items 685.2600 through 685.2975) pursuant to the cited Presidential Proclamation. However, the term "toylike" as used in the CIE remains vague and indefinite and was not otherwise defined except perhaps that it may have reference to quality of construction of the transceivers. To consider "toylike" as a means for limiting or enlarging a tariff provision when none exists is contrary to proper statutory construction.

On the basis, therefore, that an imported article is classifiable in that tariff provision which most specifically describes it, we believe that the described low-power transceivers, presumably meeting FCC low power standards, are classifiable under the provision therefor in item 685.22, TSUS, since the operating frequency range stated therein of 49.82 to 49.90 mHz is the only expressed limitation of the provision.

Sincerely,

(Signed) RUSSELL J. ARNOLD

District Director of Customs
U.S. Customs Service
477 Michigan Avenue
Detroit, Michigan 48226-2528

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 3801-4-000686 dated April 19, 1984. The protest was filed against the decision in the liquidation of Entry No. 84-708322 of November 23, 1983. The entry was liquidated on January 27, 1984.

ISSUE:

The question raised in the protest concerns the applicability of item 801.00, Tariff Schedules of the United States (TSUS), and requirements thereunder, to a steel mold #DD6 exported under an agreement to a Canadian firm by a U.S. company for the production of plastic planters.

FACTS:

One 4-cavity steel mold, valued at $10,500, was previously imported from Portugal by Max Klein Company of Wisconsin. A Canadian Customs form shows that the mold was imported into Canada on August 28, 1983, by Bow Plastics Ltd. In an "exclusive right and license" agreement dated November 24, 1982, and signed by both parties, it was stated that the Bow Plastics Company was responsible for the transportation of the molds back and forth and duties as well as for the care of and any damage done to the mold, and the Bow Company agreed to pay "MK" royalties equal to a percentage of the sales of the plastic planters made from the mold during a certain accounting period of time. The Max Klein Company stated in a letter dated June 7, 1983, that the described DD6 mold was being leased to Bow Plastics and the lease agreement would be considered valid until revoked by either party.

A11

The Bow Company notified the Customs broker (W. R. Filbin Co.) by letter dated May 18, 1984, that the lease had been accepted on the basis of the consideration of the payment of royalties to Max Klein on the Canadian sale of planters produced from the mold in Canada.

Entry records submitted show that the mold was previously imported into the United States by a Customs broker (W. R. Filbin) for the account of Bow Plastics on Entry No. 83-719159-3 dated July 11, 1983, and duty paid. The Canadian Customs forms show the Max Klein Company to be the owner, vendor and shipper. The mold was presumably later returned to Bow Plastics in Canada by the owner for a second production run and again re-imported by the broker Filbin for the account of Bow Plastics on Entry No. 84-708322 dated November 23, 1983. This entry raised the question of the applicability of item 801.00, TSUS, and gave rise to the protest.

LAW AND ANALYSIS:

Briefly, item 801.00, TSUS, requires the merchandise to be re-imported by or for the account of the person who imported it into, and exported it from the United States, and also the merchandise must have been exported under a lease or similar use agreement. See Sec. 118 of P. L. 98-573.

With respect to the transaction, both agreements, that of November 24, 1982, showing an "exclusive right and license" to use the mold in producing planters, signed by both parties, and the agreement of June 7, 1983, stating that the mold was leased to Bow Plastics Company in Canada, when taken together would give credence and support to the existence of a lease or similar use agreement between the parties. It was intended that the transaction be considered a lease and was specifically

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

553676

A12

stated as such in the letter of June 7th. The "exclusive right and license" was the license to use the mold and the fact that consideration therefor was stated in terms of "royalties" rather than a fixed sum appears inconsequential when viewing the transaction as an entirety.

Further, the term "importer" means the person primarily liable for the payment of any duties on the merchandise, or an authorized agent acting on his behalf. The mold was imported into the United States on both occasions from Canada by the Customs agent acting on behalf of his principal, Bow Plastics, who in turn was responsible for the transportation of the molds, back and forth, and given the license to make and sell planters produced from the mold and to pay the duty. Since the Klein Company was the owner of the mold, Bow Plastics was given authority to act on behalf of the Klein Company for shipment of the molds back and forth and to pay the duty thereon. Notwithstanding whose name appears on the entry documents, the submitted documents show a principal-agent relationship between the Max klein and Bow Plastics companies. In those circumstances, the same person was involved with the agreement of the other.

Since the mold was a product of Portugal and imported prior to the dates shown herein, presumably the mold was originally entered duty free under the GSP program. On this basis, the mold was subject to the payment of duty upon its first entry from Canada and met all the requirements of the tariff provision thereafter.

CONCLUSION:

In view of the foregoing, we find that the provisions of item 801.00, TSUS, are available to the importer of the mold in the given

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

553676

A13

circumstances. Accordingly, you should grant the protest for the relief requested under item 801.00, TSUS. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

(Signed) RUSSELL A. ARNOLD

CLA-2 CO:R:CV:V
553825 KP

Mr. Don Hughes
Imperial Processing Corporation
Post Office Box 479
Kenbridge, Virginia 23944

Dear Mr. Hughes:

This is with reference to your letter dated August 19, 1985, wherein you requested a ruling regarding the eligibility of cigar scrap tobacco from the Dominican Republic for duty-free entry into the United States pursuant to the Caribbean Basin Initiative (CBI).

The cigar scrap tobacco will be produced from cigar leaf tobaccos, some of which are grown in CBI countries and others of which are produced in Europe or the Far East. The manufacturing process for the cigar scrap tobacco will be virtually identical to the procedure set forth in Customs Ruling CLA-2 CO:R:CV:V 553120 KP (Sept. 28, 1984), copy enclosed, with the following exceptions:

1. After the leaf blending step (step 2 in Customs Ruling 553120), the process would continue with the leaf cutting step (step 4 in Customs Ruling 553120).

2. In the leaf cutting step, the leaves would be cut into strips varying from three to six inches in length.

3. After the leaf cutting step, an additional step would be inserted whereby the leaf strips would be sent over searching belts where pickers would remove all foreign matter and objectionable leaves.

4. After the tobacco conditioning step (step 6 in Customs Ruling 553120), the tobacco would be placed in the sweat boxes (step 3 in Customs Ruling 553120), after which the process would be completed as per Customs Ruling 553120 (steps 7 through 11).

In view of the extensive similarity between your proposed operation and the one considered in Customs Ruling 553120, we find that the cigar scrap tobacco emerging from your Dominican processing facility would be a product of the Dominican Republic for purposes of the CBI country of origin requirement.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B1

You said in your letter that the operating expenses and direct costs of processing the cigar scrap tobacco will, in all cases, exceed the CBI 35 percent "added value" requirement. In this regard, please note that the CBI 35 percent requirement is not a value added criterion; rather, it represents a certain proportion of the appraised value of the CBI article at the time of its entry into the United States which must be attributable to either materials incorporated into the article which were produced in CBI beneficiary countries, the direct costs of processing operations which were performed in CBI beneficiary countries, or both. To the extent that the operating expenses to which you referred do not consist of such material or processing costs, they are not includable towards satisfaction of the CBI 35 percent requirement.

You also stated that the cigar scrap tobacco produced in the Dominican Republic will be imported into Puerto Rico and various ports of the United States. The CBI requires that these importations be made directly from a CBI beneficiary country. If such direct importations are made and the cigar scrap tobacco can be shown to meet the CBI 35 percent value-content requirement, your products will be eligible for duty-free entry into the United States upon compliance with the Customs Regulations.

Sincerely,

(Signed) RUSSELL ARNOLD

26 FEB 1986

CLA-2 CO:R:CV:V
553831 MR

Area Director of Customs
J. F. K. Airport
Seaboard World Airlines, Bldg. 178
Jamaica, New York 11430

Dear Sir:

This is in response to your decision on Application for Further Review of Protest No. 1001-5-002543, dated February 27, 1985, contesting your classification of certain telephone mouthpieces from Taiwan. The entry, No. 84-864742-1, was liquidated on November 30, 1984.

FACTS:

The imported merchandise, identified as a "Phone-Guard," is a cone-shaped article, approximately one and one-quarter inches high, with a diameter of approximately two and three-eighth inches at its base and roughly one and thirteen-sixteenth inches along its top surface. The assembly consists of a telephone transmitter and a printed circuit board to which serveral wires, connectors, a battery, and various electronic components are connected, all housed in a transparent plastic case. There is a circular pattern of tiny holes in the top of the subject device, and a larger hole in the side out of which an adjustment knob protrudes. The base is hollowed out and the inner rim is threaded so that it may be screwed into the handset of a standard two-piece telephone in place of the phone's mouthpiece.

When attached to a telephone, the Phone-Guard alerts the user when another person is listening to the user's conversation, whether by means of another extension or an external electronic "bugging" device. The user is alerted by an illuminated red light-emitting diode which is visible

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B3

through the top. The illumination occurs upon an intrusion on the phone line during a conversation by the user, and stops when the instrusion ceases. The Phone-Guard does not have any effect on normal telephone operation and otherwise operates as a telephone mouthpiece.

The article was classified and the entry was liquidated under the provision for telephonic apparatus and instruments and parts thereof in item 684.62, Tariff Schedules of the United States (TSUS) (1984), (now item 684.58). The importer/protestant maintains that the proper classification is under the provision for other visual signalling apparatus, which are electrical, in item 685.75, TSUS (1984) (now item 685.70).

553831

ISSUE:

Whether the Phone-Guard is properly classifiable as telephonic apparatus and instruments and parts thereof in item 684.62, TSUS (1984), or more specifically provided for in item 685.75, TSUS (1984), as other visual signalling apparatus, which are electrical.

LAW AND ANALYSIS:

The subject article is a telephone mouthpiece which has a light which notifies the telephone user of an eavesdropper or eavesdropping device on his telephone line. The signalling function does not exist in and of itself; the diode's illumination occurs only within the parameters of telephone usage. Moreover, the subject article contains a telephone transmitter, necessary to the normal functioning of a telephone, and is used chiefly, if not solely, with telephones. When used, it is an operating component of the telephone.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B4

Accordingly, the device is more than a visual signalling apparatus. It is more specifically described and provided for under the tariff provision for telephone sets and other terminal equipment and parts thereof.

HOLDING:

The Phone-Guard is properly classifiable under the tariff provision for telephone sets and other terminal equipment and parts thereof, in item 684.62, TSUS (1984) (now 684.58).

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to satisfy the notice requirements of section 174.30(a), Customs Regulations, as amended by T.D. 80-271.

Sincerely,

(Signed) RUSSELL ARNOLD

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

553831

B5

5 MAR 1986

CLA-2 CO:R:CV:V
553850 HS
815044 NY

James A. Resti, Esq.
Mandell, Resti, Pollack and Borakove
Two World Trade Center
Suite 2238
New York, New York 10048-0654

Dear Mr. Resti:

In your letter of August 7, 1985, addressed to the New York region and your letter of November 14, 1985, addressed to Headquarters, you request a ruling regarding the eligibility for duty-free treatment under GSP for paint brushes made of components from the People's Republic of China (PRC) and elsewhere that are assembled in Panama.

Bristles from the PRC will be inserted into PRC - produced tin ferrules by the application of epoxy resin in China and then shipped to Panama. In Panama, the bristles will be combed and cleaned. Loose hairs will be removed and the bristle ends will be trimmed into a chisel shape or evenly, based upon the design specifications and final use of the brush. The appropriate information will be metal stamped into the ferrule, the ferrule will be polished and inspected for adherence to specifications.

Handles that will either be manufactured in the U.S. from raw material from the PRC, the U.S., or a Central American country other than Panama will be shipped to Panama in cut-to-shape condition. In Panama, the handles will be cleaned and polished, have all identifying information die-stamped on the lower part, and trimmed as necessary for insertion into the ferrule. The handle will then be inserted into the ferrule and machine nailed to complete the finished brush. The brushes will then be inspected, and then individually packed into poly bags and boxed for shipment to the United States.

To be considered a product of Panama and eligible for duty-free treatment under GSP, the handles and paint brush heads must undergo substantial processing in Panama and emerge as new and different articles of commerce with new names, characters or uses.

It is our view that the operations that occur in Panama involve a simple assembly operation (insertion of the handle into the ferrule), various finishing operations (combing, cleaning, trimming, polishing, die-stamping) as well as inspection and packaging. While each of these types of operations would not individually qualify as a substantial processing operation the combination of these operations may qualify as substantial processing. However, we do not have to reach a conclusion on this issue, as it is also our view, that the paint brushes are not new and

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B6

different articles than the ferrules within which the bristles have been cemented. In our view, the articles imported into Panama are essentially unfinished paint brushes. The essential character of the paint brushes is established once the bristles are blended, cut, flagged and cemented into the ferrules. The addition of the handles does not substantially change the fact that the brush heads are dedicated for use as paint brushes.

Accordingly, we conclude that the finished paint brushes do not qualify for duty-free treatment under GSP.

Sincerely,

(Signed) Harvey B. Fox

B7

(T.D. 86-7)

This notice limits the decision in Appeal No. 85-670, decided June 14, 1985, holding that certain sewing machine needles may be entered free of duty under the Generalized System of Preferences.

DEPARTMENT OF THE TREASURY,
OFFICE OF THE COMMISSIONER OF CUSTOMS
WASHINGTON, D.C.,

In The Torrington Co. v. United States, ___ CAFC ___, No. 85-670 (Fed. Cir. June 14, 1985), the Court of Appeals for the Federal Circuit affirmed a Court of International Trade decision holding that certain industrial sewing machine needles made in Portugal are entitled to duty-free entry under the Generalized System of Preferences. The court held that the raw material imported into Portugal, wire, was substantially transformed into new and different articles of commerce, swaged needle blanks, and that the swaged needle blanks were then substantially transformed into other new and different articles of commerce, sewing machine needles. As a result, the value of the swaged needle blanks was includable in the value of the materials produced in the beneficiary developing country (Portugal) for purposes of section 503(a)(2) of the Trade Act of 1974, 19 U.S.C. 2463(a)(2). Since the sum of the value of the materials produced in Portugal plus the direct costs of processing operations performed in Portugal therefore amounted to more than 35 percent of the appraised value of the imported sewing machine needles, duty-free treatment was applied.

553889

B8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The United States Customs Service disagrees with the court's determination that the process whereby sewing machine needles were produced from the swaged needle blanks constituted a substantial transformation into new and different articles of commerce. The parties to the case stipulated that in the form of swaged needle blanks, the articles were already dedicated for use solely as sewing machine needles with a predetermined blade diameter, and that in the majority of cases, a particular type of swaged needle blank became only a single particular type of needle. Slip op. at 16. Thus, the articles already possessed their inherent character and use as swaged needle blanks; they did not acquire those qualities as a result of the simple refinements made to them once they were in blank form. Therefore, no substantial transformation occurred, so the value of the swaged needle blanks should not have been includable in the value of the materials produced in Portugal for purposes of meeting the 35 percent value-content requirement of the Generalized System of Preferences.

Accordingly, the Torrington decision shall be applied only in those instances in which the factual situation conforms to the one on which the decision is based.

Commissioner of Customs

FEB 11 1986

CLA-2 CO:R:CV:V
553893 EM

District Director of Customs
U.S. Customs Service
Patrick V. McNamara Bldg.
477 Michigan Avenue
Detroit, Michigan 48226-2528

Dear Sir:

This ruling is in response to the Application for Further Review of Protest No. 3802-4-000035 dated February 16, 1984. The protest was filed against the decision in the liquidation of Entry Nos. 83-123362 & 63 of February 23, 1983 and 83-123915 of March 16, 1983, at Port Huron. The entries were liquidated on November 18, 1983.

ISSUE:

The questions raised concern the tariff classification as well as the eligibility of certain process control systems under item 807.00, Tariff Schedules of the United States (TSUS).

FACTS:

The imported merchandise is described as Sentry Process Control Systems and related component equipment for the pulp and paper industry and for controlling coating weight measurement for the metals industry. The Sentry 300 SG System is described as a process control for the pulp and paper industry and consists of a precision scanner/sensor, sensor and process control modules, and a computer operator station and printer. The Sentry 8500 Battery Paste Measurement and Control system consists of a gammagauge sensor/scanner, paste weight digital meter, an operator's station, and a systems printer.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B10

With respect to documentation accompanying the entries, it is stated that the importer (Sentrol Systems Ltd., Downsview, Ont., Canada) generally enters merchandise on invoices using estimated costs. A written request was made for corrected commercial invoices, showing corrected engineering costs for each entry as well as a sales contract or purchase order and proof of payment, in order to establish the true value of the imported merchandise.

Instead of submitting corrected invoices, revised pro forma invoices were submitted with the protest, showing a cost that was $20,203 lower for the Sentry 300 SG system than that shown originally and $30,542 lower than that shown upon entry of the MDSA 8500 battery system. Other articles, such as a BG source and detector head and a process interface module, listed at $5,819, and $15,738, respectively, were on revised invoices but omitted on the original invoices. Other articles such as a system cable were listed on the original but omitted on a revised invoice. All are listed in Canadian currency and a process control station was listed at $42,585 on a revised invoice but omitted entirely on the original invoice.

Further, assembler's declarations submitted in support of item 807.00 allowances were incomplete in failing to show the port from which the materials claimed to be of United States origin were exported and the date of exportation.

The importer claims that the process control stations should be classified under the provision for parts of machines for making paper and paper-making machinery in item 668.06, TSUS, while the district director's position is that the articles should be classified as parts for electrical

553893

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B11

measuring, checking, analyzing, or automatically controlling instruments and apparatus in item 712.49, TSUS, and that allowances under item 807.00, TSUS, should be denied on the basis of incomplete documentation.

LAW AND ANALYSIS:

The protestant claims that the costs for the process control stations and detector heads were included in the original estimated invoices but were shown as break-out or separated items on corrected invoices for all three entries and, therefore, the process control stations and detector heads should be classifiable under items 668.06 and 709.66, TSUS, respectively, on the basis of a previous ruling letter dated May 15, 1981, 055820. This ruling concerned the classification of a process control station primarily used for the control of papermaking under item 668.06, TSUS, but whose sensory function depended upon the use of radioactive emissions.

With respect to the classification of the listed parts making up the Sentry 300 SG Control system, the precision sensor/scanner and sensor control modules are primarily used as parts of electrical measuring instruments and as such are separately classifiable under the provision therefor in item 712.49, TSUS, whether or not imported with the remaining parts of the system. With respect to the classification of the remaining parts of the 300 SG system, the component process control module is a general process interface module that can be programmed for any specific application and is appropriately classifiable under the provision for electrical articles, not specially provided for, in item 688.43, TSUS. The component computer control station is classifiable as a control panel under item 685.90, TSUS, and the printer, assuming it to be of the free

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

553893

B12

standing line type for making hard copies, is classifiable under the provision for office machines, not specially provided for, in item 676.30, TSUS. See letter dated July 10, 1984, 071481.

On the other hand, the gammagauge sensor/scanner component of the Sentry 8500 Battery Paste Measurement and Control System depends on gamma radiation particles to produce a current digital signal which is displayed on a paste weight meter and relayed to the operator's station. Operation of the sensor detector heads depends on a microprocessor which uses gamma transmission to measure accurately paste weight after separating out other variables. This is the basis for automatic control of the paste application. From this view, the gammagauge sensor/scanner is classifiable under the provision for apparatus based on the use of radiations from radioactive substances, and parts thereof, in item 709.66, TSUS.

The computer operator's station is classifiable as a control panel under item 685.90, TSUS, and the printer, if of the free standing line type, is classifiable under the provision for office machines, not specially provided for, in item 676.30, TSUS. If the printer is a teleprinter or teletypewriting machine, it is classifiable under the provision therefor in item 684.65, TSUS. However, in either case, if the printer is a product of United States origin and has not been advanced in value or improved in condition by any means while abroad, it may be entered free of duty as American goods returned under item 800.00, TSUS, upon compliance with the regulations.

With respect to the failure to submit complete proper documentation in support of item 807.00 claims and the invoice values raised in the protest, an importer may take advantage of the late filing of supporting

553893

B13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

documents under Sec. 10.112 of the regulations only when the failure to file in a timely manner was not due to willful negligence or fraudulent intent. Upon a request for additional documentation through the medium of a notice of action covering contemplated appraisement and disallowances of item 807.00 claims, the importer submitted revised invoices with the protest, showing lower values for the imported merchandise and lower engineering charges, with no substantiating documents. Here, the failure to list the port and date of export from the United States on the Assembler's Declaration, data that is necessary to show the United States origin of the goods for which allowances are claimed under item 807.00, TSUS, in compliance with the regulations, as well as the revised invoices submitted with the protest that show a break-out of components subject to lower rates of duty and lower engineering costs, all appear to be self-serving submissions tendered without proper support. There were no reasons offered to explain the discrepancies or the resulting confusion of lower revised values and omissions. Corrected commercial invoices were called for but not submitted. In these circumstances, the importer may not take advantage of the late-filing privileges of the regulations.

CONCLUSION:

On the basis of the above, appraisement of the entered merchandise should be at the higher submitted invoice values and engineering costs and at rates of duty in accordance with the foregoing classifications and you should deny the protest for item 807.00 tariff relief on the ground of

553893

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B14

insubstantial compliance with the regulations and the importer's failure to submit adequate satisfactory documentation. A copy of this decision should be attached to your Form 19 Notice of Action to be sent the protestant.

Sincerely,

(Signed) RUSSELL ARNOLD

cl

27 MAR 1986

CLA-2 CO:R:CV:V
553903 MR

District Director of Customs
San Francisco, California 94126

Dear Sir:

This is our decision on Application for Further Review of Protest No. 2809-5-000817, dated June 3, 1985. The protest concerns entry 84-224594-2, dated December 16, 1983, and liquidated April 26, 1985. The merchandise involved is Commodore color television monitors from Japan.

FACTS:

The color monitor, designated by the importer/protestant as the C1702, provides color video capabilities to a Commodore computer. Measured diagonally, the monitor's "picture" screen is 13 inches. It has a built-in audio amplifier and speaker, and allows control of color, tint, brightness, contrast, vertical hold, and horizontal hold, as well as volume. It can accept composite video and audio input signals from video cassette recorders which have an output level of 1 volt peak to peak, at 75 ohms.

The entry for the monitor was liquidated under the provision for complete television receivers, in item 685.11, Tariff Schedules of the United States (TSUS), (1984, now 684.92). The importer/protestant maintains that the proper classification of the article is under the provision for other television apparatus and parts thereof, other, in item 685.22, TSUS (1984, now 685.08). In the alternative, he asserts that the proper classification would be in item 676.30, TSUS, as office machines, not specially provided for.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C2

ISSUE:

Whether the subject color monitors are complete television receivers, or are properly classifiable as either other television apparatus and parts thereof, or office machines not specially provided for.

LAW AND ANALYSIS:

We have consistently determined that a television receiver is a particular type of radio receiver. See Customs Rulings 553048 (Aug. 21, 1984); 553020 (Nov. 15, 1984). Moreover, we have held that, for an article to be a complete television receiver for tariff purposes, it is not enough that it has the capability to detect and amplify a baseband video signal input from another source such as a video cassette recorder. In our ruling 553373 (Feb. 7, 1986), which concerned a video projector device with essentially the same input compatibility, it was held that the absence of a selectivity function (i.e., the ability to separate a desired signal frequency from other signal frequencies as in the reception of television signals), precluded classification under the provision for complete television receivers in item 685.11, TSUS (1984; now 684.92).

While the subject color monitor does accept certain types of electrical signals and reproduce pictures therefrom, such as a baseband signal from a video cassette recorder, it does not have the capability to accept and ferret out any particular signal or signals from the many radio signals in the atmosphere. Accordingly, it is not classifiable under the provision for complete television receivers in item 685.11, TSUS (1984; now 684.92).

553903

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C3

The importer asserts that the monitor is properly classifiable under the provision for other television apparatus and parts thereof, other, in item 685.22, TSUS (1984, now 685.08), or, alternatively, under the provision for office machines not specially provided for, in item 676.30, TSUS. Inasmuch as the former provision is more specific than the latter, it must be shown that the monitor does not fall within the scope of television apparatus before classification under item 676.30, TSUS, can be considered.

Although the monitor is not a complete television receiver because of its inability to select and separate signal frequencies, it can reproduce visual images by accepting certain types of video signals with a signal level of 1 volt peak to peak, which is standard television transmission. It is, therefore, television reception apparatus. See Customs Ruling 071263 (October 9, 1985).

HOLDING:

The Commodore color monitor, C1702, is classifiable as other television apparatus and parts thereof, other, in item 685.22, TSUS (1984, now 685.08). The protest should be allowed. A copy of this decision should be attached to the Form 19 Notice of Action to satisfy the notice requirement of section 174.30(a), Customs Regulations, as amended by T.D. 80-271.

Sincerely,

(Signed) RUSSELL ARNOLD

CORRESPONDENCE APPROVAL AND CLEARANCE Form

553903

MAR 12 198

CLA-2 CO:R:CV:V
553930 MR
813692 NY

Mr. Dave Corry
Director of Logistics
ISOETEC
6 Thorndal Circle
Darien, Connecticut 06820

Dear Mr. Corry:

This is in reply to your letter, dated May 3, 1985, to the Regional Commissioner of Customs, New York, in which you requested a ruling concerning the tariff classification of key telephone stations from Korea.

The key telephone station is a device which is used to make and receive telephone calls. It functions in the same manner as a standard telephone instrument. When connected with a key system unit, or other certain telephone switching apparatus, access can be provided to multiple lines and other capabilities can be made available.

You state that the key telephone station you import should be classified under item 684.57, Tariff Schedules of the United States (TSUS), as telephone switching apparatus, rather than under item 684.58, TSUS, as a telephone set. You assert that your key telephone station can be used only with your telephone switching apparatus, and cannot be connected directly through the telephone lines. You, therefore, believe it should be classified as a part of a telephone switching system.

Pursuant to General Headnote 10(ij), TSUS, a tariff provision "for 'parts' covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such part." Accordingly, the question presented is whether item 684.58, TSUS, "more definitely describes the article" as a telephone set, thereby prevailing over item 684.57, TSUS, which would provide for the article as telephonic switching apparatus, parts. United States v. Penbrant Electronics, Inc., 64 CCPA 1, 6, C.A.D. 1175 (1976).

The requirement that the subject article can only be used in conjunction with your key telephone switching apparatus, rather than through direct connection to outside telephone lines, does not change its identity, character, or use as a telephone set. The provision for telephone sets, item 684.58, TSUS, is not limited to instruments which can be directly connected to an outside line. More important, even though the device can only be used in conjunction with your key telephone switching apparatus, its identity, character, and use as a telephone set is not altered.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

CS

The key telephone station is accurately described by the classification which recognizes its chief use as a telephone set. Consequently, General Headnote 10(ij) precludes classification as a part of a telephone switching apparatus under item 684.57, TSUS, and it must be classified under the specific provision for a telephone set in item 684.58, TSUS.

Sincerely,

(Signed) RUSSELL J. ARNOLD

S. Richard Shostak, Esq.
Stein Shostak Shostak & O'Hara
3580 Wilshire Boulevard, Suite 1240
Los Angeles, California 90010-2597

Dear Mr. Shostak

In your letter of December 12, 1985, on behalf of Rockwell International, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain foreign-made microelectronic circuits, filters, resistors, transistors, diodes, and capacitors, that are inserted into printed circuit boards in the United States by an automatic (auto) process and exported to Mexico as subassemblies for further assembly into lightwave and microwave transmission systems, which are returned to the United States.

It is stated that the components to be inserted by the auto process will be in kit form, referred to as kit No. 0674, and the subassembly, along with other components exported to Mexico will also be in kit form No. 0648. Large quantities of components will be auto inserted in the United States on printed circuit boards and exported to Mexico along with other components for final assembly.

In Mexico, the exported components will be wave and hand soldered and inspected after final burn-in testing. Auto insertion is defined as a manufacturing process consisting of automated mechanical placement, positioning of leads, inserting, and cutting and clinching of electronic components of various configurations into printed circuit boards. During the auto insertion cycle, the placement and insertion of components takes place in a series of steps designed to feed the parts to the auto inserter equipment. Printed circuit boards are positioned and held in place on a movable worktable which travels along an X and Y axis at right angles to each other. As the component positioning takes place, the drivers insert the component into the board in a downward movement while the leads pass downward into the cut-and-clinch units of the machine and are cut to specified length and clinched to the board. Upon completion of the cycle, the components are said to be permanently inserted and dedicated to the board and are ready for wave and hand soldering when exported to Mexico. Basic guidelines are designed for the blank boards to achieve maximum efficiency of the automatic process.

c1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

It is stated that about 80 percent of the discrete electronic components, or about 400 selected components of both foreign and domestic origin will be inserted into domestically made board blanks in the United States. Approximately 100 or so components will be exported and manually stuffed and welded to the boards during the final assembly. Final steps consist of cleaning the boards to remove contaminants and testing and final burn-in as a quality control measure to screen out defective and marginally defective components. Acceptable assemblies will be returned to the United States.

With respect to a foreign assembly, item 807.00, TSUS, provides for exported United States components that are designed to be fitted with other components in an assembly process, with no operations performed thereon except for attachment of the components to form the imported merchandise and operations incidental thereto.

In order for an article to be considered substantially transformed into a new product, it must undergo a manufacturing operation that results in the emergence of a new and different article having a distinct name, character, or use, different from that previously possessed by the originally imported article. In this respect, we agree that the auto insertion of some 400 components of mixed origin into circuit board blanks, with a substantial degree of permanence and dedication attached to the overall integrated pattern, would amount to such a conversion that results in a new and different article of commerce. The identity of each component is lost and becomes subordinated and merged into a new identity with a new name, character, and use.

Since the interim operations done in the United States appear sufficient to have transformed the foreign components into a domestic product, the printed circuit board, allowances may be made for their value under item 807.00, TSUS, upon compliance with the regulations.

Sincerely,

(Signed) RUSSELL ARNOLD

CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15)

553945

MAR 10 1986

CLA-2 CO:R:CV:V
553975 MR
815552 NY

Leonard M. Fertman, Esq.
2049 Century Park East, Suite 1800
Los Angeles, California 90067

Dear Mr. Fertman:

In your letter dated September 6, 1985, you requested a ruling on behalf of your client, Phone-Mate, Inc., concerning the classification of certain telephone devices identified as Phone-Mate Model No. 8050 and Phone-Mate Model No. 9750. Both are manufactured in Japan.

Both Phone-Mate Models at issue consist of a telephone, telephone answering/recording mechanism with remote activation/playback capability, and digital display clock. You state that the Model 9750 also has "2 lines, 3-way conferencing and capability of multiple greetings."

In your letter, you assert that the Phone-Mate should be classified under item 678.50, Tariff Schedules of the United States (TSUS), as a machine not specially provided for; or a combination machine containing a tape player. In the alternative, you assert the proper classification would be under item 676.30, TSUS, as an office machine not specially provided for.

You state that the subject article is more than telephone apparatus, thereby precluding classification under item 684.58, TSUS. Specifically, you believe that the subject article's clock, beeperless remote capability, and recording capability for use as dictating machine involve significant non-subsidiary functions which are not included in the definition of telephone apparatus.

Item 684.58, TSUS, specifically provides for telephone sets and other terminal equipment and parts thereof. The question presented is whether the subject article is, in character or function, something other than telephone apparatus as described by this provision - either more limited or more diversified. If the difference is significant, classification is precluded. However, if the difference is in the nature of improvement or amplification, and the essential character of the article is preserved or only incidentally altered, the applicable rule is that an ec nomine statutory designation includes all forms of the article in the absence of a contrary legislative intent or commercial designation. Robert Bosch Corp. v. United States, 63 Cust. Ct. 96, 103-104, C.D. 3881 (1969).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C9

The presence of the digital display clock is incidental to the function of the subject article. Moreover, the physical joinder of a telephone answering/recording function to a telephone does not in and of itself render the subject article excluded from its normal provision as a telephone set. The recorder function, remote playback, and multiple lines capability all relate primarily and directly to the function of the Phone-Mate as a telephone set; they contribute only to a certain improvement and amplification of telephone function in a subsidiary and auxiliary manner, by allowing automatic telephone answering and telephonic message receiving.

The capability of receiving and transcribing dictation is nothing more than incidental to the presence of a recording function in the telepone set. It is a "feature" rather than a co-equal function. It does not alter the subject article's essential character as a telephone set more than incidentally. Most important, it does not approach contributing as much as the telephone function does to the identity of the Phone-Mate as anything other than a telephone set.

Consequently, the Phone-Mate, Models No. 8050 and No. 9750, are specifically described and are properly classified as telephone sets under item 684.54, TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

Post Office Drawer 2800
El Paso, Texas 79999-2800

Dear Mr. Chavez:

Re: LC No. 86-0003

In your letter of January 21, 1986, on behalf of Seamless Hospital Products Company, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain articles identified as dry jar humidifiers and nebulizers which are proposed for assembly in Mexico from components of United States origin.

Samples, photographs, and an assembly process description were submitted. Humidifiers and nebulizers are described as medical devices for maintaining humidity and reducing a medical solution to a fine spray, respectively. Both are sold in case quantities to hospitals, nursing homes, and similar health care facilities, and will be sterilized after importation into the United States. The units are assembled in a product capacity range from 250 ml. for humidifiers to 500 ml. for nebulizers.

The components are listed as injection molded plastic jars, brass poppets, humidifier jar cap and poppet assemblies, cap and nut assemblies for both products. Polybags, cartons, and polyethylene film in rollstock, are also exported from the United States.

In the assembly process, the exported plastic jars are first conveyed through a gas flame to removes all oils and residues as a preparation for subsequent screen printing of such data as product and lot number, identification as humidifier or nebulizer, and jar capacity. The remaining operations consist of staking brass poppets to the cap assemblies, joining tubing to diffusers, and mounting the stem assemblies on the respective product jars. Final steps consist of packaging the units by means of a Bodolay bagging machine which draws sheets of exported polyethylene film from a roll, seals three sides to form a bag and seals the fourth side to enclose the packaged jar units within. They are then packed, some 50 packaged units to a shipping carton which is labeled and sealed for return to the United States.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

C11

With respect to a foreign assembly, item 807.00, TSUS, provides for the assembly of American components that are exported in condition ready for assembly without further fabrication.

On the basis of the samples, photographs, and descriptive literature, allowances may be made under item 807.00, TSUS, for all component parts making up the completed articles, upon compliance with regulations. This would include the bags that are made from sheets of polyethylene film exported on a roll, cut and sealed on three sides to form the pouches. Removing oils and other contaminants and printing identifying data on the jars are considered incidental to the overall assembly.

Shipping cartons and labels as a part of packaging materials may be returned free of duty under the provisions of General Headnote 6(b)(i), TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

Luis Chavez, Esq.
Kemp, Smith, Duncan & Hammond
Attorneys at Law
Post Office Drawer 2800
El Paso, Texas 79999-2800

Dear Mr. Chavez:

Re: LC No. 86-0004

In your letter of January 21, 1986, on behalf of Seamless Hospital Products Company, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to Bubbler H/O humidifiers, Product Nos. 300-20033800 and 300-20033500, that are proposed for assembly in Mexico from components of United States origin.

Samples, photographs, and a description of the assembly process were submitted. The humidifiers are medical devices generally used in hospitals, nursing homes and similar health care facilities, for maintaining humidity.

The components are listed as brass poppets, plastic molded poppet housings and whistle chambers, cap and nut assemblies, diffusers, plastic tubes ranging in length from about 4 1/2 to 6 3/4 inches, port caps, and polybags. The assembly operations merely consist of combining all the exported components together, first by aligning the brass poppets and whistle chambers into the poppet housings, and fitting the poppet assembly into cap housings, all carried out in an assembly fixture conveyor system. The tubes and diffusers are joined, port caps are fitted over airflow outlets, and the tubes are inserted within the underside of the cap assemblies. Some assembled humidifiers (No. 300-20033800) are placed in mylar pouches and the open end is sealed in a Chaffee sealing machine using heat and pressure. The remaining humidifiers are bagged in Bodolay machines, which draw sheets of polyethylene film exported in rollstock form. Two sheets are used to make a bag by first sealing three sides with the humidifier inserted within and sealing the open end closed. Some bagged units are packed 128 to a shipping carton while others are packed 228 to a carton. Lot numbers are stamped on shipping labels which are attached to sealed cartons for return to the United States.

With respect to assembly operations, item 807.00, TSUS, provides for the assembly of American components that are exported in condition ready for assembly without further fabrication.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C13

On the basis of the sample products, photographs, and description of the assembly operations, allowances may be made for the value of the exported components, including the paper and mylar rollstock materials, that are merely joined in an assembly abroad. Cutting the rollstock material is considered incidental to its assembly into pouches enclosing the assembled humidifiers within, after the pouches are made from sheets of film pulled from the exported rolls.

Sincerely,

(Signed) RUSSELL ARNOLD

SUBJECT: Further Reconsideration PFR 0901-3-000413 Buffalo - Wall Covering Material

This has reference to your memorandum dated January 10, 1986, requesting a further review of a partial denial of item 807.00, Tariff Schedules of the United States (TSUS), to polyester/cotton scrim material that is exported in long material lengths and laminated abroad with foreign vinyl material. This was the subject of a previous ruling dated May 20, 1985, 553617, and memorandum dated November 26, 1985, 553787.

Scrim fabric substrate material was exported to Canada in continuous rolls measuring about 62 1/2 inches wide and laminated abroad with foreign-made vinyl material by means of a calendering process. The 62 1/2 inches wide laminate was trimmed on each side to 54 in. widths. The wall covering material was then returned to the United States in commercial rolls measuring 54 in. wide x 30 yd. long, the laminated continuous rolls having been cut to 30 yd. lengths. Or, the material may be returned in retail size rolls measuring 27 in. wide x 5 1/3 or 10 2/3 yd. long, making up single and double rolls, respectively. During the take-up process, the laminated material was also slit down the middle by introducing a third knife in order to form two 27 in. widths. The imported laminated materials are regarded as piece goods and will be cut to size and shape after importation.

The claim is made in the present memorandum that item 807.00, TSUS, should be equally applicable to both commercial (54 in. x 30 yd. long) and retail sizes (27 in. wide x 5 1/3 or 10 2/3 yd. long), on the ground that there is no further fabrication of the already laminated materials, except for the addition of a third knife which slits the 54 in. wide material into two 27 in. rolls.

Notwithstanding whether or not the imported materials may be classifiable under Schedules 3 or 7, TSUS, we remain of the position that exported uncut fabric materials that are cut according to a pattern or shape

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D1

abroad are not regarded as fabricated components at the time of exportation from the United States under item 807.00, TSUS. See sec. 10.14 et seq. of the regulations for fabricated components that are subject to the tariff exemption distinguished from those that are not. Cutting continuous rolls of material both as to length (5 1/3 and 10 2/3 yd.) and width (54 in. slit to form two 27 in. widths) is regarded as making fabricated components from material exported in continuous roll form. Fabricating components abroad from exported material lengths is not within the contemplation of item 807.00, TSUS.

As stated in E. Dillingham, Inc. v. United States, C.A.D. 1078 (1972), the correct starting point for the application of item 807.00, TSUS, is the condition of the components as exported from the United States.

Further, the scrim fabric exported in long continuous length rolls was returned after lamination in both retail and commercial sizes ready for sale and distribution. Fabrications (cutting to both length and width) performed on exported component materials either before, during, or after assembly, merely show that the components were not in condition ready for assembly at the time of exportation from the United States. See Zwicker Knitting Mills v. United States, C.A.D. 1240 (1980), where knitted glove shells were exported in an open-fingered state and sewing the finger tips closed after assembly with leather palms was regarded as a further fabrication of the exported glove shells.

Accordingly, upon further review of the information submitted, it still remains our position that trimming the laminated rolls to 54 in. widths and cutting to 30 yd. lengths are operations considered incidental to the assembly. On the other hand, cutting the laminated rolls to length and width, 5 1/3 or 10 2/3 yd., and 27 in., respectively, would constitute a fabrication of the exported scrim material, contrary to the requirements of item 807.00, TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

FEB 6 1986

CLA-2 CO:R:CV:V
553998 EM

Mr. Phillip A. Aronoff
President
Intercontinental Steel Corp.
Post Office Box 24534
Houston, Texas 77029

Dear Mr. Aronoff:

In your letter of January 22, 1986, you asked about the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to steel scrap that you propose to export to Mexico for conversion into pipes and tubes and which in turn will be returned to the United States for further processing.

You explained that the exported steel scrap would be melted down, poured into ingots, and extruded into pipes and tubes. The ends of the returned pipes and tubes would be threaded and fitted with couplings in the United States.

With respect to duty allowances for articles of metal made abroad from United States-made base metal, item 806.30, TSUS, requires further processing to be performed on exported articles both in the foreign country and again upon return to the United States. In order to meet the requirements of "further processing," some operations must be applied to the metal articles that will change their shape or form or impart new and different characteristics that did not exist before and which become an integral part of the metal itself.

On the basis that steel scrap of United States origin is exported and converted into pipes and tubes which are returned for further processing by threading, and cutting when necessary, it appears that both the foreign and domestic segments of the processing cycles are met.

However, only steel scrap resulting from articles of United States manufacture (as distinguished from articles of foreign manufacture) is a metal article of United States manufacture for purposes of item 806.30, TSUS. Mere purchase of scrap material in the United States is not conclusive proof that it is of United States manufacture. Accordingly, unless satisfactory proof is supplied to show that the scrap articles were made in this country and not imported from abroad, the Mexican-made tubular products would not be eligible for item 806.30, TSUS, treatment.

Sincerely,

D3

El Paso, Texas 79985

FROM : Chief, Value and Special Classification Branch

SUBJECT: Internal Advice Request No. 24/85, Concerning the Tariff Treatment of Electronic Capacitors Returned to the United States After Being Sent Abroad for Cleaning, Testing, and Sorting

In your memorandum of January 17, 1985, you requested internal advice concerning the applicability of item 806.20, Tariff Schedules of the United States (TSUS), to capacitors reimported after cleaning, testing, and sorting.

FACTS:

The capacitors are made in Finland. Some of the capacitors are exported to Mexico, where they are placed in a cleaning tub which contains a mixture of detergent and water. They are washed, rinsed, and dried. The capacitors are then inspected mechanically and bent leads are straightened. The latter is required by approximately 20 percent of the capacitors.

The capacitors are tested and sorted according to electrical properties. This results in a separation of the capacitors into 10 to 14 separate lots, which, after a sample inspection, are packaged in boxes, usually by the hundred. The packages are marked with the tolerance and "Finland," the country of origin.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

D4

You recommend a classification of the capacitors under item 806.20, TSUS, because the cleaning operation prior to testing, inspecting, and sorting the capacitors constitutes an alteration.

ISSUE:

Whether the operations performed on the capacitors in Mexico constitute an alteration within the meaning of item 806.20, TSUS.

LAW AND ANALYSIS:

The application of item 806.20, TSUS, is provided for "Articles returned to the United States after having been exported to be advanced in value or improved in condition by any process of manufacture or other means." In our response of August 17, 1978, to I.A. 60/78, file No. 055153, concerning the classification of potentiometers imported into the United States after being exported for testing and separation in El Salvador, this office stated that the testing and separation did not advance the potentiometers in value or improve them in condition by repair or alteration. Thus, classification under item 806.20, TSUS, was precluded. However, it was noted that subjecting the potentiometers to a cleaning operation would be considered sufficient to constitute an alteration, thereby permitting application of item 806.20, TSUS.

Upon being exported to Mexico, the capacitors in question undergo a cleaning operation, as well as a testing and sorting operation. Although the entire inventory of the capacitors undergoes the cleaning operation, the procedure does not result in a change in the electrical properties or identity of the capacitors; rather, their physical condition is somewhat improved. Likewise, the sorting of the capacitors results in the improvement of approximately 20 percent of the capacitors, through the sorting

554002

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

DS

and also straightening of bent leads. Accordingly, the work performed on the capacitors is sufficient to constitute an alteration, and make item 806.20, TSUS, applicable.

Concerning the question of marking the capacitors, 19 U.S.C. 1304 provides that every article of foreign origin imported into the United States be marked to indicate the country of origin. Pursuant to section 134.32(d), Customs Regulations, an exception to this requirement may be authorized if the district director is satisfied that the procedure for repackaging the merchandise will sufficiently indicate to the original equipment manufacturer the English name of the country of origin, "Finland," and if the district director is satisfied the marked unopened package will reach the original equipment manufacturer, as outlined by the importer. However, because of information concerning the final purchaser, apparently an original equipment manufacturer, is incomplete, we cannot render an opinion.

554002

HOLDING:

The merchandise at issue is classifiable under item 806.20, TSUS, upon compliance with the regulations.

Sincerely,

(Signed) RUSSELL ARNOLD

CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

2 APR 1986

CLA-2 CO:R:CV:V
554005 MR

Steven P. Kersner, Esq.
Brownstein Zeidman and Schomer
1401 New York Avenue, NW.
Washington, D.C. 20005

Dear Mr. Kersner:

This is in regard to your letter and memorandum of August 14 and October 8, 1985, wherein you requested a ruling on behalf of Olympus Corporation that the Olympus VX-402 VHS Movie System is properly classified under the tariff provision for television cameras in item 684.90, Tariff Schedules of the United States (TSUS), or, alternatively, under the provision for electrical articles not specially provided for — other; other; in item 688.42, TSUS.

You state that the subject article is properly classifiable as a television camera under item 684.90, TSUS, because you believe the VX-402 is much "less than" a VCR which would be sold for use in the home; specifically, you believe the recording function of the VX-402 is incidental, subordinate, and secondary to the subject article's primary function as a television camera. Finally, you state that if the subject article is determined to be "more than" a television camera, it is properly classifiable as an electrical article not specially provided for — other, in item 688.42, rather than as a combination tape recorder television camera in item 685.49, TSUS.

The combination, commonly known as a "camcorder," consists of a VHS format video camera and video tape recorder incorporated into a single hand-held device. Through such features as a power zoom lens, unidirectional microphone, and electronic viewfinder, it can make audio/visual recordings of live scenes. Also, it may be used to view prerecorded video tapes, either on the device's built-in electronic viewfinder, or through direct connection to a television set. The VX-402 can record directly from another video source such as television with A/V output, or transmit taped video signals to a video cassette recorder for editing, dubbing, and duplication as desired.

Item 684.90, TSUS, provides for television cameras and parts thereof. A television camera is defined as "[a]n electrooptical [sic] system used to pick up and convert a visual image or scene into an electrical signal called video." McGraw-Hill Encyclopedia of Electronics and Computers 833 (S. Parker ed. 1984). The subject article contains such an electro-optical system. However, as is outlined in promotional material concerning the VX-402, its capabilities exceed that of a television camera.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D1

The "camcorder" not only picks up and converts visual (and audio) scenes into video/audio signals, it can store those signals on magnetic media and reconvert those recorded signals into electrical signals for purposes of showing the recorded scene. The latter function can be used to show a recorded scene on either the view finder screen or, upon direct connection, on a television screen. It can also record upon direct connection to either a television or a video recorder, rather than through the electro-optical system. Accordingly, it can be used as either a television camera or video tape recorder.

Where an article is, in character or function, something other than as described by a specific statutory provision — either more limited or more diversified, and the difference is significant, it cannot find classification within such provision. Dan-Dee Imports, Inc. v. United States, 7 C.I.T. ____ Slip Op. 84-49 (Apr. 30, 1984); Robert Bosch Corp. v. United States, 63 Cust. Ct. 96, 103, C.D. 3881 (1969). However, where the difference is in the nature of improvement or amplification and the essential character of the article is preserved or only incidentally altered, the applicable rule is that an unlimited eo nomine statutory designation includes all forms of the article in the absence of a contrary legislative intent or commercial designation. Dan-Dee Imports, supra; Robert Bosch, 63 Cust. Ct. at 104.

In determining whether the subject article is more than a television camera, it is necessary to look to the functions of the recorder, which broadens the status of the device. See United States v. Milton Diamond and Massee-Barnett Co., Inc., 42 CCPA 9, C.A.D. 561 (1954). In V. Alexander & Co. Inc. v. United States, 59 Cust. Ct. 510, C.D. 3212, the court, in holding a combination phonograph and radio not to be a phonograph, stated:

> An article will be excluded from its normal provision when, by virtue of joinder with another article, it becomes an inseparable part of a multifunction entity. That is to say, when the change undergone is no longer merely an evolutionary advance or the addition of a subsidiary auxiliary part, the changed article becomes more than it formerly was. Id. at 514

The "camcorder" at issue incorporates into one integral unit the separate function of both a television camera and video tape recorder. The recorder function exceeds mere facilitation of the television camera function. Specifically, the capability to record directly off a television set or another video recorder is not a function inherent in a television camera, it does not relate primarily or directly to the function of a television camera. Accordingly, even though the recorder

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D8

554005

portion is designed for some use in conjunction with the function of the television camera, it does not make the recorder a part of the camera. See United States v. Willoughby Camera Stores, Inc., 21 CCPA 322, T.D. 4685 (1933); Garrard Sales Corp. v. United States, 35 CCPA 39, C.A.D. (1947).

The inability of the recorder portion to record more than two hours and the absence of "time shifting capabilities" pertain to ancillary features of a video tape recorder, and do not render the recording function subordinate to the television camera function of the subject article. The recorder and the television camera functions are equal in that they are both essential in giving the subject "camcorder" its unique character. Each contributes as much to the identity of the complete multifunction unit as the other. See Sherriff-Guerringue v. United States, 62 Cust. Ct. 711 C.D. 3852 (1969). The subject article is therefore more than a television camera, and classification as such in item 684.90, TSUS, is precluded.

The VX-402 "camcorder" is a combination television camera and video tape recorder. The relevant superior heading, immediately preceding item 684.90, TSUS, is unambiguous in referring to "Radiotelegraphic and radiotelephonic transmission and reception apparatus... and television cameras ... tape recorders..., all of the foregoing, and any combination thereof, whether or not incorporating clocks or other timing apparatus...."

Consequently, the subject "camcorder" is specifically described and provided for as an entirety, and is properly classified as a combination tape recorder television camera under item 685.49, TSUS.

Sincerely,

(Signed) Harvey B. Fox

Sandler & Travis, P.A.
Attorneys at Law
Rivergate Plaza
444 Brickell Avenue
Miami, Florida 33131

Dear Mr. Linet:

In your letter of November 22, 1985, on behalf of GTE Products Corporation, you asked about the classification and the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain Tru-Beam reflector base lamp assemblies used for projection equipment, produced in Mexico from components of United States origin.

Photographs of the foreign operations were submitted. The finished lamp product results from combining both mounted coil and reflector-base sub-assemblies. The exported components are listed as a halogen lamp capsule-clip welded together, reflector base, base pins and RTV cement, in addition to packaging materials.

The foreign process consists of joining the lamp capsule-clip assembly to the reflector base assembly and welding the clip/lamp capsule to the inner surface of the reflector base after proper focus of the lamp is obtained. The lamp base is etched with identifying specifications and the lamp lead wires are welded to the base pin wires. Final operations consist of testing the lamp assembly for continuity and arcing and packing the assembled products for return to the United States.

With respect to a foreign assembly, item 807.00, TSUS, applies to United States components that are designed to be fitted with other components in an assembly process, with no operations performed thereon except the attachment of the components to form the imported merchandise and operations incidental thereto.

On the basis of the information submitted, allowances may be made under item 807.00, TSUS, for those exported components of United States origin, that enter into the foreign assembly process without further fabrication. Since only assembly operations appear to take place, allowances may be made under the tariff provision for all exported fabricated components, upon compliance with the regulations.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

D10

With respect to classification, the imported merchandise is described as halogen lamps and if imported complete with the basic operating capsule, as described, they would be classifiable under the provision therefor, in item 686.90, TSUS.

Generally, packaging materials of United States origin that are not advanced in value or improved in condition while abroad may be entered free of duty under the provisions of General Headnote 6(b)(i), TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

9 APR 1986

CLA-2 CO:R:CV:V
554009 MR
816906 NY

Mr. G. J. Muller
Black & Decker, Inc.
U.S. Household Products Group
6 Armstrong Road
Shelton, Connecticut 06484

Dear Mr. Muller:

In your letter of January 15, 1986, you requested a ruling on the classification of an electronic control assembly which you propose to import into the United States. The device would be incorporated into a drip coffeemaker.

You believe the subject article is properly classifiable under item 684.55, Tariff Schedules of the United States (TSUS), as parts of coffeemakers, rather than under 685.90, TSUS, as control panels or electric switches. You state that the design and function of the electronic control assembly makes the subject article more than a simple device to control electricity. You indicate that it is purchased and shipped as an entirety and manufactured only for use in a drip coffeemaker. You also state that the chief use of the subject article is not as "a simple switch device" to activate a drip coffeemaker, but rather "to select a brewing starter cycle." You believe that because of the multi-function character and design of the subject article, classification of electric switches does not describe or define the article.

The electronic control assembly is described as being comprised of a controller module, which contains signal lights, an AM/PM indicator light, and time set buttons, affixed to a power relay module. The latter provides the AC power to the controller module. These components, with two printed circuit boards, are mounted on a plastic adapter plate.

Pursuant to General Headnote 10(ij), TSUS, a tariff provision "for 'parts' covers a product solely or chiefly used as a part of such articles but does not prevail over a specific provision for such part." The subject unit is specifically designed for use in a drip coffeemaker, thereby coming under the first portion of General Headnote 10(ij), TSUS. However, the essential use of the subject unit is for electrical control of the drip coffeemaker. Although the subject unit permits certain functions to be performed automatically, it does so only at the direction of the operator.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D12

The sole purpose of the assembly is to permit the operator to control the starting of brewing by the coffeemaker. Neither the sophistication of the components of the subject article nor the "twenty-four hour control" transforms the subject article into something more than a device which, at the direction of the operator, electrically controls the drip coffeemaker.

The subject article is recognizable as an entirety and is specifically provided for as a control panel in item 685.90, TSUS. Consequently, General Headnote 10(ij) precludes its classification as a part of a coffeemaker under item 684.55; the electronic control assembly in question would be classified under the provision for a control panel in item 685.90, TSUS.

Sincerely,

(Signed) RUSSELL ARNOLD

8 APR 1986

CLA-2 CO:R:CV:V
554010 MR

Mr. Donald Harrison
Miller and Chevalier
Metropolitan Square
655 Fifteenth Street, NW.
Washington, D.C. 20005

Dear Mr. Harrison:

In your letter of January 24, 1986, you requested a ruling on the classification of "microprocessor/oven control/timer units" which Motorola will import for use in the manufacture of microwave ovens. In the memorandum in support of your request, you describe the unit as a microprocessor programming device that comprises a substantial portion of the operating part of a microwave oven, including a probe thermostat function, a timer function, and a clock function.

You believe the subject unit is properly classifiable under item 684.28, Tariff Schedules of the United States (TSUS), as parts of microwave ovens, rather than under item 685.90, TSUS, as control panels or apparatus for making or breaking electrical circuits.

You contend that the term "control panel" is limited to a "simple" manual combination of switches and related components and does not cover a "sophisticated" product which includes a microprocessor, thermostat, and other operating parts of a microwave oven. In support, you have cited the definitions of control panel in the Brussels Tariff Nomenclature, contending that they cover an assembly of "simple" electrical apparatus rather than a unit having as its principal component a "complex" microprocessor which controls timer, clock, and other functions automatically. Moreover, you state it is understood that a control panel contains switches which may be controlled manually by an operator, and is limited to power circuits with limited functions.

According to descriptive literature submitted by you, the merchandise in question is a unit which is used to operate a microwave oven. You state that it consists of a metal chassis with a plastic front surface containing "touch pads" used to activate various functions of the unit. By activating one or more of the "touch pads," one can control all functions of the microwave oven, including the time and temperature of cooking. A digital clock is at the top of the panel. The subject device also emits an audible signal.

Pursuant to General Headnote 10(ij), TSUS, a tariff provision "for 'parts' covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such part." It is not disputed that the subject units are specifically designed for use in

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

microwave ovens, thereby coming under the first portion of General Headnote 10(ij), TSUS. However, the question remains, under the second portion of General Headnote 10(ij), whether item 684.28, TSUS, "more definitely describes the article" as a control panel, thereby prevailing over item 684.28, TSUS, which covers parts of microwave ovens. United States v. Rembrandt Electronics, Inc., 64 CCPA 1, 6, C.A.D. 1175.

The Explanatory Notes to the Brussels Tariff Nomenclature provide guidance concerning the term "control panels." Specifically, Section XVI, Chapter 85.19 provides, in pertinent part:

> These consist of an assembly of apparatus of the kind referred to above (e.g., switches, fuses and rheostats) on a board, panel, framework, etc. or mounted in a cabinet, desk, etc. They usually also incorporate meters, and sometimes also subsidiary apparatus such as transformers, valves, or voltage regulators or luminous circuit diagrams. They are classified here provided their essential use is for electrical control purposes (i.e., provided that they do not incorporate any substantial proportion of the operating part of the machine or installation controlled).

The essential use of the subject merchandise is for electrical control of the microwave oven. Its principal components are a "programmable microprocessor," "beeper/annunciator," "quad comparator," "heat sinked triac," and "vacuum fluorescent display," all of which work to the same end, which is electrical control of the microwave oven. There is nothing, explicit or implicit, within the above-cited Explanatory Notes concerning a control panel which suggests a need to consider whether the subject merchandise requires continuous operator supervision. Indeed, while the subject item permits certain functions to be performed automatically, it does so only at the direction of the operator. The "temperature probe" cycle and "timed cook" cycle occur only after the components have been programmed by the operator. The sole purpose of the device is to permit the operator to control the quantity of heat produced by the oven for a given period of time. Although the components are apparently more sophisticated than those given by the Brussels Nomenclature as some examples of the apparatus within an assembly, they do no more than simply permit operations that are fundamental to a control panel.

As articulated by the court in All Channel Products Corp. v. United States, 1 C.I.T. 128 (1981), the question presented is whether the subject article "possesses a distinct and significant part whose function is inconsistent" with classification as a control panel. Id. at 130. Neither the sophistication of the components, nor the incidental timer and time-of-day clock functions transforms the article into something other than a device which, at the direction of the operator, electrically controls the oven.

554010

E1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The manner in which the components of the subject article function towards electrical control of the microwave oven is not of particular importance because the complexity of the components does not make the subject article recognizable in a classification more specific than control panel. Harper - Wyman Company v. United States, 1 C.I.T. 108 (1981).

The subject article is accurately described as an entirety by the classification which recognizes its chief use as a control panel. Consequently, General Headnote 10(ij) precludes classification of the subject article as a part of a microwave oven under item 684.28, TSUS, and it must be classified under the specific provision for a control panel in item 685.90, TSUS.

Sincerely,

Mr. J. T. Greitzer
Greitzer Brokers
Customs Clearance
Post Office Box 3997
San Ysidro, California 92073

Dear Mr. Greitzer:

In your letter of November 29, 1985, and the followup of February 6, 1986, on behalf of MONSA, you asked about the applicability of item 806.30, Tariff Schedules of the United States (TSUS), to automobile wheel rims that are proposed for export to Mexico for processing and returned for further processing.

You explained that wheel rim outers and centers will be exported to Mexico for plating, polishing, and drilling a valve stem hole through the metal. Upon return to the United States, the outer rims and centers will be inspected and ground as a preparation for welding the parts together to form complete wheels.

Item 806.30, TSUS, requires the processing of metal articles both abroad and again upon return to the United States. The term "further processing" means that some operations will be applied to the metal articles that will change their shape or form significantly or impart new and different properties and characteristics to the metal itself that did not exist before the processing.

With respect to the foreign processing of the outer rims and centers, the combined operations of plating and drilling valve-stem holes through the metal would appear to constitute a significant treatment of the metal to comply with the foreign segment of item 806.30, TSUS. However, the main operation performed on the rims and centers upon return to the United States consists of merely welding the parts together to form wheels. Grinding the centers and rims is a preparation for the subsequent welding of the parts together. As the finishing step in the manufacture of wheels, assembling the parts together does not constitute further processing within the meaning of item 806.30, TSUS. In these circumstances, the requirements of "further processing" in the United States are not complied with and the rims and centers are not entitled to item 806.30 tariff relief upon return to the United States.

Sincerely,

(Signed) RUSSELL J. ARNOLD

Mr. Phillip A. Aronoff
President
International Steel Corporation
Portway Plaza, Suite 400
1717 East Loop
Houston, Texas 77029

Dear Mr. Aronoff:

In your letter of February 10, 1986, you asked that we reconsider the status of steel scrap under item 806.30, Tariff Schedules of the United States (TSUS), which you intend to export to Mexico for conversion into pipes and tubes, and in turn will be returned to the United States for further processing. This was the subject of a previous letter dated February 6, 1986, 553998.

The term "waste and scrap" is defined in the Tariff Schedules as materials and articles of metal which are second-hand or waste or refuse, or are obsolete, defective or damaged, and which are fit only for the recovery of the metal content or for use in the manufacture of chemicals, and does not include metal in unwrought form or metal-bearing materials.

The Customs Service has consistently adhered to the tenet over long years that item 806.30, as well as its predecessor tariff provision, is inapplicable with respect to metal scrap resulting from the processing of metal of foreign origin, because such scrap is not regarded as "metal manufactured in the United States"; nor is the scrap an article of metal subjected to a process of manufacture in the United States. In order to remain eligible under the statute where foreign metal is involved, the scrap must be obtained from processing metal initially obtained from processing the foreign metal in the United States.

In view of this, if the steel scrap is obtained from foreign-made metal, such as that obtained from reducing foreign automobiles, the scrap would not qualify for item 806.30 tariff treatment when exported.

Sincerely,

(Signed) RUSSELL J. ARNOLD

CLA-2 CO:R:CV:V
554014 EM

R. Ross Hempstead
President
Technology Transfer International, Inc.
3100 NE. 49th Street
Fort Lauderdale, Florida 33308

Dear Mr. Hempstead:

In your letter of January 23, 1986, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain articles described as thermal insulation wrappers or coverings, that will be made in Jamaica from component materials of United States origin.

Samples were submitted, including an insulated carrying vinyl case with the logo "Miller High Life" printed on the cover. It is explained that all materials, including polyurethane foam, vinyl materials making up the outer surface and inner liners, drawstrings, velcro closings, and nylon carrying straps, will be cut to component size-and-pattern shape before being exported to Jamaica. The foreign operations merely consist of sewing the component pieces together to form the finished vinyl products. The container products will be returned to the United States for sale and distribution and will be used to convey beer cans, among others, and used as outer liners for such unit devices as hot water heaters, and other similar articles requiring insulated covers.

With respect to foreign assembly operations, item 807.00, TSUS, applies to United States components that are designed to be fitted with other components in an assembly process, with no operations performed thereon except the attachment of the components to form the imported merchandise and operations incidental thereto.

On the basis of the samples and information submitted, allowances may be made under item 807.00, TSUS, for those exported components of United States origin, that enter into the assembly process without further fabrication. Since only assembly operations appear to take place abroad, as described, allowances may be made under the tariff provision for all exported fabricated components, upon compliance with the regulations.

Further, merchandise entering the United States under item 807.00, TSUS, is regarded as foreign made for tariff purposes and as such, is subject to all the country of origin marking requirements and quota

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

ES

restraints pertaining thereto. In this respect, it is suggested that you communicate with local Customs officials for the procedures that obtain in entering such merchandise.

John S. Rode, Esq.
Rode and Qualey
295 Madison Avendue
New York, New York 10017

Dear Mr. Rode:

In your letter of March 14, 1985, you requested on behalf of Federated Metals Corporation, a ruling regarding the GSP eligibility of sacrificial anodes of various alloys and in various configurations that are manufactured in Mexico. The anodes cathodically protect from corrosion pipelines and other metal structures located in environments containing water.

The galvanic anodes are made from Galvalum I and III, magnesium alloys and zinc alloys. All the materials for the production of the metal alloys come from Mexico. Pure aluminum ingot, which is used for making the anodes of Galvalum I and III pure zinc ingot and magnesium scrap are sourced outside Mexico.

In ruling 075858 dated May 22, 1985, Customs ruled that all the possible alternatives discussed in your submission are GSP-eligible item numbers for Mexican products. Accordingly, if the described galvanic anodes are considered products of Mexico they would be entitled to duty-free treatment. To be considered a product of Mexico, it must be shown that through a substantial processing operation, a new and different article of commerce emerges in Mexico with a new name, character or use. Duty-free entry may be accorded to an article only if the sum of the cost or value of the material produced in a beneficiary developing country plus the direct cost of processing operations performed in the beneficiary developing country is not less than 35 percent of the appraised value of the article at the time it is entered.

The first step in the making of all the anodes in Mexico with the exception of one type is the alloying process. In ruling 071341, Customs ruled that the alloying of aluminum is a substantial transformation because aluminum alloy has different characteristics and uses from non-alloy aluminum and is recognized in the trade as a different product. Following this precedent, it is our view that the manufacture of the metal alloys in Mexico from aluminum ingot, zinc ingot and magnesium alloy scrap is a substantial transformation. It should be pointed out that the magnesium alloys, after being properly manufactured to specification have electrical and chemical characteristics significantly different from magnesium alloy scrap.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E7

The second step in the making of the galvanic anodes involves similar, but not exactly the same operation for each particular type of anode. An example of the operation needed to make the galvanic anodes from the alloys is as follows:

To make anodes from Galvalum I and III, molten alloy is either poured directly from the tilt furnace or is ladled into the anode mold. As the anode begins to cool, it will shrink and additional alloy must be added to the mold. Prior to pouring the alloy into the mold, a specially designed steel core must be carefully and precisely positioned in the mold using gigs and fixtures. The steel cores, which are made in Mexico, are manufactured from steel which meets ASTM specifications. These cores must be carefully produced to ensure that there is no electrical resistance between the core and the anode material. The core must be located precisely in the mold and the casting must be done carefully; otherwise, the anode will be subject to catastrophic failure. After the cast rough anode has cooled, it is removed from the mold and subjected to a number of finishing operations and testing. Excess alloy is trimmed and flash burrs are removed. Some anodes will have copper cables welded to the steel core and others may receive some form of coating.

We are of the opinion that this second operation making galvanic anodes from the various alloys creates a new and different article of commerce. The finished galvanic anodes have distinct characteristics and uses from bulk alloy and are recognized commercially as new and different articles of commerce.

Accordingly, we conclude that the galvanic anodes are products of Mexico for purposes of GSP and that the costs of all materials sourced in Mexico, all direct costs of processing operations undertaken in Mexico including such items as labor and fuel, and the costs of the alloys that are used in the making of the finished galvanic anodes may be included within the 35 percent value-added requirement.

Sincerely,

(Signed) RUSSELL ARNOLD

CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

28 MAR 1986

CLA-2 CO:R:CV:V
554018 EM

John P. Tebeau, Esq.
Heron, Burchette, Ruckert
& Rothwell
Suite 700
1025 Thomas Jefferson Street, NW.
Washington, D.C. 20007

Dear Mr. Tebeau:

In your letter of February 8, 1986, on behalf of Nizetich and Company of San Pedro, California, you asked about the applicability of item 800.00, Tariff Schedules of the United States (TSUS), to certain cooked tuna that is intended for exportation to Mexico for canning and return to the United States. This was the subject of a similar letter dated November 26, 1985, 553900.

It is explained that raw frozen tuna would be cleaned, head and tail removed, and cooked and cooled, and subsequently exported to Mexico in refrigerated trucks for canning. In Mexico, the skin would be removed and the tuna would be passed through a mechanical process. The tuna would first be sized according to a solid, chunk, or flake style preparation, and packed in cans with either water, oil, or broth. The cans would be hermetically sealed in the ongoing process and the canned tuna would then be "retorted" by sterilizing in heated ovens at a high (280° F.) temperature for about 20 minutes.

Final operations consist of labeling the cans and packing the canned tuna in standard lot quantities for shipment to the United States. Cans, labels, and cartons and other ingredients added to the tuna, except water, during the foreign processing, are of United States origin.

As stated previously with respect to the canned tuna, item 800.00, TSUS, applies to products of the United States which are returned free of duty after having been exported without having been advanced in value or improved in condition by any means while abroad. The test specified is whether the merchandise of American origin has itself been the object of an advance in value or improvement in condition while abroad.

For the reasons that whole tuna is exported, the skin removed, and the tuna subjected to proper sizing during the processing and finally, after canning, subjected to the retorting process, cumulatively these processes amount to an advance in value and improvement in condition of the exported tuna, contrary to the requirements of the tariff provision. In the circumstances, the canned tuna is not entitled to the free entry provision of item 800.00, TSUS.

E9

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

Further, item 807.00, TSUS, mentioned as a possible classification, does not cover a situation in which containers of American origin are assembled and into which merchandise is packed. The tariff treatment of containers is more appropriately governed by the provisions of General Headnote 6(b)(i), TSUS. See Van Camp Sea Food Co. v. United States, C.D. 4551 (1974).

Nor does item 806.20, TSUS, appear to be available in the circumstances. This tariff provision applies to articles that are exported for repairs or alterations. However, the application of this provision is precluded where a foreign process goes beyond the meaning of a repair or alteration performed on exported articles. We are of the opinion that the foreign processing of the exported whole tuna is too extensive to be considered an alteration under item 806.20, TSUS.

Accordingly, the described imported canned tuna would be subject to duty on total value and quantity under the appropriate provisions of the tariff schedules. However, the exported cans and lids may be returned free of duty under the provisions of General Headnote 6(b)(i), TSUS, as the usual type of containers or holders ordinarily sold at retail with their contents. This would also include the labels and shipping cartons of United States origin.

With respect to the classification of the remaining ingredients, since an article is classifiable in that provision of the tariff schedules which most specifically describes it, and imported canned tuna is classifiable as an entirety, there can be no constructive segregation of the American preservative products, as the oil, broth, or protein, for different tariff treatment. These added ingredients cannot be separated out for different classification and their American origin becomes merged in the imported entity, the canned tuna.

Sincerely,

HS ~~TSUS~~
9804.00.1010 = 800.00
9802.00.8010 = 800.00

E10

554018

MAR 12 1986

CLA-2 CO:R:CV:V
555024 MR

District Director of Customs
San Francisco, California 94126

Dear Sir:

This is our decision on Application for Further Review of Protest No. 2809-4-000898, concerning entry 84-409615-7, dated January 23, 1984, and liquidated May 11, 1984. The merchandise involved is laminated plastic sheet material from Japan.

FACTS:

The subject merchandise, described by the protestant/importer as "polarizer," is composed of a layer of polyethylene terephthalate plastic united with a layer of polyvinyl acetate-polyethylene copolymer plastic. The subject material has polarizing properties and is used in the manufacture of liquid crystal displays. The subject material was entered under the tariff provision for cellulosic plastic materials, of cellulose acetate, in item 771.20, Tariff Schedules of the United States (TSUS). The entry was liquidated, however, under the provision for polarizing material, in item 540.67, TSUS.

ISSUE:

Whether the subject merchandise is polarizing material for tariff purposes and, therefore, more specifically provided for in item 540.67, TSUS, rather than in item 771.20, TSUS.

LAW AND ANALYSIS:

Protestant contends that the subject merchandise should be classified under the provision for cellulose acetate material, in item 771.20, TSUS. In the alternative, he argues that the proper classification would be under a provision for parts of liquid crystal displays, although no specific tariff provision was cited.

E11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Item 540.67, TSUS, provides for "polarizing material, in plates or sheets, not cut to shape or mounted for use as polarizing optical elements." There is no limitation as to the type of material. Indeed, according to the Tariff Classification Study Explanatory Materials (1964), item 540.67, TSUS, covers polarizing material of any substance, imported for "other uses" besides the manufacture of optical instruments and spectacles.

It is well established that the more specific tariff provision will prevail. The protestant refers to the subject material as "polarizer," and states that its sole use is as polarizing material in a liquid crystal display. The provision which most narrowly describes the subject sheets of polarizing material, not cut to shape, is item 540.67, TSUS.

Concerning the protestant's alternative contention, that the subject material should be properly classified as parts of liquid crystal displays, attention is directed to General Headnote 10(ij). Although the protestant cited no specific provision, such "parts" provision would not prevail over item 540.67, TSUS, which is a specific provision for polarizing material. Moreover, it is noted that before the material becomes a "part" of the liquid crystal display, it must be cut to shape. The latter does not take place until after the polarizer is imported.

HOLDING:

The subject material is properly classifiable under the tariff provision for polarizing material, in item 540.67, TSUS.

554024

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E12

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to satisfy the notice requirements of section 174.30(a), Customs Regulations, as amended by T.D. 80-271.

Sincerely,

(Signed) Harvey B. Fox
Harvey B. Fox
Director, Classification
and Value Division

24 MAR 1986

CLA-2 CO:R:CV:V
554034 EM

Frederick L. Ikenson, P.C.
1875 Connecticut Avenue, NW.
Washington, D.C. 20009

Dear Mr. Ikenson:

In your letter of February 4, 1986, on behalf of Zenith Electronics Corporation, you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to monochrome projection television tubes that are proposed for assembly in Mexico from component parts of United States origin.

A component parts list and a description of the foreign assembly process were submitted. The exported listed parts of United States origin include an electron gun, getter legs and base, housing with a glass window, silicon spacers separating the window from the housing and ryton spacers separating the tube face from the glass window, a film protector covering the glass window, an anode lead subassembly attached to the picture tube, and packing materials listed as corrugated caps, inserts, and liners for transporting the tubes set face-down within the case inserts, and finally, double-banding nine cases with ten tubes to a case on a skid for the return trip to the United States.

The foreign process consists of first treating the foreign-made glass bulb with various chemicals and a color screen and aluminizing the inner surface in order to prepare the screened aluminized glass bulb to receive the electron gun assembly sealed within. The television projection tube is inserted within a housing and heated to cure the various adhesive bonds around the window, between the tube and housing, and the plastic base protecting the pin connectors from damage.

The tube is tested for required electrical specifications and four small mounting holes are made in the housing to ensure proper alignment for the tube when mounted. Finally, the anode lead subassembly is bonded to the tube and the connection is electrically tested. The completed projection tubes are packed in cases and in turn banded to skids for return to the United States.

With respect to foreign assembly operations, item 807.00, TSUS, applies to United States components that are designed to be fitted with other components in an assembly process, with no operations performed thereon except the attachment of the components to form the imported merchandise and operations incidental thereto.

E14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

From the descriptions submitted, allowances may be made under item 807.00, TSUS, for the listed components of United States origin, that are exported in condition ready for assembly without further fabrication, which are marked with an asterisk in Exhibit 1. Drilling the four holes in the housing component appears necessary for alignment and as such, is considered incidental to assembly. No allowances can be made under the tariff provision for adhesives used in the assembly since they are regarded as having lost their identity in the assembly by a change in form or substance; nor can allowances be made for liquids, as the listed silicon oil.

Containers or holders and packaging materials of United States origin may be returned free of duty under the provisions of General Headnote 6(b)(i), TSUS, as the usual type unreusable containers ordinarily sold with their contents.

Sincerely,

(Signed) RUSSELL J. ARNOLD

CLA-2 CO:R:CV:V
554036 MR

District Director of Customs
Chicago, Illinois 60607

Dear Sir:

This is our decision on Application for Further Review of Protest No. 3901-5-000920, dated June 27, 1985, concerning entries 84-77807, dated September 18, 1984, and 84-778338, dated July 11, 1984. The entries were liquidated, respectively, on March 29, 1985, and April 5, 1985. At issue is the classification of certain kitchen timers. A brief from counsel representing the importer/protestant has been submitted.

FACTS:

The subject article is a kitchen timer, designated by the importer as a Pelouze Electrohorn Timer, Model MT-60. According to descriptive literature, it is a wedge-shaped article 4 inches deep, 6 1/2 inches wide, and 7 inches high. It has a handle on its top, and a dial with numerals on the front. The device can be set for any period of time up to 60 minutes; at the expiration of the selected time period an audio signal sounds and a red light blinks on and off. The signal and the blinking continue until a stop button is depressed.

The entries covering the Model MT-60 Timers were liquidated under the provision for "Apparatus with watch or clock movements... for measuring recording, or otherwise indicating intervals of time," other, in item 715.51, Tariff Schedules of the United States (TSUS). The importer/protestant maintains that the proper classification is under the provision for rubber or plastic household goods not specially provided for, other, in item 772.15, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F2

ISSUE:

Whether the MT-60 kitchen timer is properly classifiable as apparatus with watch or clock movements for measuring or indicating intervals of time or as households articles of rubber or plastic, other.

LAW AND ANALYSIS:

The timing function is mechanical and the device contains a geartrain which, at a predetermined time, activates the battery-operated sound and light signals. Such kitchen timers have consistently been held to be provided for as apparatus with watch or clock movement for measuring or indicating intervals of time. See 046185 (July 23, 1976); 067390 (August 7, 1981). The importer/protestant argues that the signalling function of the MT-60 is separate and distinct from the timing function, due to their unique character, thereby rendering the article "more than" a time measuring device. Specifically, it is contended that the electronic horn and blinking light are far removed from an ordinary ringing of a bell or "similar innocuous indication" that signals the end of a time interval.

The loudness of the electronic horn signal feature and the blinking light signal feature relate primarily and directly to the function of the subject article as a kitchen timer. They do not represent a separate function that alters the article's character or function as a kitchen timer. At most, the allegedly unique signal features only contribute to an improvement of the article's function as a kitchen timer, which does not render the MT-60 more than an apparatus for measuring or indicating intervals of time. Consequently, it is classifiable as such.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

554036

F3

HOLDING:

The MT-60 kitchen timer is properly classifiable under the tariff provision for apparatus with watch or clock movements for measuring, recording, or otherwise indicating intervals of time, other, in item 715.51, TSUS.

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to satisfy the notice requirements of section 174.30(a), Customs Regulations, as amended by T.D. 80-271.

Sincerely,

(Signed) RUSSELL J. ARNOLD

20 MAR 1986

CLA-2 CO:R:CV:V
554038 MBH

Leonard L. Rosenberg
Sandler and Travis, P.A.
444 Brickell Avenue
Miami, Florida 33131

Dear Mr. Rosenberg:

Your letter of February 10, 1986, on behalf of Allied Ethanol Ltd., requests a ruling, pursuant to Part 177, Customs Regulations, with respect to the eligibility for duty-free entry under the Caribbean Basin Recovery Act of motor fuel grade ethanol.

According to your submission, beverage grade ethanol will be imported into a beneficiary country. The beverage grade ethanol, which will be between 150 and 190 proof, may be the product of a CBI country or may be the product of a non-beneficiary country. The beverage grade ethanol will be processed into motor fuel grade ethanol in the CBI using a two stage distillation process. The first stage will distill the product to 190 proof using a standard distillation column. The second stage will process the ethanol through an azeotropic distillation column which will distill the ethanol to 199.5 proof. After distillation, the motor fuel grade ethanol will be denatured by adding gasoline which will be produced in a CBI country or the United States.

You first ask whether the motor fuel grade ethanol which has been produced in the beneficiary country constitutes a product or manufacture of that country for CBI purposes. It is the position of the Customs Service that the azeotropic distillation of beverage grade ethanol to fuel grade ethanol (199 proof) in a beneficiary country constitutes a substantial transformation which renders the ethanol a product of the beneficiary country for CBI purposes. See Headquarters Ruling 553849, dated November 19, 1985.

You next ask whether the cost of the gasoline used as a denaturant may be includable in the 35 percent value computation. Assuming that the gasoline is itself produced in the beneficiary country, its cost would be includable. At your request, we shall defer issuance of a ruling on the effect of using gasoline from the United States as a denaturant.

FS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Your third question is whether the cost of transportation of the beverage grade ethanol to the distillation plant, including customs brokerage and related costs for bringing the goods into the CBI country may be part of the cost of that component. If the beverage grade ethanol is produced in a beneficiary country, section 10.196 (c)(ii), Customs Regulations, permits inclusion of costs incurred in transporting the material to the manufacturer's plant when not included in the manufacturer's actual cost for the material.

Finally, you ask whether the actual cost of waste from the beverage grade ethanol, less recoverable "scrap" may be considered part of the 35 percent value content requirement. The actual cost of waste less the value of recoverable scrap may be included in the calculation of the 35 percent value content requirement only if the beverage ethanol is produced in a beneficiary country. See section 10.196(c)(iii), Customs Regulations

Mr. Pierre J. Quintana
Vice President
Cotraco, Inc.
Three Landmark Square, Suite 400
Stamford, Connecticut 06901

Dear Mr. Quintana:

In your letter of March 5, 1986, you inquired about the possible tariff treatment under item 806.30, Tariff Schedules of the United States (TSUS), for certain wire products made in Mexico from domestic wire rod.

This provision of law covers base metal articles processed abroad and then further processed when returned to this country. It does not apply to articles which are finished items when imported and ready for use by assembly or similar operations.

It appears from the description given in your letter that the upholstery spring wire, tire bead wire, and concrete wire are in a finished condition and ready for use without further operations except cutting to length.

On this basis, the imported wire would not be eligible for tariff treatment under item 806.30, TSUS.

Sincerely,

APR 7 1986

CLA-2 CO:R:CV:V
554056 EM
C145960

The Honorable
Mike DeWine
Member of Congress
Post Office Building
150 N. Limestone
Springfield, Ohio 45501

Dear Mr. DeWine:

Thank you for your letter of March 19, 1986, enclosing correspondence from Mr. Robert E. Schwartz of Eastern Coated Papers, Inc., Springfield, Ohio, concerning the status under the Tariff Schedules of the United States (TSUS), of certain cloth that is exported to Canada for the application of a coat of glue to one side, and returned to the United States for further processing.

Mr. Schwartz indicates that the gummed cloth has previously been returned to the United States on the basis of "value added" under tariff item 806.20, TSUS, but that the last shipment was based on the "full value" under item 807.00, TSUS. It is suggested that applying glue to one side of cloth is in fact an alteration and rates of duty should be assessed only on the "value added" under item 806.20, TSUS.

Item 806.20, TSUS, which provides for a duty to be assessed on the value of repairs or alterations made on articles exported for that purpose, does not appear to be applicable in the circumstances for the reason that the coating adds new characteristics to unfinished cloth material. Repairs or alterations can only be made to finished materials. The described foreign process is neither a repair nor an alteration but a step in the manufacturing process since the cloth is returned to the United States for further processing. In these circumstances, the foreign gluing would exceed the meaning of the term "alterations" and preclude the application of item 806.20, TSUS.

On the other hand, item 807.00, TSUS, applies to fabricated United States components that are designed to be fitted with other components in an assembly process, with no operations performed thereon except the attachment of the components to form the imported merchandise.

Allowances cannot be made under item 807.00, TSUS, in the absence of a genuine assembly of components as required by the statute. If the foreign operation consists of applying a coating of glue over exported cloth, without more, as stated in the

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ____

correspondence, there is no assembly of parts since coating exported cloth with glue does not result in an acceptable assembly of solid components.

As currently written, the tariff laws provide reduced duty or duty-free treatment for articles returned after having been exported from the United States only in specified circumstances, such as those set out above. The extension of such treatment to the described imported gummed cloth can be authorized only by Congressional legislation.

If we can furnish additional information or be of further assistance, please let us know.

Sincerely,

John Simpson

Mr. S. Richard Shostak
Stein Shostak Shostak & O'Hara
3580 Wilshire Boulevard, Suite 1240
Los Angeles, California 90010-2597

Dear Mr. Shostak:

You have requested a clarification of our ruling 071716 of September 5, 1984, with respect to the free entry of certain United States-made glass shelves imported together with foreign components for a stereo cabinet.

In that decision we concluded that the glass panels could not be separately classified under item 800.00, Tariff Schedules of the United States (TSUS), because the merchandise consisted of an unassembled single entity. To constructively segregate portions of the imported entity and accord a separate classification would be contrary to the provisions of General Headnote 10(h), TSUS, and inconsistent with the legislative intent in the Tariff Classification Study with respect to constructive segregation under Schedule 8, TSUS.

You contend tht the provisions of Schedule 8, TSUS, are not governed by the general rules of classification and that mere packaging of a domestic product with foreign merchandise should not preclude an exception provided for in that schedule. While Headnote 1, Schedule 8, TSUS, states that the rule of relative specificity in General Interpretative Rule 10(c), TSUS, may not apply to Schedule 8 provisions, this headnote does not affect General Interpretative Rule 10(h), TSUS, which provides that a tariff description covers an article whether or not finished or assembled. Accordingly, the unassembled stereo cabinet must be treated as a single entity and the artificial separation of the individual components for classification purposes would be illogical and inconsistent with Congressional intent.

In support of your claim that constructive segregation of an imported entity should be permitted, you cite The Carrington Co., United Geophysical Corp. v. United States, 70 Cust. Ct. 105 (1973); aff'd, 61 CCPA 77, C.A.D. 1126 (1974). In that case it was held that a tracked motor vehicle imported with a drill, assembled or unassembled, was classifiable as an entirety under the provision for motor vehicles specially constructed to perform special services in item 692.16, TSUS. While the court held that the fact that the drill portion had been admitted free under either item 800.00 or 807.00, did not permit the imported unit to be split up for classification purposes, it did not pass upon the free entry question involved in the subject case. Accordingly, we

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F10

do not consider the Carrington case to be controlling in cases involving constructive segregation in order to obtain free entry under item 800.00, TSUS.

More in point is our ruling of December 17, 1985, 553920 EM, copy enclosed, which involved the classification of plastic sedimentation racks of United States origin imported with 200 glass tubes of foreign origin. We held that the American origin of the racks was merged in the imported entity and, since there could be no separation of components making up the entirety, the item 800.00, TSUS, exemption for the domestic racks was foreclosed.

In view of the foregoing, we remain of the opinion that the ruling in our decision of September 5, 1984, holding glass shelves of United States manufacture could not be constructively segregated for classification purposes from the remainder of the stereo cabinets, is correct.

Sincerely,

(Signed) RUSSELL ARNOLD

F13

PUBLIC ... ED TO THE

19 FEB 1981

ENF 4-02.2 CO:R:E:C
651993 GOB
X Ref. 652315

Area Director of Customs
New York, New York 10048

Dear Sir:

A letter from your office dated December 20, 1979, forwarded a petition submitted by counsel on behalf of [redacted], requesting relief from a claim for monetary penalty of $2,195,914 assessed against [redacted] for violation of title 19, United States Code, section 1592, as amended by Public Law 95-410 (Customs Procedural Reform and Simplification Act of 1978). New York Seaport Area Case No. 79-1001-52713 is involved.

The liability was incurred because [redacted] entered needle roller wire into the commerce of the United States under cover of 105 entries filed between January 1972 and October 1976, by means of false invoices. The invoices are alleged to be false in that they did not reflect the true value of the imported merchandise and in that certain additional payments made for currency fluctuations were not declared. There is a recomputed actual loss of revenue of $6,441.12 and a recomputed potential loss of revenue of $20,437.48, for a total loss of revenue of $26,878.60. A tentative determination of fraud has been made with respect to the degree of culpability.

[redacted] claims that [redacted] sold and shipped the merchandise at issue to it, [redacted] in New York; and that it in turn sold and shipped the product to [redacted] the ultimate purchaser. [redacted] states that it negotiated the receipt of the merchandise, including Customs clearance and duty details, with [redacted] [redacted] maintains that it negotiated with [redacted] for its business, including specifications, quantities, prices and payment conditions. [redacted] contends that [redacted] as its customer, chose to have it, [redacted] handle the importation itself, including the risks associated therewith, Customs entry and the payment of duty. [redacted] claims that there were no commercial transactions between [redacted] and [redacted]

[redacted] claims that the proper basis of appraisement is export value, as represented by the invoice price from [redacted] to [redacted] It contends that it was not a selling agent of [redacted] and that the transactions between it and [redacted] were bona fide sales.

With respect to Customs allegation regarding the failure to declare payments for currency fluctuations, [redacted] states that, during the period from November 1974 through April 1975, when [redacted] was invoiced by [redacted]

651993

F14

PUBLIC ... ED TO THE

and [redacted] was invoiced by [redacted] provision was made for the adjustment of price contingent upon the fluctuation of the rate of exchange of the two currencies up to the date of payment. [redacted] contends that these additional payments, which were uncertain as to their existence or amounts at the time of entry, had nothing to do with the price of the merchandise, but related to the credit feature of the transactions.

[redacted] denies that it ever engaged in false invoicing and further denies that it would have ever committed an act of fraud with the U.S. Customs Service or with any governmental or private entity or person.

[redacted] claims that the proper basis for appraisement is export value as represented by invoice price from [redacted] to [redacted] and that the transactions between it and [redacted] were bona fide sales have been examined by the Classification and Value Division at Customs Headquarters.

The export value of imported merchandise as defined in section 402(b), Tariff Act of 1930, as amended, is the price at the time of exportation to the United States of the merchandise undergoing appraisement, at which such or similar merchandise is freely sold or, in the absence of sales, offered for sale in the principal markets of the country of exportation... (Emphasis supplied.) The term "freely sold," as defined in section 402(f)(1), means sold or, in the absence of sales, offered for sale to one or more selected purchasers at wholesale at a price which fairly reflects the market value of the merchandise. (Emphasis supplied.)

Before adopting the price between [redacted] and [redacted] as establishing statutory export value, it must be determined whether the transactions between these related parties constitute sales within the meaning of section 402(b), and, if the transactions constitute sales, whether the price fairly reflects the market value of the merchandise within the meaning of section 402(f)(1)(b). (We note that in this particular case the evidence does not indicate sales of such or similar merchandise for exportation to the United States.)

In J.L. Wood v. United States, 62 C.C.P.A. 25, C.A.D. 1139 (1974), the court held that for the purposes of section 402(b) and section 402(f), the term "sale" should be given its ordinary meaning, i.e., a transfer of property from one party to another for a consideration.

In this regard, review of the evidence in the instant case indicates that [redacted] is a viable corporate entity, separate and distinct from [redacted]. The record also reflects that although the imported wire was shipped directly to [redacted] from [redacted], [redacted] was the seller of the merchandise as indicated on the commercial invoices. In addition, it appears that [redacted] reimbursed [redacted] for the imported items, and that [redacted]

65199

61

contracted with and made payment to [redacted]. In short, we are satisfied that the transactions between [redacted] and [redacted] constitute bona fide sales for Customs purposes.

We must now consider whether the purchase price between these related parties, [redacted] and [redacted] fairly reflects the market value within the meaning of section 402(f)(1)(b). In this regard, the question arises as to what evidence should be viewed as acceptable or determinative in arriving at the conclusion that a given transaction price between related parties does or does not fairly reflect the market value of the imported merchandise. There is no hard and fast rule as to the proof needed to establish that a price to a selected purchaser fairly reflects market value. Factors which have been considered by the courts are the bona fides of the transaction, whether or not the transaction was at arm's length, the practices of others engaged in the same class of trade, whether there is evidence sufficiently accounting for any differences in price or costs, and sales to unrelated customers in the United States at comparable prices. On the other hand, references to cost of production, home market sales and third country sales have been held to be improper in establishing statutory export value. See D. H. Baldwin Co and Koeller Strauss Co. v. United States 65 C.C.P.A. 67, C.A.D. 1208 (1978).

In this case, we find that the evidence of record regarding the circumstances of sale and the relative markups of [redacted] and [redacted] is sufficient to establish that the prices between those two parties fairly reflect the market value of the subject merchandise. [redacted] has provided representative invoices and trade acceptences issued by [redacted] as well as representative invoices and trade acceptences issued by [redacted] to [redacted]. In accordance with T.D. 78-344, we find that the sale transactions were at arm's length. We note that the evidence in the file does not indicate that the prices charged by [redacted] were arrived at by collusion between it and [redacted].

Based upon the determinations that the transactions between [redacted] and [redacted] constitute bona fide sales for Customs purposes and that the prices between [redacted] and [redacted] fairly reflect the market value of the subject merchandise, we find that the proper basis for appraisement is export value as represented by the invoice price from [redacted] to [redacted]. Accordingly, we find the allegation of the Notice of Penalty that the invoices did not reflect the true value of the imported merchandise to be unsubstantiated.

The issue of the non-declaration of the payments made for currency fluctuations has also been examined by the Classification and Value Division at Customs Headquarters. It has been determined that the currency fluctuation payments have no bearing on the export transfer price and that they are not includable in the dutiable value of the imported merchandise.

651993

[redacted]

Accordingly, we find that the failure to declare the currency fluctuation payments does not constitute a material omission within the meaning of title 19, United States Code, section 1592, and that Customs allegation of a violation in that regard is not supported.

Based upon our findings, the claim for monetary penalty is cancelled. Please advise counsel for [redacted] of this decision and enclose a copy of this letter with your notification.

Sincerely,
(Signed) Anthony L. Piazza

DEPARTMENT OF THE TREASURY U S CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

26 MAR 1981

ENF 4-02.2 CO:R:E:C
652363 HL

652363

District Director of Customs
San Francisco, California 94126

Dear Sir:

Your memorandum of September 2, 1980, forwards a petition filed by counsel on behalf of [redacted] and [redacted] in connection with San Francisco District Case No. 79-2809-51042. The petition requests relief from a claim for forfeiture value of $2,986,653.00 assessed jointly and severally against [redacted] and [redacted] for violation of 19 U.S.C. 1592.

Twenty-one consumption entries filed between October 1974 and March 1975 were accompanied by invoices which provided false value breakdowns of the component materials of arctic clothing manufactured in Taiwan by [redacted] for the United States importer [redacted]); the invoices undervalued the cost of materials provided free of charge to [redacted] by [redacted] (Nomex fabric, Nomex thread, and fur strips), and failed to include the cost of assists (pattern development costs). The false value breakdowns of component material altered the classification of the garments by manipulating component material of chief value. The actual loss of revenue was $347,392.41 and the potential loss was $18,937.06 (total: $366,329.47).

The false invoices were prepared by [redacted] with values supplied by the importer, [redacted], which is now bankrupt. Although garment components were supplied free of charge, [redacted] and [redacted] agreed to assign certain values to the components inasmuch as Taiwanese law restricted the shipment of components to Taiwan on a consignment basis. The values assigned to the components had a two-fold purpose. The values would ostensibly be the basis of a price charged for the components in order to circumvent Taiwanese law for [redacted] benefit; and the same values would also be presented to U. S. Customs in such a way as to incur a lower rate of duty when the assembled garments were imported by [redacted]

[redacted] claims that it did not possess actual knowledge that the values supplied by [redacted] were inaccurate. [redacted] also contends that Customs could not reasonably expect [redacted] to be on notice that the components were undervalued. We agree. No evidence in the record suggests that [redacted] actually knew the values were false. Furthermore, we cannot impute to [redacted] in Taiwan knowledge of the cost of particular components in the United States, knowledge which could have provided [redacted] with a basis for challenging the values as supplied.

ED TO THE

G4

652363

The notice of penalty also refers to the failure to declare the cost of assists, i.e., pattern development costs. Special Customs invoices (CF 5515) in the record which are signed by [redacted] do not contain a check mark in either the box marked "yes" or "no" in answer to the question whether assists were provided. It has been Customs policy to accept special Customs invoices with the question on assists left unanswered. C.S.D. 79-69. Consequently, we have declined to find a violation of 19 U.S.C. 1592 where assists have been provided to the manufacturer who does not answer the question on assists on CF 5515.

The notice of penalty also names [redacted] related to [redacted] insofar as there is a common shareholder of more than 5 percent of the stock of each company. [redacted] however, was incorporated in February 1978, nearly three years after the last entry in question was made. The record offers no evidence that [redacted] is related to the subject transactions in any way.

In view of the foregoing, the claim for forfeiture value against both [redacted] and [redacted] is cancelled. Please notify the petitioners, through counsel, of our decision in this case, enclosing a copy with your letter of notification.

Sincerely,

Salvatore E. Caramagno

Donald W. Lewis

DEPARTMENT OF THE TREASURY U S CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

14 DEC 1982

653149

ENF 4-02.2 CO:R:E:C
653149 MPH

Dear Sir:

Your memorandum of October 21, 1982, forwarded a petition submitted by counsel on behalf of [redacted] (petitioner), seeking relief from a claim for a monetary penalty of $63,950.08, assessed pursuant to title 19, United States Code, section 1592, in Newark Case No. 81-4601-50698.

The liability was incurred because petitioner entered twenty-three drums of dillweed oil into the commerce of the United States under cover of an entry dated January 29, 1981, by means of false statements on invoices submitted to the Customs Service. The invoices were false in that they stated that the dillweed oil was a product of Italy when in fact the merchandise was a product of Bulgaria. As a result of petitioner's actions, the United States has suffered an actual loss of revenue of $15,987.52.

Petitioner concedes the falsity of the invoices. Petitioner claims, however, that at the time it filed the documents associated with the instant entry, it reasonably believed that the merchandise was a product of Italy. Accordingly, petitioner argues that it exercised due care in entering the merchandise and that it did not violate section 1592.

Alternatively, petitioner argues that the false statement as to country of origin was the result of a clerical error or mistake of fact not amounting to a pattern of negligent conduct within the meaning of title 19, United States Code, section 1592(a)(2).

Petitioner presents a rather detailed recital of the commercial transaction which gave rise to the instant importation. Because of its obvious relevance to the question of petitioner's culpability, we will summarize the background as presented by petitioner.

Petitioner purchased the instant merchandise from [redacted], manufacturers and dealers in essential oils and related products. [redacted] received twenty-six drums of Italian dillweed oil on September 15, 1980. This merchandise was offered to petitioner through [redacted]. United States representatives of [redacted] Samples of the dillweed oil were forwarded to petitioner for testing. Negotiations between petitioner and [redacted] led to a purchase and sale agreement which was executed on December 9, 1980, specifying that the product was to be shipped from Italy.

66

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

At the time of the arrival of the merchandise, petitioner had not received either the respective Special Customs Invoice or the commercial invoice. Entry by petitioner's broker was made via a pro forma invoice. The declaration of Italy as the country of origin was in conformity with petitioner's understanding in negotiations with [redacted]

653149

To buttress its contention that it exercised due care, petitioner offers an explanation for the false statements on the entry documents.

According to a letter submitted by [redacted] its freight forwarder mistakenly shipped Bulgarian dillweed oil in place of the Italian oil which petitioner had ordered. The oil which was originally intended for petitioner was mistakenly shipped to another customer in Zurich.

As your memorandum suggests, the record does not establish that petitioner had actual knowledge of the country of origin of the merchandise. It remains to consider whether petitioner's actions constitute negligence.

Title 19, United States Code, section 1592(c)(4) states that if the penalty claim is based on negligence, the Government's burden is simply to show that act or omission constituting the violation and the alleged violator shall have the burden of proof that the act or omission did not occur as a result of negligence.

Petitioner has presented a reasoned explanation for the falsity of the entry documents supported by statements from the various parties. The record does not contain any evidence inconsistent with petitioner's version of the events. Accordingly, petitioner has satisfied its burden of proof.

Based upon our consideration of the record, the monetary penalty is cancelled.

Please inform petitioner, through counsel, of this decision and enclose a copy of this letter with your notification.

Sincerely,

(Signed) Anthony L. Piazza

DEPARTMENT OF THE TREASURY · U. S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 160 (11-15-73)

06 JAN 1983

ENF 4-02.2 CO:R:E:C
653172 MBH

653172

Dear Sir:

Your memorandum of April 1, 1981, forwarded a petition submitted by counsel on behalf of [redacted] seeking relief from a claim for a monetary penalty of $768,872, assessed pursuant to title 19, United States Code, section 1592, in Seattle District Case No. 81-3004-50022.

The liability was incurred in connection with the entry of certain lighting fixtures into the commerce of the United States under cover of 131 entries filed during the period from June 30, 1976, to September 29, 1980. It is alleged that the entries contained false statements. As recited in the penalty notice of December 16, 1980, the statements were allegedly false in that

(1) The consignee, [redacted] ceased to be a viable entity during 1975 and exists in name only.

(2) The unit prices failed to reflect the increases in actual costs to [redacted] or increases in the United States net price.

(3) Certain components declared as United States components under TSUS Code 807.00 were actually of Mexican origin.

In addition, the record indicates that certain components entered under item 807 were advanced in value or improved in condition by means other than assembly.

The total loss of revenue is reported to be $192,218.12. Of this amount, all but $3,817.48 is allegedly attributable to the undervaluation violation.

Because of the nature of the undervaluation violation, a discussion of the import transactions which gave rise to this penalty case is appropriate.

[redacted] is a company incorporated under the laws of British Columbia, Canada. In May 1970, a wholly owned American subsidiary, [redacted]), was formed and acted as importer of record. By 1972, [redacted] was used as an assembly facility. By 1975, however, the assembly operation was discontinued. Subsequent importations of lighting fixtures were in assembled condition.

According to the investigative record, with respect to the instant transactions, orders from American purchasers were solicited by sales representatives who were paid on a commission basis. These orders were sent to a post office box in Seattle where they were periodically collected and delivered to [redacted] The assembled fixtures were shipped by [redacted] via its terminal in Seattle and were reshipped directly to the customers. [redacted] was the importer of record for the subject merchandise.

68

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Invoices bearing the name "[redacted]" were prepared by personnel of [redacted]. The invoices were forwarded to a factoring company in Canada which credited [redacted] on its bank accounts.

According to your memorandum, the basis for the undervaluation violation is that the true commercial transaction was a sale from [redacted] to its American customers rather than from [redacted] to [redacted]. Therefore, you reason that the entered value should have reflected the price at which the merchandise was sold to the American customers.

Petitioner claims that [redacted] was a viable legal entity during the relevant period, responsible for paying all charges incurred in the United States, that title passed upon shipment to [redacted] and that its use of the transfer price for the entered value was proper.

It is clear that the existence of the instant violation and the calculation of the loss of revenue depend upon whether a bona fide sale occurred between the Canadian parent and the American subsidiary. If a sale is deemed to have taken place, use of the purchase price cannot be regarded as violative conduct. See title 19 United States Code, section 1481(5).

The "sale" issue was referred to Headquarters Value Branch which has analyzed the instant case under the applicable legal standard J. L. Wood v. United States, 62 CCPA 25, CAD 1139 (1974).* In pertinent part, the Value Branch concluded as follows:

> "The facts in the instant case closely parallel the facts in the J. L. Wood case in nearly all respects. In fact, it is our view that of the few pertinent differences which do exist between the fact patterns of the two cases, none are of sufficient importance to justify our reaching a conclusion at variance with the decision of the court in J. L. Wood in regard to whether there were actual sales. Consequently, after a careful review of the evidence in this case, we conclude, in the light of the facts and holding in J. L. Wood, that the subsidiary was a viable corporate entity during the period in question and that the transactions between the parent and subsidiary represented bona fide sales."

In our view, the foregoing reasoning is dispositive of the valuation issues. It remains to consider the 807 violation.

*In J.L. Wood, the court held that the related nature of the companies did not preclude a conclusion that a bona fide sale had taken place.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

653172

Petitioner acknowledges that some of the components claimed as American under item 807.00 TSUS were in fact products of Mexico. Petitioner explains that since the components were imported from the United States, they were regarded by petitioner as being American. Petitioner also states that in 1978 it was told by an import specialist and a special agent that certain components were not products of the United States for Customs purposes. From then on, petitioner avers that it tried to avoid claiming free entry for the Mexican components. Petitioner asserts that the amount of duties on the Mexican components is not large.

Your transmittal of November 24, 1982, states that the loss of revenue attributable to the false claims under item 807.00 is $3,817.48. In our view, petitioner, aware that some of its components were of Mexican origin, had an obligation as a reasonable and prudent importer to inquire whether these components were eligible under item 807.00. Petitioner's initial failure to ascertain its obligations under the statute and subsequent failure to make certain that no false claims were made constitute negligence in violation of title 19, United States Code, section 1592.

In view of these findings and based upon our consideration of the record, the monetary penalty is mitigated to $7,634.

Please inform petitioner, through counsel, of this decision, informing him that compliance with its terms must be effected by February 7, 1983. Enclose a copy of this letter with your notification.

Sincerely,

(Signed)

AREA DIRECTOR OF CUSTOMS
NEW YORK SEAPORT
NEW YORK, NEW YORK

(PRIORITY) RE: YOUR MEMORANDUM OF DECEMBER 14, 1982, FORWARDING PETITION OF [redacted] FOR RELIEF OF CLAIM FOR DOMESTIC VALUE FOR $174,389, ASSESSED FOR VIOLATIONS OF 19 U.S.C. 1592 IN YOUR CASE NO. 78-1001-52040.

THE CLAIM AROSE BECAUSE PETITIONER ENTERED OR CAUSED TO BE ENTERED LADIES' VINYL GARMENTS BY MEANS OF TWO FALSE CONSUMPTION ENTRIES (C.E.) FILED IN THE NEW YORK SEAPORT AREA. THE ENTRIES, C.E. NOS. 237637 AND 323354, DATED OCTOBER 31, 1973, AND JANUARY 21, 1974, RESPECTIVELY, WERE FALSE IN THAT THEY STATED A PURCHASE PRICE LOWER THAN THE ACTUAL PURCHASE PRICE. A POTENTIAL LOSS OF REVENUE OF $3,476.25 RESULTED.

COUNSEL DENIES THE EXISTENCE OF A VIOLATION. COUNSEL CLAIMS THE DECLARED VALUES PROPERLY REPRESENTED THE SALE PRICE FROM THE EXPORTER, [redacted], TO ITS PARTIALLY OWNED SUBSIDIARY, [redacted]. [redacted] THEN ALLEGEDLY RESOLD THE GARMENTS TO PETITIONER WHICH MADE ENTRY AS IMPORTER OF RECORD. THE RESALE PRICES WERE NOT DECLARED ON THE ENTRY, BUT WERE DISCLOSED BY PETITIONER ON MAY 20, 1974, IN ITS RESPONSES TO TWO RELATIONSHIP QUESTIONNAIRES (II-RC-270) SENT BY CUSTOMS.

653189

611

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

BASED ON PETITIONER'S ADMISSIONS IN ITS RESPONSES TO THE QUESTIONNAIRES; A SALES CONTRACT DIRECTLY BETWEEN [redacted] AND PETITIONER, WHICH HAS PRICES, QUANTITIES, AND STYLES THAT CORRESPOND TO THE ALLEGED RESALE INVOICE FOR TWO OF THE GARMENT STYLES ON ENTRY 323354; AND THE ABSENCE OF COMMERCIAL INVOICES, RECORDS OF PAYMENT, OR OTHER EVIDENCE THAT A SALE BETWEEN [redacted] OCCURRED AT THE PRICES DECLARED; WE FIND THAT [redacted] ACTED AS A SALES AGENT IN THESE TRANSACTIONS. THE SALES CONTRACT SHOWS THAT PETITIONER HAD ACTUAL KNOWLEDGE OF THE AGENT STATUS OF [redacted] AND THE ACTUAL PURCHASE PRICES.

WE CONCLUDE THAT PETITIONER FALSELY DECLARED LOWER PURCHASE PRICES THAN WERE ACTUALLY PAID IN VIOLATION OF 19 U.S.C. 1592 AND THAT THE VIOLATION RESULTED FROM GROSS NEGLIGENCE. WE ALSO CONCLUDE THAT PETITIONER'S RESPONSES TO THE RELATIONSHIP QUESTIONNAIRES CONSTITUTED A VOLUNTARY DISCLOSURE OF THE VIOLATIONS. OUR POLICY HAS BEEN THAT A PARTY MUST TENDER AN ACTUAL LOSS OF REVENUE TO OBTAIN VOLUNTARY DISCLOSURE TREATMENT. THIS POLICY HAS BEEN CONTINUED IN THE CURRENT PRIOR DISCLOSURE REGULATIONS AND IS STATED IN SECTION 162.74(A), CUSTOMS REGULATIONS. SINCE THE LOSS OF REVENUE IN THIS CASE IS ALL POTENTIAL, NO TENDER IS REQUIRED.

IN CONSIDERATION OF THE VOLUNTARY DISCLOSURE, PETITIONER'S PRIOR GOOD RECORD, AND THE SMALL LOSS OF REVENUE COMPARED TO THE FORFEITURE VALUE OF THE MERCHANDISE, WE MITIGATE THE CLAIM FOR FORFEITURE VALUE FROM $174,389 TO $1,738.13, PROVIDED THAT $3,476.25 IS COLLECTED UPON LIQUIDATION OF THE ENTRIES.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

653/89

612

[redacted]

PLEASE ADVISE PETITIONER OF THIS DECISION BY TELEPHONE. PAYMENT OF THE MITIGATED AMOUNT WILL BE DEEMED COMPLIANCE. IF PETITIONER DOES NOT COMPLY WITH THE DECISION BY JANUARY 19, 1983, THE CASE SHOULD BE REFERRED TO THE DEPARTMENT OF JUSTICE FOR APPROPRIATE ACTION. PRELIMINARY STEPS SHOULD BE TAKEN TO PREPARE THE CASE FOR REFERRAL IN THE EVENT THAT PETITIONER DOES NOT COMPLY.

BARBARA GRAHAM

8317

652698/652699

DISTRICT DIRECTOR OF CUSTOMS
BOSTON, MASSACHUSETTS

YOUR MEMORANDA, DATED MAY 26, 1981, FORWARDED THE PETITIONS OF FADED GLORY BY [redacted] AND [redacted] REQUESTING RELIEF RELIEF FROM MONETARY PENALTY CLAIMS EACH IN THE AMOUNT OF $77,787,784 ASSESSED FOR VIOLATION OF 19 U.S.C. 1592, AS AMENDED BY P.L. 95-410 (CUSTOMS PROCEDURAL REFORM AND SIMPLIFICATION ACT OF 1978). (BOSTON DISTRICT CASE NOS. 81-0401-50022/1 AND 81-0401-50022/2).

THE CLAIMS WERE ASSESSED BECAUSE PETITIONERS FILED OR CAUSED TO BE FILLD ENTRIES DATED FROM JANUARY 12, 1976, THROUGH AUGUST 31, 1978, WITHOUT FULLY REPORTING AND INCLUDING WITHIN DUTIABLE VALUE OF THE ENTERED MERCHANDISE, A QUOTA CHARGE OF $3,493,689 WHICH WAS INVOICED AND PAID SEPARATELY. AS A RESULT, THERE IS A REPORTED POTENTIAL LOSS OF REVENUE OF $84,064 AND AN ACTUAL LOSS OF REVENUE OF $596,211 FOR A

A3

652698/652699

TOTAL OF $680,275. THE CLAIM FOR $77,787,784 ASSESSED AGAINST EACH PETITIONER WAS BASED ON THE PRELIMINARY DETERMINATION THAT THE VIOLATIONS WERE THE RESULT OF FRAUD.

PETITIONERS CLAIM THAT THEY HAVE BEEN DENIED THEIR STATUTORY RIGHTS TO MAKE A MEANINGFUL RESPONSE TO CUSTOMS ALLEGATIONS UNDER 19 U.S.C. 1618 AND HAVE BEEN DENIED THEIR STATUTORY RIGHTS TO BE INFORMED OF THE SPECIFIC CIRCUMSTANCES LEADING TO THE ALLEGED VIOLATIONS UNDER 19 U.S.C. 1592 IN THAT THE PREPENALTY NOTICE CONTAINS NO DETAILS AND NO ALLEGATIONS OF MATERIAL FACTS WITH REGARD TO THE ALLEGED VIOLATIONS.

CONTRARY TO PETITIONERS' ALLEGATIONS, WE FIND THAT THE NOTICES ISSUED SET FORTH THE NECESSARY DETAILS AND FACTS WHICH ARE REQUIRED UNDER SECTION 1592(b) AND PROVIDE PETITIONERS WITH SUFFICIENT INFORMATION TO PREPARE A MEANINGFUL RESPONSE.

A4

652698/652699

PETITIONERS CLAIM THAT THEY WERE NOT REQUIRED TO DISCLOSE QUOTA CHARGES ON THE ENTRY PAPERS IF THEY HAD REASONABLE CAUSE TO BELIEVE THAT THE CHARGES WERE NOT DUTIABLE. PETITIONERS ASSERT THAT 19 U.S.C. 1481 DOES NOT CONTAIN A REQUIREMENT THAT QUOTA CHARGES BE LISTED ON THE INVOICES. PETITIONERS CONTEND THAT BECAUSE QUOTA CHARGES HAVE BEEN HELD TO BE NONDUTIABLE CHARGES IT IS QUITE REASONABLE FOR AN IMPORTER TO ATTACH NO SIGNIFICANCE TO THE INCURRENCE OF QUOTA CHARGES. PETITIONERS FURTHER CLAIM THAT IT IS NOT INCUMBENT UPON THE IMPORTER TO INCLUDE A CHARGE OF WHICH CUSTOMS IS APPRISED AND WHICH SAID IMPORTER BELIEVES TO BE NONDUTIABLE; THAT THE IMPORTER WAS NOT INFORMED THAT THE QUOTA CHARGES WERE DUTIABLE AND THAT THE IMPORTER IS NOT REQUIRED TO DETERMINE THE DUTIABILITY OF THE MERCHANDISE.

WE DISAGREE WITH PETITIONERS' CONTENTION THAT THEY WERE NOT REQUIRED TO REPORT THE QUOTA CHARGES ON THE ENTRY PAPERS. SECTION 1481(3) REQUIRES THAT INVOICES SET FORTH ALL CHARGES UPON THE MERCHANDISE. THE STATUTE DOES NOT DISTINGUISH BETWEEN DUTIABLE OR NONDUTIABLE

AS

652698/652699

CHARGES. THE EVIDENCE IN THE FILE SHOWS THAT QUOTA CHARGES WERE CHARGED AND SEPARATELY BILLED TO [redacted] AND THAT THESE CHARGES WERE NOT SET FORTH ON THE INVOICES PRESENTED TO CUSTOMS.

WE AGREE WITH PETITIONERS THAT IT IS NOT THE OBLIGATION OF THE IMPORTER TO DETERMINE THE DUTIABILITY OF THE MERCHANDISE; THE IMPORTER'S OBLIGATION IS TO DISCLOSE THE TRANSACTIONS PURSUANT TO THE STATUTE AND THE REGULATIONS. IN THIS CASE PETITIONERS FAILED TO DISCLOSE THE CHARGES TO CUSTOMS CLAIMING THAT THE REASON FOR THIS FAILURE WAS BECAUSE OF THEIR BELIEF THAT THE CHARGES WERE NOT DUTIABLE. PETITIONERS APPARENTLY TOOK UPON THEMSELVES THE OBLIGATION TO DETERMINE THE DUTIABILITY OF THE CHARGES, AN OBLIGATION WHICH THEY CORRECTLY STATE IS THAT OF CUSTOMS. IT IS INCUMBENT UPON THE IMPORTER TO DISCLOSE THE CHARGES TO CUSTOMS SO THAT CUSTOMS MAY MAKE THE DETERMINATION AS TO THEIR DUTIABILITY. CUSTOMS CANNOT INFORM THE IMPORTER THAT THE CHARGES ARE DUTIABLE IF CUSTOMS IS UNAWARE OF THEIR EXISTENCE.

PETITIONERS CLAIM THAT CUSTOMS CANNOT IMPUTE FRAUD TO THE IMPORTER WHEN CUSTOMS WAS AWARE OF THE QUOTA CHARGES. HOWEVER, PETITIONERS FAIL TO PROVIDE ANY DETAILS REGARDING THIS DISCLOSURE. THE FILE REFLECTS THAT CUSTOMS WAS NOT APPRISED OF THE SEPARATE QUOTA CHARGES UNTIL AUGUST 1978 SUBSEQUENT TO THE ENTRIES INVOLVED IN THIS CASE. PETITIONERS ALLUDE TO CORRESPONDENCE WITH CUSTOMS WHICH MENTIONS QUOTA CHARGES AND CITES CORRESPONDENCE BETWEEN [redacted] IN 1976. HOWEVER, THE CORRESPONDENCE INCLUDED IN THE FILE RELATES TO AN INQUIRY FROM THE IMPORT SPECIALIST RELATING TO AN ENTRY OF MERCHANDISE FROM TAIWAN. IN A LETTER, DATED FEBRUARY 12, 1976, [redacted] ADMITTED THAT AN ADDITIONAL 10 PERCENT FOR HANDLING EXPENSES WAS PAID. THIS CORRESPONDENCE RELATES TO CHARGES UPON MERCHANDISE FROM TAIWAN AND DOES NOT REFER TO QUOTA CHARGES ON MERCHANDISE FROM HONG KONG WHICH ARE THE SUBJECT OF THE INSTANT CASE. WHAT IS RELEVANT TO THE CASE AT HAND IS THE CF 29 WHICH THE IMPORT SPECIALIST SENT AFTER RECEIPT

[illegible] TO THE

652698/652699

A1

652698/652699

OF THE LETTER FROM [redacted] THE CF 29 CONTAINED THE FOLLOWING COMMENT AND INSTRUCTIONS:

> WHY WASN'T THIS INVOICE PRESENTED TO CUSTOMS AT TIME OF ENTRY? OUR INVOICING REQUIREMENTS MAKE SUBMISSION OF ALL DOCUMENTS RELATING TO IMPORTED MERCHANDISE MANDATORY. WE NEED TO KNOW ALL SUMS THAT YOU REMIT AND THEN WILL MAKE THE DECISION AS TO THEIR DUTIABILITY. WITHOUT THIS INVOICE, WE DID NOT HAVE FULL DETAILS REGARDING THIS TRANSACTION. WE TRUST THAT THIS IS AN ISOLATED INSTANCE.

THUS [redacted] WAS CLEARLY ADVISED ON FEBRUARY 24, 1976, THAT IT WAS THE IMPORTER'S RESPONSIBILITY TO DISCLOSE ALL COSTS AT TIME OF ENTRY. EVEN WITH THE WRITTEN INSTRUCTION, PETITIONERS FAILED TO DISCLOSE THE QUOTA CHARGES WITH RESPECT TO THE HONG KONG CONSUMPTION ENTRIES.

A8

652698/652699

THE EVIDENCE SHOWS THAT PETITIONERS WERE AWARE OF THE QUOTA CHARGES WHICH WERE SEPARATELY INVOICED ON THE SUBJECT MERCHANDISE AND WERE AWARE OF THEIR OBLIGATION TO REPORT SUCH CHARGES TO CUSTOMS. BASED ON A REVIEW OF THE EVIDENCE OF RECORD, WE FIND THAT THE FAILURE TO REPORT THE QUOTA CHARGES ON THE ENTRY PAPERS IS ATTRIBUTABLE TO GROSS NEGLIGENCE ON THE PART OF THE PETITIONERS IN THAT THEY ACTED WITH WANTON DISREGARD FOR THE RELEVANT FACTS AND INDIFFERENCE OR DISREGARD FOR THEIR OBLIGATIONS UNDER THE STATUTE.

PETITIONER [redacted] CLAIMS THAT HE HAD NO RESPONSIBILITY FOR OR KNOWLEDGE OF NOR DID HE PARTICIPATE IN CUSTOMS MATTERS. THE EVIDENCE IN THE FILE SHOWS THAT [redacted] WHO WAS A CORPORATE OFFICER DURING THE TIME IN QUESTION HAD PERSONALLY ORDERED MERCHANDISE FROM THE FOREIGN SUPPLIER. [redacted] HAD FULL KNOWLEDGE OF THE TRANSACTIONS AS WELL AS CUSTOMS REQUIREMENTS. HE WAS ACTIVELY INVOLVED IN THE SUBJECT TRANSACTIONS, WAS AWARE OF ALL COSTS INCURRED INCLUDING THE SEPARATELY INVOICED QUOTA CHARGES AND FAILED

[illegible] TO THE

A9

652698/652699

TO REPORT SAME TO CUSTOMS. ACCORDINGLY, WE FIND THAT [redacted] IS PERSONALLY LIABLE UNDER THE STATUTE AND HIS FAILURE TO REPORT QUOTA CHARGES IS ATTRIBUTABLE TO GROSS NEGLIGENCE.

PETITIONERS CLAIM THAT THE QUOTA CHARGES ARE NOT DUTIABLE. PETITIONERS CITE THE DECISION OF UNITED STATES V. GETZ BROS. & CO. ET AL., 55 CCPA 11, C.A.D. (1967) WHERE THE COURT FOUND THAT THE QUOTA CHARGES WERE NOT DUTIABLE. CHARGES WHICH WERE INCLUDED AS PART OF THE TOTAL INVOICE PRICE AND NOT DISTINCTLY SEGREGATED, BEING A MERE ADDITION TO THE PROFIT OF THE MANUFACTURERS, WERE DUTIABLE. PETITIONERS CLAIM HERE SPECIFIC AMOUNTS ARE CHARGED FOR THE QUOTA ALLOCATIONS USED TO EXPORT THE PRODUCTS PURCHASED BY [redacted]

THE EVIDENCE IN THE FILE SHOWS THAT THE SELLER, [redacted] HAD FREE QUOTA AS WELL AS PURCHASED QUOTA. IT SOLD THE MERCHANDISE AT A UNIFORM RATE WHETHER FREE OR PURCHASED QUOTA WAS USED. THE AMOUNT

A10

652698/652699

SAVED USING ITS OWN QUOTA CONSTITUTES PART OF PROFIT OF THE MANUFACTURER AND THE ONLY FREELY OFFERED PRICE WAS THE PRICE INCLUDING THE UNIFORM RATE FOR QUOTA. ACCORDINGLY, WE FIND THAT THE QUOTA CHARGES ARE DUTIABLE.

BECAUSE THE STATUTE OF LIMITATIONS HAS ALREADY RUN WITH RESPECT TO SEVERAL ENTRIES CITED IN THE NOTICES, THE LOSS OF REVENUE FOR DETERMINING THE MITIGATED AMOUNTS HAS BEEN REDUCED AS FOLLOWS: ACTUAL LOSS OF REVENUE $548,708; THE POTENTIAL LOSS OF REVENUE THE SAME AT $84,064, THE TOTAL LOSS $632,772. UNDER AUTHORITY OF 1592(d) CUSTOMS IS CONDITIONING MITIGATION UPON DEPOSIT OF THE TOTAL AMOUNT OF ACTUAL LOSS OF REVENUE AS ORIGINALLY CALCULATED.

BASED ON A FINDING OF GROSS NEGLIGENCE WITH RESPECT TO [redacted] THE MONETARY PENALTY CLAIM IS MITIGATED TO $2,531,088, PROVIDED THAT THE ACTUAL LOSS OF REVENUE OF $596,211 IS DEPOSITED. BASED ON A FINDING OF GROSS NEGLIGENCE WITH RESPECT TO [redacted], THE CLAIM AGAINST HIM IS MITIGATED TO $2,531,088.

A11

THIS DOCUMENT MAY BE RELEASED TO THE

NOTIFY PETITIONERS IMMEDIATELY WITH ADVICE THAT PAYMENT MUST BE RECEIVED BY JUNE 12, 1980, OR CASE WILL BE FORWARDED TO JUSTICE DEPARTMENT. INTERIM STEPS TO BE TAKEN TO PREPARE CASE FOR REFERRAL. ENCLOSE COPY OF THIS DECISION IN NOTIFICATION TO PETITIONERS.

29 JUL 1983

INF 4-02.2 R:E:C
653371 BLS

653371

District Director of Customs
Duluth, Minnesota 55802

Re: Case No. 83-3601-50008; [redacted]

Dear Sir:

This is in response to your memorandum dated June 30, 1983, (INF-4-02-DC TGB), forwarding the petition of [redacted] requesting relief from a monetary penalty of $83,500, assessed under title 19, United States Code, section 1592, for entering merchandise into the United States by means of false values.

The merchandise consists of fifty truckloads of precast concrete planks entered through the use of special Customs invoices on July 6, 1982. While the total declared value for all of the truckloads was $29,111 (U.S.), the actual contract price between the Canadian shipper and United States purchaser was $83,500 (U.S.) F.O.B. job site, Duluth. This is established by a copy of the contract between the parties, dated March 30, 1982. Under the agreement the Canadian shipper was responsible for payment of Customs duties.

Petitioner attributes the violation to inexperience in exporting, and to information provided by its broker, who advised that the value per truck load for Customs purposes was based on the direct cost (to petitioner) and not on the selling price.

In response thereto, the involved broker states that no such advice was given to petitioner, but rather petitioner was advised to submit to Customs a copy of the commercial invoice with petitioner's United States customer, as is customary on all commodities where the duty is based on the value.

You advise that in your experience, the broker has exhibited over the years a willingness to cooperate with Customs and a comprehensive knowledge of Customs laws and regulations. As a result, based on the broker's statements and other evidence in the record, you believe that the violation was of an intentional nature. Therefore, in accordance with normal disposition in cases involving fraudulent violations, you recommend that the penalty be mitigated to $16,216.40, an amount equal to eight (8) times the loss of revenue.

[illegible] TO THE

A13

We concur with your recommendation. Under the circumstances, the penalty of $83,500 is mitigated to $16,216.40. Please advise petitioner of our decision and include a copy thereof with your notice.

Sincerely,

Donald W. Lewis
Director, Entry Procedures
and Penalties Division

[redacted]

A14

03 MAY 1984

ENF 4-02.2 CO:R:E:C
653435 SLG

District Director of Customs
Baltimore, Maryland 21202

Dear Sir:

This is in reference to the petition of [redacted] ("petitioner"), seeking relief from a penalty assessed in the amount of $27,500, and from the seizure of one 1982 300 D Mercedes Benz vehicle, incurred for violation of title 19, United States Code, section 1592 (Baltimore District Case No. 83-1303-00017).

Petitioner on November 29, 1982, attempted to enter the above vehicle into the commerce of the United States by means of the false statements that the vehicle complied with all Department of Transportation (DOT) safety standards and that it was covered by a certificate of conformity issued by the Environmental Protection Agency (EPA). In addition, petitioner falsely declared that the vehicle bore a DOT certification label affixed by its original manufacturer and that it bore an EPA certification label or tag.

The subject vehicle, however, was not manufactured in conformity with DOT standards nor was it covered by an EPA certificate of conformity. Instead, the seized Mercedes Benz vehicle had been modified in Germany under petitioner's direction. The DOT certification label affixed to the vehicle, however, did not reflect petitioner or anyone else as the modifier of the vehicle. Although DOT regulations do not preclude the modifier of a vehicle from affixing the certification label or tag to the modified vehicle, it is required that the certification label indicate the name of the person affixing the label. (See 49 CFR 567.4(g)(1)).

The above false statements, which allegedly resulted from petitioner's fraud, were material in that they had the potential to alter the status of admission of the vehicle. If the vehicle had been allowed admission into the United States on the basis of petitioner's false claims described above, its entry into the United States would have been allowed on an unrestricted basis; Customs release of petitioner's bond filed with the entry would not have been conditioned upon the production of a letter or declaration from DOT and EPA, stating that the vehicle had been brought into or was in conformity with all United States safety and emission standards. (See 19 CFR 12.73(c) 12.80(e).) Thus,

B1

653435

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

although the false claims did not result in a loss of duties, they did have the potential of circumventing the Customs entry procedures for ensuring that all non-exempt imported vehicles complied with EPA and DOT standards.

As background, petitioner has claimed that the entry of the vehicle would have been made in the name of the purchaser of the vehicle, [redacted] but for the fact that the broker, [redacted] mistakenly prepared the entry documents in the name of [redacted] In this regard, petitioner submits a statement by its employee, [redacted] who signed the EPA and DOT forms involved in this case, [redacted] claims that she did not instruct the broker, [redacted] on how to complete any of the entry documentation for the subject vehicle. The manager of [redacted] however, claims in a statement to Customs (sent through petitioner) dated February 13, 1984, that [redacted] of [redacted]

> "had us indicate the importer as [redacted] and show on both EPA and DOT forms that the car complied".

Despite the foregoing inconsistencies regarding who instructed whom on the completion of the entry documents, both of the above parties represented petitioner in the subject transaction.

As importer of record, however, petitioner had ultimate responsibility for the accuracy of any statements made on its behalf to Customs. In this regard, petitioner primarily claims that the false statements on the EPA and DOT forms resulted from a miscommunication between the various parties regarding the nature of the vehicle. Petitioner submits that a confusion in completing the above forms arose from the fact that the vehicle had been modified for EPA and DOT compliance purposes, in Germany instead of in the United States.

In connection with the foregoing claims, however, the fact that petitioner also was the exporter of the subject vehicle also must be considered. Moreover, petitioner admittedly directed the affixation of the labels to the vehicle indicating that it had been manufactured in compliance with DOT standards and had been certified by EPA. Thus, even if [redacted] had been the importer of record of the subject vehicle, petitioner still would have been responsible for his actions with respect to the false DOT and EPA certification labels, since such actions would have constituted aiding and abetting the making of the false claims in violation of section 1592 (19 U.S.C. 1592 (a)(1)(B)).

653435

PUBLIC

B2

Petitioner has claimed that the labels were affixed to the vehicle by him after consulting with a DOT official and that since he modified the vehicle to conform with EPA and DOT standards, he believed that he could affix the labels. In our view, however, the very fact that it was petitioner who also attempted to import the vehicle by means of false claims, comporting with the false certification labels, negates a conclusion that these claims resulted from confusion.

On July 27, 1983, the subject seized vehicle was inspected by a DOT inspector who reported that the vehicle in fact was not in compliance with DOT safety standards. We, subsequently, have been advised further by the Department of Transportation that in addition to the vehicle not conforming with the agency's standards, the photographs forwarded by petitioner to DOT, for purposes of receiving a letter of approval from DOT, were <u>not taken of the vehicle which was inspected and attempted to be imported by petitioner.</u>

In light of the foregoing, we find that petitioners actions in this case resulted from culpability not less than fraud. Collectively, the false claims on the EPA and DOT forms, the false EPA and DOT labels affixed to the vehicle, and the submisson of false photographs to DOT, demonstrate that petitioner acted with specific intent to import the subject vehicle without complying with EPA and DOT emission and safety standards.

In accordance with our determinations above, the instant penalty claim and seizure are remitted upon payment of $14,850, plus storage charges; <u>provided</u>, however, that if imported, the corrected EPA and DOT forms are completed. Otherwise, the vehicle may be exported under Customs supervision upon payment of the above mitigated penalty.

Please advise petitioner of this decision and enclose a copy of this letter with your notification.

Sincerely,

/S/ Donald W. Lewis

Re: Petition on behalf of [redacted] for relief from a claim for monetary penalty of $16,096,510, assessed under title 19, United States Code, section 1592. St. Louis Case No. 80-4501-50175 PF

653495

Dear Sir:

This is in reference to your Memorandum dated January 12, 1984, in regard to the above-captioned matter.

The penalty was assessed for the reason that during the period between October 1974 through October 1977, [redacted] entered merchandise through Kansas City and identified a 5 percent charge paid to [redacted] as a non-dutiable buying commission. Various manufacturers were also identified on the entry documents as sellers of the imported merchandise. In some cases, it was found that the F.O.B. unit prices reflected on the entry documents and remitted to [redacted] were not the prices charged by the manufacturer, but rather represented [redacted] prices as a reseller of the merchandise. [redacted] also engaged in other activities and practices which reflected that it was acting as a seller, and not a buying agent.

During the entry period, [redacted] became aware that the transactions were not in accordance with the buying agency agreement filed with Customs, and that the entry documents were false. However, [redacted] continued to file these documents and did not advise Customs of these facts.

You report an actual loss of revenue of $1,458.91 and a potential loss of $133,979.67. Total loss of revenue is $135,438.58.

Initially, petitioner contends that the commission was bona fide and therefore the 5 percent fee paid to [redacted] was not dutiable. In the alternative, petitioner argues that under the principles of United States v. Getz Bros. (55 CCPA 11 (1967)), the 5 percent charge would not constitute part of the dutiable value of the goods.

These issues were the subject of petitioner's Protest No. 4501-2-000045, dated November 10, 1983. In a Headquarters decision dated December 27, 1984, we found through detailed analysis that [redacted] was a reseller of the goods and not a buying commissionaire, and that the Getz case was inapplicable to the facts herein involved. Accordingly, we held that the 5 percent charge was dutiable. Petitioner has received notification of this decision through your office.

Public ____ [illegible] to the

Apart from the appraisement issues, petitioner claims that at no time did [redacted] have any knowledge or reasonable cause to believe that [redacted] was acting other than as a bona fide buying agent. Petitioner points to the services performed by [redacted] e.g., arranging for inspection, shipping and packing of the merchandise, acting as the intermediary in meetings between [redacted] and the manufacturers, etc., all of the usual types of services of a buying agent. Specifically, [redacted] contends that it had no knowledge of [redacted] alleged profiteering, since if [redacted] was aware of these practices, it would have discontinued the relationship.

The record does show that in 1976 petitioner amended the original buying agency agreement between the parties in an attempt to avoid a repetition of the difficulties with Customs that had occurred in prior years resulting in violations of title 19, United States Code, section 1592. In each of the violations, the "agent" and the factory were related, and as a result Customs found that the claimed agency relationship was not bona fide.

In the amended agreement, executed on April 29, 1976, [redacted] certified that "...it has no ownership interest in, or any control of, or any financial interest in any of the factories...; that it does not on its own account sell raw materials to the factories...; and that the factories have no control of, interest in, or any ownership interest in the agent. [redacted] further certified that "...it would accept no remuneration for its services rendered under this agreement other than the commissions paid hereunder by the Buyer,...". Further, that "all documents, including Commercial and Customs Invoices must be an exact reflection of the purchase...".

While at this time it appears that petitioner may have reasonably assumed that [redacted] would act in accordance with its agreement, that situation soon changed. Thus, in an interview on February 9, 1980, [redacted] president at the time, [redacted] advised the Customs agent that in the summer of 1976, he was told by one [redacted] a competitor of [redacted], at a meeting in Kansas City, that [redacted] had been overcharging [redacted]. According to [redacted] who had been employed by [redacted] provided documentation in support of this allegation. However, [redacted] advised the Agent that at the time he was satisfied with [redacted] performance and did nothing to terminate the latter's employment. ([redacted] statements were subsequently confirmed by one [redacted] of [redacted] (a buying agent) who was at the meeting, and advised that it took place in August or September 1976.)

653495

B5

[redacted] further advised that he subsequently became disenchanted with [redacted] performance, and began looking around for a replacement. At that time, in March of 1977, he was advised by [redacted] one of [redacted] suppliers, that [redacted] had been overcharging [redacted] and the supplier produced documentation in support of such claim. The documents showed that [redacted] had sold a product to [redacted] at $67 whereas [redacted] sold the same item to [redacted] at $69.50. Additional information in the record confirms [redacted] knowledge of [redacted] activities, at least during the early part of 1977, and also reflects that other [redacted] officials were aware of [redacted] profiteering. It appears from the evidence that [redacted] continued to deal with [redacted] since its prices even with the overcharges were competitive, and because [redacted] was too involved with [redacted] at the time to abruptly halt their business transactions.

In summary, the evidence clearly shows that in August or September, 1976, [redacted] became aware or at least had reasonable cause to believe that [redacted] was in violation of the Buying Agency Agreement and was defrauding [redacted] As a result of its importing experience, particularly in view of its prior violations, it is also evident that [redacted] knew that Customs relied upon the accuracy of the submitted agreement in determining the dutiable status of the 5 percent fees paid to [redacted] and that [redacted] knew or should have known that [redacted] violations of the agreement were of a material nature.

Based on these facts, regardless of any business decision made to retain [redacted] [redacted] obligation was to advise Customs that it knew or had reason to believe that the submitted Buying Agency Agreement was not accurate, and to permit Customs to determine the bona fides of the agency relationship based on accurate, and not false or misleading, information. Petitioner's failure to take any affirmative action in this regard, when it knew or had reasonable cause to believe that the entered values and other information on the entry documents were false, reflects an indifference or disregard for its obligations under the statute.

Petitioner [redacted] believes that if any penalty is assessed, Customs should consider the fact that the present owner [redacted] had no interest in or relationship to [redacted] during the entry period. Further, with the exception of [redacted] who functions as [redacted] consultant, the other [redacted] employees who were involved with the transactions are no longer employed with [redacted]

653495

B6

The evidence shows that [redacted] was intimately involved with the transactions and the violation. Therefore, we find little reason to consider this claim as a factor in mitigation.

In conclusion, we find that for shipments entered after September 30, 1976, [redacted] knew or at least had reasonable cause to believe that the entry documents were false but continued to file these documents with Customs. This belief was confirmed in March of 1977, when [redacted] met with [redacted] as heretofore described. As a result, we find ordinary negligence with respect to entries filed between September 30, 1976, and March 31, 1977, and gross negligence with regard to entries filed subsequent to March 31, 1977. Petitioner's failure to advise Customs officials after the meeting with [redacted] reflects a wanton disregard for Customs requirements.

Under the circumstances, the claim against [redacted] is mitigated to $127,935, an amount equal to 2 times the loss of revenue applicable to entries filed between September 30, 1976, and (including) March 31, 1977; and 4 times the loss of revenue with regard to entries filed after March 31, 1977. This decision is conditioned upon payment of the actual loss of revenue by either of the violators.

Please advise petitioner promptly that compliance with this decision must be effected within 30 days from the date of this letter, or the matter will be referred to the Department of Justice, and provide a copy of the decision with your notice.

Sincerely,

(Signed) Edward T. Stevenson

John M. Walker, Jr.
Assistant Secretary
(Enforcement and Operations)

District Director of Customs
New Orleans, Louisiana 70130

Dear Sir:

This is in response to your memorandum dated August 1, 1984, whereby you forwarded the supplemental petition of [redacted] (petitioner). Further relief is sought from the claim for monetary penalty assessed in the amount of $316,244, and from the seizure of gambling devices consisting of 46 slot machines and one iron claw machine for violation of title 19, United States Code, section 1592 (New Orleans District Case Nos. 81-2002-00157, 00166, 00088).

Petitioner's liability for the penalty and seizure was incurred because during the period of July 18, 1980, through July 22, 1981, he, allegedly as a result of fraud, entered shipments of various items of bric-a-brac (e.g., antiques, pianos, and slot machines) into the commerce of the United States under cover of eleven consumption entries, by means of material false descriptions (the gambling devices were described as sewing machine parts) and false prices that were less than the prices actually paid for the goods. There is a reported actual loss of revenue of $2,856.67, a reported potential loss of revenue of $4,159.65, for a total loss of revenue of $7,016.32. Inasmuch as the importation of the gambling devices was restricted under title 15, United States Code, section 1173, seizure of these goods was authorized under section 1592.

By decision dated February 7, 1984, Headquarters upheld the allegation that the false descriptions and values resulted from fraud, but in considering petitioner's age and diminished physical and mental health as mitigating factors, the penalty and seizure were remitted upon payment by petitioner of the amount of $42,100. This remission also was conditioned upon petitioner's payment of the actual loss of revenue amount of $4,159.65.

On supplemental, however, petitioner claims that you have decided that the slot machines cannot be released because of the restrictions under section 1177, and that such decision is in error. Petitioner advises that seizures of gambling devices may be remitted as provided under section 1177 and under title 28, Code of Federal Regulations, sections 3.6 and 9.1 et seq. If Customs is not willing to release the gambling

PUBLIC ... WILL BE RELEASED TO THE

B8

devices, petitioner requests that in the alternative, they be forfeited and full credit be granted against the mitigated penalty and loss of revenue amounts in the instant case. In this regard, petitioner claims that the value of the seized slot machines and iron claw machine ($22,700 noted in seizure notice) has doubled since the dates of seizure (July and August 1981), and that consequently, such value now exceeds the mitigated penalty and loss of revenue amounts.

First, it must be stated for the record that Customs seizure of the gambling devices in this case was not made pursuant to title 15, United States Code, section 1177. These goods were seized pursuant to section 1592 only. The mitigated penalty in our decision dated February 7, 1984, represented the amount that petitioner must pay in order to obtain remission of both the seizure and penalty claim for $316,244, incurred for his violation of section 1592 alone. Thus, the terms for remission of the penalty and seizure under section 1592, is not relevant to the question of whether petitioner complied with the requirements under section 1173, regarding the importation of the gambling devices into the United States. Once the penalty and seizure under section 1592, are remitted, however, the requirements under section 1173, then will be relevant, but only with respect to Customs continued detention of the goods.

Upon careful review of this case, we find that petitioner already has been granted substantial mitigation of the penalty and seizure under section 1592. Notwithstanding petitioner's criminal conviction under title 18, United States Code, section 542, on the same entries involved in this case,* by our decision dated February 7, 1984, the personal penalty of $316,244, assessed against petitioner as well as the seizure of the gambling devices were remitted upon payment by petitioner of the amount of $42,100, plus the actual loss of revenue. The fact that petitioner's conduct may have resulted in violations of another law is no reason, in itself, for us to grant further mitigation of the penalty and seizure incurred under section 1592. Therefore, our initial decision in this case is affirmed.

Moreover, the penalty assessed against petitioner under section 1592 represents a personal claim for monetary penalty, while the goods under seizure represent security for collection of that personal penalty. At this stage, Customs has not

---

*As discussed in our February 7, 1984 decision, petitioner's plea of guilty to the criminal count under section 542 is res judicata on the issue of whether petitioner "knowingly and willfully" provided material false values to Customs.

B9

PUBLIC

attempted collection (either administratively or judicially) of the penalty assessed in this case. As discussed below, any collection action would be made for the original penalty amount and not the mitigated penalty provided in the administrative decisions. Thus, we also deny petitioner's request that the goods be forfeited and credit therefor be granted toward the mitigated penalty amount.

The gambling devices have not been seized by Customs under section 1177, and can only be seized under that statute by the FBI. Therefore, petitioner's claims regarding the applicability of the provisions under title 15, United States Code, section 1177 and title 28, Code of Federal Regulations, parts 3 and 9, for remission of the seizures not only are premature, but also are not addressed to the proper government agency.

Once the mitigated section 1592 penalty is paid, the seizure of the gambling devices will be remitted. Thereafter, in accordance with the agreement between the Federal Bureau of Investigation (FBI) and Customs (Customs Directive 3257-01), however, the slot machines still must be detained until the FBI provides instructions as to their release from Customs. Petitioner should present his claims supporting the remission of seizures under section 1177, to the the local FBI office, with the request for permission to comply with registration requirements of the Gambling Devices Act. This may facilitate FBI authorization for Customs to release the gambling devices to petitioner.

On the other hand, however, petitioner should be aware that the FBI may decide to seize the gambling devices under section 1177, after Customs has remitted the seizure under section 1592. In this regard, title 28, Code of Federal Regulations, section 3.6, provides that the power to authorize remission or mitigation of seizures of gambling devices under section 1177, "shall be exercised only by the Attorney General, the Deputy Attorney General, or the Assistant Attorney General in charge of the Criminal Division."

If, however, the mitigated penalty in this case is not paid within the time prescribed by your office, petitioner should be advised that the case will be referred to the Department of Justice immediately, for judicial enforcement of the original penalty claim ($316,244), with the request that the gambling devices be forfeited as part of the government's prayer for relief.

SUBJECT: Proposed Settlement Agreement by [redacted]
in El Paso District Case No. 83-2402-50087

We have reviewed the proposed settlement agreement in the above-entitled case. Additional information forwarded for our review reflects that on April 15, 1983, a notice of penalty was issued for an unspecified amount of interest on an estimated loss of duties of $112,952. During the period of April 12, 1978, through December 31, 1978, [redacted] is alleged to have entered or attempted to enter various television apparatus into the United States by means of material false statements or material omissions. In reporting actual costs for the 1978 entries, certain components and materials were declared as being of United States origin when in fact they were either of foreign origin or could not be verified by certificates from United States vendors as to their United States origin.

Prior to the issuance of the penalty notice, by letter dated February 10, 1982, counsel for [redacted] disclosed that [redacted] had discovered inadvertent errors in the declaration of materials in its 1979 entries and tendered the amount of $160,375.44, in additional duties. At that time counsel for [redacted] also advised Customs that it would be reviewing prior years (1973 through 1978), for purposes of determining whether additional duties were owed with respect thereto. By letter dated March 28, 1984, counsel for [redacted] advised that an audit of prior year reconciliation records could not be made primarily because of [redacted] sale of the [redacted] to [redacted] on January 21, 1981. Consequently, [redacted] offered to pay the entire amount of estimated duties for 1978 that was cited in the penalty notice, plus interest in the amount of $5,048, in full satisfaction of all prior year liabilities.

[redacted] already has tendered the amount of $85,043.09, as the amount on 1978 importations for which it believed the statute of limitations period had not yet expired. In the settlement

B12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

agreement [redacted] proposes to pay the balance of the total amount cited by Customs ($112,952) as the loss of duties for the 1978 importations $27,908.91, plus, the interest in the amount of $5,048.

We are advised that Customs on its own volition has not conducted its own audit or investigation of the violations or of the amount of duty underpayment for the 1973-1978 entries by [redacted] Moreover, even the estimated loss of duty amount cited in the penalty notice can be established only by an extrapolation of the 1979 duty reconciliation. In view of the foregoing and the other factors cited in your January 17, 1985, memorandum to the District Director, El Paso, we agree that the proposed settlement offer is in the best interest of the government.

In view of the fact that the terms of the settlement agreement requires that Customs forego the issuance of claims for penalty and/or duties, this matter represents an offer of compromise under section 1617. The District Director, El Paso, however, is hereby authorized to sign the subject settlement agreement on behalf of the Customs Service.

Regional Commissioner of Customs
Boston, Massachusetts 02110

Re: Further Review of Buffalo Protests 0901-2-000519/520, dated November 10, 1982

Dear Sir:

This is in response to a letter dated April 5, 1985, from the Deputy Assistant Regional Commissioner (Classification and Value) regarding the above-captioned matter.

In its Application for Further Review and supporting memorandum, [redacted] ("Protestant") makes the following claims:

(1) Protestant is not liable for the additional Customs duties resulting from the liquidation and/or reliquidation of the subject entries since there is no properly executed Customs bond which obligates Protestant as surety for these additional duties;

(2) Assuming there is a properly executed bond listing Protestant as surety for the importer, such bond does not obligate Protestant for payment of the additional duties since the obligation to pay such duties resulting from reliquidation of Customs entries on account of fraud is not covered by the terms of the Customs bond;

(3) The increased duty bills resulting from liquidation and/or reliquidation are not due and owing since in accordance with the amended Judgment and Order of the United States District Court for the Western District of New York in United States v. Tiler, et al, the Government has been made whole by [redacted]

(4) The reliquidations are illegal, null and void since such reliquidations occurred more than two (2) years from the date of liquidation in violation of title 19, United States Code, section 1521.

Our findings in this matter, as reflected below, establish that there is a properly executed Customs bond obligating Protestant as surety to pay the additional duties; that the terms

B14

of the bond cover the additional duties resulting from reliquidation on account of fraud; that the deposit of $100,000 by [redacted] was in payment of a mitigated Customs penalty and did not cover payment of Customs duties; and that the reliquidations were timely, i.e., within two years from the dates of the previous liquidations.

(1) Properly Executed Bond. The subject standard bond, CF 7553, for Immediate Delivery and consumption, was executed with appropriate certifications on February 4, 1976, by [redacted] as principal, and Protestant as surety. The bond provisions obligate Protestant, as surety, to insure the payment of duties, to a maximum of $70,000, incurred by [redacted] for the period between July 1, 1976, through June 30, 1977. (The subject entries were filed during this period.)

Based on a review of this document, we fail to find any impropriety in its execution, as claimed by Protestant. We note in this regard that Protestant has failed to specify in what manner the execution of this document was allegedly improper.

(2) Coverage of Bond-Duties Resulting from Reliquidation. The duties resulting from reliquidation of the entries, whether or not on account of fraud, are nevertheless still Customs duties. We find no exclusion under the terms of the bond for additional duties found to be due and owing after reliquidation for fraud. Rather, the bond provisions merely bind the principal "to pay any and all such duties and taxes found to be due on each entry in question...". There is no basis for the surety to avoid liability under this claim.

(3) Payment of "Duties" Made by [redacted] Pursuant to this argument, Protestant claims that in the criminal case against [redacted] the District Court and Court of Appeals characterized the payment of $100,000 made by [redacted] to Customs (in the administrative penalty case) as payment for additional duties lost as a result of the criminal offense. Since these funds satisfy the outstanding duty bill of $65,407.58, Protestant claims that this alleged liability should be cancelled.

It is clear that Protestant has seized upon some rather loosely worded language of the District Court in order to present an argument that at best is interesting, but has no basis in fact.

653887

CLOSED TO THE

c1

The record establishes beyond doubt that the Customs Service never intended that the $100,000 payment made by [redacted] serve to reduce the duty liability of the importer. On July 6, 1978, a claim for forfeiture value assessed against [redacted] and [redacted] jointly and severally, was mitigated only against [redacted] to $100,000. In a letter to [redacted] counsel, dated June 5, 1979, Headquarters advised that the payment by [redacted] "...is not considered by the Customs Service as a payment of duties". This was confirmed by Headquarters letter dated October 4, 1979. (In a subsequent decision, the claim for forfeiture value against [redacted] was mitigated to $2,443,577.63, on condition the actual loss of revenue of $517,909.47 was paid as withheld duties. The mitigated amount represented a reduction from the assessed monetary claim of $100,000, to take into account that sum paid by [redacted] as a mitigated penalty.)

As further evidence of the nature of this payment, the Regional Director, Financial Management Division, advised Protestant's counsel in a letter dated October 28, 1982, that the $100,000 payment was placed in a Customs account designated as "Fines, Penalties and Forfeitures, Customs, Commerce and Anti-Trust Laws". This is a different account than the account that would have been used had the monies been directed toward the payment of duties. In addition, as the Regional Director also pointed out, even if we assumed that the [redacted] payment was intended to be applied to make the Government whole as far as lost revenues, the District Court's language did not limit the payment to reduce only the potential loss of revenue. Therefore, if used to reduce the actual loss of revenue ($517,909.74), the potential loss of revenue ($65,407.58) would still remain, along with the surety's liability.

(4) Dates of Reliquidation. In regard to this claim, the following schedule establishes that all of the reliquidated entries were reliquidated within two (2) years from the dates of liquidation:

Consumption Entry	Date of Liquidation	Date of Reliquidation
223327	2/18/77	9/11/78
327627	10/22/76	"
200935	10/29/76	"
326552	9/24/76	"
324533	9/22/76	"
325600	9/22/76	"

C2

This Document [illegible] to the Public

onsumption Entry	Date of Liquidation	Date of Reliquidation
235560	2/25/77	"
320789	1/14/77	"
222564	1/7/77	"

Under these circumstances, we find no merit in the arguments advanced by Protestant. Accordingly, you are directed to deny the protests.

Sincerely,

(s/ Donald W. Lewis

[redacted]

Dear [redacted]

This is in reply to your letter of October 18, 1976, concerning the country of origin marking requirements applicable to electrical junction boxes imported from Japan.

You state that the junction boxes presently being imported by [redacted] are marked with a ¼" large "JAPAN" on the inside of each box, which is visible to the ultimate purchaser through the carton. You state that it is your belief that this manner of marking the country of origin on the junction boxes satisfies the requirement imposed by section 304 of the Tariff Act of 1930 and, therefore, you should not be required to mark the country of origin on the outside of each junction box, as you are instructed to do in a letter dated October 5, 1976, from the District Director in Philadelphia.

It is the opinion of the Customs Service that the method of marking presently employed by [redacted] does, in fact, comply with the requirements imposed by section 304, since the marking will be readily visible to an ultimate purchaser at the time of purchase, and will also be visible after installation of the boxes.

The letter you received dated October 5, 1976, from the District Director in Philadelphia was the result of a letter from Headquarters to the District Director requesting him to take action to assure that boxes of the kind you previously imported for the account of [redacted] were properly marked to indicate the country of origin. You have assured us that the last of those boxes entered into consumption in the United States in June of 1974, and, accordingly, that matter is now closed.

Sincerely yours,

[redacted]

6 DEC 1977

MAR-2-05-R:E:R
708213 O

[redacted]

Dear [redacted]

In your letter of August 23, 1977, you asked if the Customs Service would have any objection to an additional marking on imported goods manufactured abroad, so long as the country of origin of the goods is clearly stated. We understand that prior to January 1, 1978, Company A will ship merchandise to Company B marked "Manufactured for Company C" or "Distributed by Company C." On or after January 1, 1978, Company A will ship merchandise from Germany to Company C marked "Manufactured for Company B" or "Distributed by Company B." In both examples, Company C is owned by Companies A and B and will not go into operation until January 1, 1978.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides that all articles of foreign origin imported into the United States are required to be marked legibly, conspicuously and permanently, to indicate the country of origin to an ultimate purchaser in the United States. In addition, we note that the packaging and labeling requirements of some 35 States require that the company importing merchandise into the United States qualify the company name and place of business by a phrase such as, "Imported by _____," or "Manufactured for _____," to reflect the fact that the company importing the goods is not the manufacturer.

Accordingly, the U.S. Customs Service would have no objection to the use of the marking you propose, so long as the English name of the country of origin appears legibly and permanently on the imported article, preceded by "Made in," "Product of," or other words of similar meaning.

Sincerely yours,

[redacted]

[redacted]

Dear [redacted]

This is in response to your letter of August 30, 1979, suggesting that the United States Customs Service reevaluate the value figure that determines whether a shipment requires a formal Customs entry.

The $250 value limitation on informal entries is a requirement of statutory laws, rather than regulations. Sections 484 and 485 of the Tariff Act of 1930, as amended (19 U.S.C. 1484 and 1485), set forth the usual entry and declaration requirements which are commonly referred to as the formal entry requirements. Section 498(a)(1) Tariff Act of 1930, as amended (19 U.S.C. 1498(a)(1)) liberalizes the above requirements when the aggregate value of the shipment does not exceed $250, by authorizing the Secretary of the Treasury to prescribe rules and regulations for the declaration and entry of these shipments. Any further increase in the dollar amount under which informal entry is permitted would require an amendment of section 498(a)(1) of the Tariff Act and is, therefore, properly a matter for legislative consideration and action by Congress.

In the last several sessions of Congress, various bills have been introduced containing provisions for raising the dollar value limitation on informal entries, but none of these provisions have been enacted into law. For example, section 211(a) of H.R. 8149, which was introduced in the last session of Congress, provided for raising the dollar value of merchandise eligible for informal entry from $250 to $600. However, prior to enacting this bill, section 211(a) was deleted. It is our understanding that a bill will be before Congress again this session proposing to raise the dollar value limitation on informal entry.

Dear [redacted]

This is in response to your letter of September 24, 1981, concerning questions on the country of origin marking requirements for analog devices. It is your opinion that one of two devices is substantially changed in the United States.

The devices, AD562JD, are marked since they are assembled in the Philippines and must continue to be so marked, but PHIL is unacceptable and the entire country name must be spelled out.

In the "Laser Trimming" process, the partially assembled device is placed in a fixture that contains a series of needle-like probes which have been positioned to match exactly the configuration of the chip. The probes are wired to a computerized test station-permitting a very rapid series of tests to be performed on the die. The parameter of interest is measured to determine the magnitude of the error. If the error is excessive, the laser is aimed at the thin film resistor to be modified and is fired. This removes a portion of the element causing a change in the error. This measure trim cycle is repeated until the error is reduced to acceptable limits. Depending on the complexity of the device, a dozen or more different errors, each with its own thin film resistor, may be reduced in the manner to produce a useable part.

These particular devices are then transferred to the sealing area so that a lid may be welded/soldered in place. They are then tested, branded, and shipped to the customer.

The process described above is performed on AD515JH devices which the importer proposes to bring into the U.S.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides generally that all articles of foreign origin imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

Section 134.1(d)(1) of the Customs Regulations (19 CFR 134.1(d)(1)), holds the manufacturer to be the "ultimate purchaser" if he subjects the imported article to a process which results in a substantial transformation, changing the character and use of the imported article which loses its identity in the manufacturing process. Substantial transformation means that the manufacturing process is performed on an item so that the item loses its identity and becomes an integral part of a new article with a new name, character and use (United States v. Gibson-Thomsen Co., Inc., 27 C.C.P.A. 267, C.A.D. 98).

717802

C8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In this case, the "Laser Trimming" process in the U.S. does not result in a substantial transformation.

We are of the opinion that the testing, adjusting by the laser trimming process, and capping are not sufficient operations to substantially transform the imported semiconductor chips. In their imported condition, they constitute unfinished articles and are not transformed into new and different articles by the testing, adjusting, and capping processes, therefore must be individually marked with the country of origin.

Sincerely,

Signed Darrell D. Kast

This ruling concerns knocked-down wood furniture and cabinets, unfinished from Denmark.

ISSUE:

Whether unfinished pieces need to be marked with the country of origin.

FACTS:

Certain knocked-down wood furniture and cabinets are imported unfinished from Denmark. None of the wood pieces are marked, but the carrying package for each individual furniture item is marked. According to the importer, the packaged form is intended for the ultimate purchaser and has the instructions printed thereon. Also, the importer says the expense and quality of the immediate container becomes a significant part of the retail value of the product.

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides generally that all articles of foreign origin (or their containers) imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

In this case, if the individual containers are marked. It will be acceptable.

720898

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C10

HOLDING:

To satisfy 19 U.S.C. 1304, the containers of the furniture items may be marked in lieu of marking the individual items.

DEPARTMENT OF THE TREASURY U S CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

JAN 27 1983

ENT-1-01 CO:R:E:E
721242 M

Dear Sir:

This concerns Protest No. 2605-1-000003 dated July 23, 1981, concerning aircraft engine parts shipped to the United States for assembly into aircraft engines, which are to be subsequently exported to be incorporated into aircraft which are to be ultimately used by the U.S. Coast Guard.

You note that two issues were raised in this protest. The issues raised are the following:

(1) whether these engine parts are duty-free when ultimate use was to be in an aircraft of the Coast Guard, and

(2) whether a claim for duty free treatment under the Civil Aircraft Agreement is valid when made after the filing of the entry summary.

In regard to the second issue, since the claim for free entry was not made at the time of the filing of the entry summary and there is no showing that such failure was due to a clerical error, mistake of fact, or inadvertence within the meaning of section 520(c)(1), as amended, the protest should be denied in full on the basis of ORR Ruling 7167812 M dated October 27, 1981. We have likewise denied two other protests on the basis of ORR Ruling 716812 M. (See enclosed copies of ORR Rulings 718524 M dated March 4, 1982, and 719826 dated July 21, 1982.)

In regard to the first issue raised, it would appear from the excerpt of the agreement between the buyer and seller that the buyer has the intent to enter into a contract of sale with the U.S. Coast Guard. Schedule 6, Part 6c, Headnote 3(b), Tariff Schedules of the United States (TSUS), defines the term "civil aircraft" as "all aircraft other than aircraft purchased for use by the Department of Defense or the United States Coast Guard". Based on the scanty information submitted by the protestant (the excerpt of the agreement), it appears to us that there was an intent at the time of entry for the Coast Guard to be the ultimate purchaser and user of the completed product (the aircraft engines), and therefore, in our opinion, the imported aircraft parts do not qualify as parts for civil aircraft within the meaning of the Civil Aircraft Agreement. The protest should

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C12

likewise be denied on this basis. However, as a point of interest, we wish to note that there are occasions due to the limited scope of an agreement whereby the Coast Guard or a military department might be a temporary beneficiary and the aircraft or aircraft part involved would qualify for duty free entry under the Civil Aircraft Agreement. For example, see ORR Ruling 070689 JAS dated November 2, 1982.

Sincerely,

(Signed) DONALD W. LEWIS

This ruling concerns whether or not the prohibition set forth in 15 U.S.C. 1124 against the entry at any customhouse of the United States of articles of imported merchandise which shall copy or simulate a U.S. registered trademark would be applicable to two imported handbags.

ISSUE:

Would the entry of two handbags infringe the rights of Gucci Shops, Inc., which has recorded their registered trademarks for repeating facing non-interlocking "GG" and "GUCCI" with Customs for import protection.

FACTS:

A shipment of 27 ladies canvas and leather handbags arrived at the Port of Honolulu, Hawaii. Our Honolulu district office submitted a sample of one of the handbags and a color photograph of another to Customs Headquarters for consideration of the question of whether or not the marks on the bags infringe the registered trademarks of Gucci Shops, Inc., referred to above. The importer claims that they were appointed as the exclusive distributor of the handbags in Hawaii, Guam and the Fiji Islands by Dodo Mark 1 S.r.l., and that Dodo Mark 1 S.r.l. was authorized to make such an appointment pursuant to a license granted by Gucci Parfums S.P.A. of Florence, Italy.

The sample canvas handbag bears a pattern of repeating facing non-interlocking "GG"'s which would be identical to the protected trademark of Gucci Shops, Inc., except that the word "PLUS" runs through every one of the "GG"'s. The "PLUS" mark is inverted in alternate "GG"'s. Other marks on the handbag in question are a "P" superimposed over a "G" stamped in brass to form the circular closure device in the center of the bag, and the mark "GUCCI" engraved on a metal plate attached to the zipper pocket inside the bag. In addition, the word "plus," in script, and a "P" superimposed over a "G" are embossed in gold leaf on the inside pocket directly over the metal plate engraved with the "GUCCI" mark. The color photograph of the second canvas handbag shows a pattern of repeating "P" superimposed over a "G" marks. This mark is also stamped in brass on the closure device.

C14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

LAW AND ANALYSIS:

Section 42 of the Act of July 5, 1946 (commonly referred to as the Lanham Act, 60 Stat. 440, 15 U.S.C. 1124) prohibits the entry at any customhouse of the United States of articles of imported merchandise which shall copy or simulate a U.S. registered trademark, provided a copy of such trademark registration is filed with the Secretary of the Treasury and recorded in the manner provided by regulations (19 CFR 133.1 - 133.7). A "counterfeit trademark" is a spurious trademark which is identical with, or substantially indistinguishable from, a registered trademark (19 CFR 133.23a(a)).

Infringement of federally registered trademarks is governed by the test of whether defendant's use is likely to cause confusion, or to cause mistake, or to deceive. When comparing conflicting marks to determine whether or not they are confusingly similar, it is important to consider the impression the marks as a whole create on the average reasonably prudent purchaser.

We contacted the Washington, D.C., counsel for Gucci Shops, Inc., to get his reaction to the importer's claim that they have been appointed by Dodo Mark as the exclusive distributor of "GUCCI PLUS" products in Hawaii. Counsel for the trademark owner provided us with a copy of an opinion and order of the U.S. District Court for the Southern District of New York dated May 3, 1984, in the case of Gucci Shops, Inc. v. Dodo Mark 1 S.r.l., et al., 84 Civ. 2089(RO), which enjoins Dodo Mark from selling "GUCCI PLUS" products in the United States during the pendancy of the proceedings. The court will decide the validity of the license between Gucci Parfums and Dodo Mark which purportedly granted Dodo Mark the right to manufacture and distribute "GUCCI PLUS" products in the U.S.

In his opinion, Judge Owen mentions the fact that Dodo Mark does not deny that its "GUCCI PLUS" products closely resemble the "Gucci Accessories Collection" in virtually every respect. Dodo Mark is relying on its license with Gucci Parfums to establish that it is entitled to use the widely recognized Gucci trademarks of interlocking G's and red and green stripes. Judge Owen also mentions Plaintiff's assertion that Paolo Gucci is embroiled in a struggle of some sort with other members of the Gucci family and has begun issuing licenses, such as the license to Dodo Mark, without their consent. Judge Owen has enjoined the sale of "GUCCI PLUS" products in the United States upon consideration of the possible irreperable harm to Gucci Shops, Inc., their probable success on the merits, and a balance of hardships tipping decidedly in their favor. Therefore, in our opinion, the importer's claim that the handbags in question are noninfringing because their importation and sale in the United States is licensed by Dodo Mark, is not valid.

721335

D1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The unauthorized use of the "GUCCI PLUS" marks on the sample handbags as described above, in all likelihood, would cause confusion or mistake, or would deceive purchasers into believing they were purchasing genuine Gucci handbags. The addition of the word "PLUS" running through every "GG," in our opinion, would not eliminate the confusion. The use of the repeating facing non-interlocking "GG's" appears to us to be a deliberate attempt to come as close as possible to the protected trademark without duplicating it exactly. While the "GUCCI PLUS" marks used on the sample handbag are confusingly similar to the trademarks of Gucci Shops, Inc., they can be distinguished from the appearance of the genuine mark by the word "PLUS" running through each "GG" and embossed in gold leaf above the "GUCCI" mark inside the handbag. As stated above, a "counterfeit trademark" is a spurious trademark which is identical with or substantially indistinguishable from a registered trademark. In view of the distinguishing feature referred to above, the Customs regulations applicable to counterfeit trademark violations would not apply in this case.

Furthermore, we are of the opinion that the use of the "P" sumerimposed over a "G" mark as a repeating pattern on the canvas portion of the handbag shown in the color photograph and on the closure device of this handbag, would not infringe any of the Gucci trademarks protected by Customs.

HOLDING:

The sample handbags would be prohibited entry into the United States as infringing the registered trademarks of Gucci Shops, Inc. These handbags should be detained pursuant to 19 CFR 133.22. Articles detained pursuant to 19 CFR 133.22 may be released to the importer if any of the circumstances allowing exemption from trademark restrictions set forth in 19 CFR 133.21(c) are established. Alternatively, pursuant to 19 CFR 133.51(b)(1), they may be exported or destroyed under Customs supervision and at no expense to the Government. Since the marks on the handbags shown in the color photograph do not infringe any of the trademarks of Gucci Shops, Inc., they may be imported in unlimited quantities without restriction.

A copy of this decision may be furnished to all concerned parties.

721335

DEPARTMENT OF THE TREASURY
U.S. CUSTOMS SERVICE
WASHINGTON

SEP 4 1984

REFER TO
TMK-3 CO:R:E:E
721398 SO

Gentlemen:

This is in response to your letters of February 4 and February 9, 1983, on behalf of concerning a notice of redelivery issued by the Customs Service for a shipment of handbags which was originally released to your client. The notice was issued because the bags allegedly infringed the registered trademarks of Gucci Shops, Inc., a New York corporation (Gucci). A representative of Gucci visited your client's premesis and confirmed that the handbags were legitimate Gucci bags, manufactured in Italy. You subsequently spoke to an attorney for Gucci who stated that his firm is, in fact, a subsidiary of the Italian company, Guccio Gucci, S.R.L. Therefore, you informed Customs at LAX that this was a "Grey Market" or "parallel import" situation where the trademark owner was not entitled to import protection for genuine trademarked articles.

subsequently denied having made the statement you attribute to him regarding the relationship between Gucci and the Italian firm mentioned above. You asked us to look into the possibility that a relationship exists which would substantially change the protection to be extended to Gucci. In view of statement, and because the provisions of 19 CFR 133.2 require trademark owners to disclose the identity of any parent or subsidiary company or other foreign company under common ownership or control, you feel that Customs should require Gucci Shops, Inc., to present evidence which would establish conclusively that there is no relationship between their firm and an Italian Gucci firm which would preclude the Customs Service from prohibiting the importation of genuine Gucci products.

We asked Gucci Shops, Inc., to furnish complete information concerning the ownership of their firm and authorized foreign distributors of Gucci products, if any. We learned that there are many foreign authorized distributors of merchan-

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D3

dise bearing Gucci owned trademarks and that members of the Gucci family share common ownership and control of both Gucci Parfums, S.p.a., in Italy and Gucci Shops, Inc., in New York. We have enclosed a copy of the notice issued to Customs field offices on August 9, 1984, to inform them of the change in import protection applicable to genuine goods manufactured abroad bearing "Gucci" trademarks. As of that date, Customs will permit the unrestricted importation of genuine merchandise manufactured abroad bearing Gucci trademarks, and will release all such goods currently in Customs custody to the importers.

Sincerely,

Samuel A. Biondolillo

This ruling concerns the country of origin marking of imported electrical conductors.

ISSUE:

Whether the marking of the individual boxes of electrical conductors would meet the country of origin marking requirements of 19 U.S.C. 1304.

FACTS:

The importer is the manufacturer and importer of certain electrical conductors. The intention of the importer is that these conductors will eventually be made in the United States. Presently some are imported from England, some from West Germany and other from Haiti. The ones from Haiti have components made in Germany, but assembled into the conductors in Haiti. The imported products are packed in cardboard boxes abroad and marked by stamping the boxes "Made in England," Made in West Germany," or "Components made in West Germany, Assembled in Haiti." After importation, the importer sells the products direct to manufacturers who use the conductors in further manufacturing operations, or sell through distributors who sell to manufacturers. The importer intends to give notice to distributors that any break down of the boxes into lesser amounts and repackaged must be marked also. The importer is supplying plastic marked bags to all distributors to cover this eventually.

721814

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

DS

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides generally that all articles of foreign origin (or their container) imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

Section 134.1(d) Customs Regulations (19 CFR 124.1(d)) states that the ultimate purchaser is generally the last person in the United States to receive the articles in the form in which it was imported.

In this case, the ultimate purchaser is the manufacturer who uses the conductor in further manufacturing operations. The method of marking the conductors would be acceptable including supplying marked bags to the distributor in case the boxes are broken down to smaller numbers, which the importer says is unlikely to happen.

HOLDING:

The marking of individual boxes of electrical conductors with the country of origin meets the requirement of 19 U.S.C. 1304.

Donald W. Lewis
Director, Entry Procedures
and Penalties Division

This ruling concerns a proposed marking designator for Haiti.

ISSUE:

Whether the designation "Hand-Tied in Haiti" would be acceptable for purposes of 19 U.S.C. 1304.

FACTS:

The importer will send ribbon from the U.S. along with tying and packaging materials to Haiti where the bows are tied, mounted on a backing card, and sealed in a clear plastic bag. Merchandising information is preprinted on the cards along with the company name and the U.S. address. The importer would like to use the marking designator "Hand-Tied in Haiti" instead of "Made in Haiti" or "Product of Haiti."

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended, (19 U.S.C. 1304), provides generally that all articles of foreign origin imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

The marking designation "Hand Tied in Haiti" is acceptable as long as all the requirements of 19 U.S.C. 1304 are met. The merchandising information must not be displayed in such a way to give any indications to the ultimate purchaser that the product is other than Haitian.

723258

D1

HOLDING:

The marking designation "Hand-Tied in Haiti is acceptable for 19 U.S.C. 1304.

DEPARTMENT OF THE TREASURY U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE

MAR 2-05 CO:R:E:E
723780 HL

NOV 21 1983

ISSUE:

Whether the domestic processing of imported frame castings into C-Clamps is a substantial transformation so as to exempt the castings from country of origin marking requirements under 19 U.S.C. 1304.

FACTS:

An American manufacturer of C-Clamps imports iron frame castings into the United States. In their condition as imported, the frame castings are rough, having already been broken from the mould by the foreign producer. They have burrs and moulding lines which run along the edges of the frame as well as over the seat and anvil (which will become the working surface of the tool). The frame casting must be drilled (to create a hole in the seat opposite the anvil) as well as threaded (for insertion of the mainscrew and button which forms the working edge of the clamp, being screwed up and down to hold various items against the anvil). The casting must be deburred, subjected to grinding, and painted. The finished frame is assembled into a C-Clamp with three other parts, the mainscrew, crosspin, and button, which are all of American origin. Generally, the subject manufacturer will process the American parts (mainscrew, crosspin, and button) himself, but may purchase already threaded mainscrews in some cases. In either case, the cost of the imported frame casting is about one-fourth the total cost of the finished C-Clamp.

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides in general that, unless exempted, all articles of foreign origin imported into the United States must be legibly and conspicuously marked to

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

indicate the English name of the country of origin to the ultimate purchaser in the United States.

The ultimate purchaser is generally the last person in the United States who will receive the article in the form in which it was imported. 19 CFR 134.1(d). If the American company processing the imported frame castings into finished C-Clamps "substantially transforms" the castings into new and different articles, then such company will be considered the "ultimate purchaser" and we will exempt the frame castings from country of origin marking under 19 U.S.C. 1304(a)(3)(D). 19 CFR 134.35; United States v. Gibson-Thomsen, 27 C.C.P.A. 267, C.A.D. 98 (1940).

723780

In their condition as imported, the frame castings are not fully machined, and cannot be used as C-Clamps until additional and crucial machining is performed. The castings must be drilled and threaded for insertion of the mainscrew, button, and crosspin, which are three additional parts of U.S. origin necessary to make the C-Clamp a working tool. Indeed, three-quarters of the total cost of manufacture of the C-Clamp is incurred in the United States. See Uniroyal Inc. v. United States, 542 F. Supp. 1026 (C.I.T. 1982).

It is our position that the subject American manufacturer substantially transforms the frame castings into C-Clamps and, therefore, is the ultimate purchaser of the castings which may be exempted from individual marking under 19 U.S.C. 1304(a)(3)(D) provided: (1) the containers in which the frame castings are imported are legibly and conspicuously marked to indicate the country of origin; (2) Customs officers at the port of entry are satisfied that the castings will reach

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D10

the subject company in the original marked containers in which imported; and (3) the castings will be used only in the manufacture of the C-Clamps described herein and not otherwise sold. Statements or affidavits to this effect must be submitted for each entry for which this exception is requested.

HOLDING:

Imported frame castings, processed into C-Clamps by further machining such as drilling and threading for the insertion of mainscrew, button, and crosspin, are substantially transformed by the American processor who is deemed to be the "ultimate purchaser" of the castings which are thereby excepted from individual country of origin marking under 19 U.S.C. 1304(a)(3)(D).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D11

NOV 15 1984

THK-3 CO:R:E:E
725248 TL

Area Director of Customs Service
6 World Trade Center
New York, New York 10048

Dear Sir:

This letter is in response to a request for Internal Advice (IA 47/84) concerning the importation of handbags which may infringe upon a trademark owned by Gucci Shops of New York.

The question concerns whether the decoration on the imported handbags is a simulation of the trademark recorded with Customs in Registration Numbers 1,216,708; 1,223,400; and 1,220,263.

The trademark recorded with Customs is a series of two Gs; the one on the left is right side up, the one on the right is upside down. Each G has a 'tail,' a horizontal mark which distinguishes a G from a C. The tails face each other and are parallel to each other. Four double Gs are arranged at each of four points of intersection of lines connecting the Gs to form a diamond; the four double Gs represent the four points on the diamond.

The allegedly infringing handbags also have symbols at the corners of each diamond in the series of diamonds, although only three of the four corners are formed by the symbol. The fourth corner of each diamond is formed by the near intersection of four, arrow-like, symbols. Each of the three symbols consist of a circle slightly larger than the diameter of a pencil. Measuring left to right, a third is cut from the circle, by removing the top and bottom third of the middle third of the circle, again measuring from left to right. A small bridge approximately a third of the height of the symbol remains to connect the remaining 'halves' of the circle. Because of the removal of the top and bottom portions from the middle of the circle, the width of the left and right hand portions of the symbol is noticeably less than half of the height of the symbol.

The denial of entry and forfeiture of articles, pursuant to section 133.21, Customs Regulations is appropriate when the articles simulate the trademark, that is, the design on the imported article is so similar to the recorded trademark as to be

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D12

likely to confuse or deceive the public or cause the public to mistakenly think that the imported articles and recorded trademarked articles both share a common origin. E. I. Dupont de Nemours and Company v. Yoshida International, Inc., 393 F. Supp. 502, 509, (E.D.N.Y. 1975) In our opinion, the symbols on the imported articles will not confuse the public.

Several distinctions between the trademark and the imported article which should be apparent to the consumer or even the casual observer are readily apparent. The recorded trademark consists of two Gs, one normal, the other upside down, with the open side of the Gs facing each other. The Gs are slightly separated. The width of each G is at least one-half, possibly more, of the height of the G itself. Contrasted to this, the symbol on the imported articles does not appear as two separate figures; it is one symbol and the width of the right and left hand portions (sans the bridge spoken of earlier) is appreciably less than one-half the height of the symbol. Thus while the width to height ratio of the trademark is a plump G, the symbol on the questioned article is flatter, less round. As noted, supra, the halves are joined by a bridge. Contrasted to this the horizontal portion of the G of the trademark does not touch the other G or come close. Additionally, as noted above, each of the points of the diamond of the trademarked article is defined by the double G symbol; on the imported article only three of the corners are. Finally, the double G of the trademark are joined by dots; on the imported article lines join the symbols.

Since the imported article does not simulate the trademarks recorded with Customs, the denial of entry and forfeiture provided for in section 133.21, Customs Regulations, is improper. The handbags should be released to the importer.

Sincerely,

Steven I. Pinter

[redacted]

Dear [redacted]

This is in reply to your letter of June 1, 1984, requesting approval for a proposed country of origin marking of sweet meats from West Germany.

The wrappers of the subject imported sweet meats will indicate the address of the manufacturer and no other address. The address that does appear will indicate "West Germany" as part of the address. You inquire whether this marking will satisfy the country of origin marking requirements.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires that, unless excepted, every article of foreign origin or its container must be legibly, permanently and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

In this case, the product wrapping (container) will reach the ultimate purchaser in the United States. The wrapping will contain the country of origin, West Germany, as part of the foreign manufacturer's address. This country of origin appears to be legible, permanent and conspicuous. It is not lost in the foreign street address, but rather appears on a separate line.

We believe that the subject marking reasonably indicates the country of origin to an ultimate purchaser in the United States. We therefore find such marking to satisfy the requirements of 19 U.S.C. 1304.

Sincerely,

(Signed) Darrell D. Kast

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: MAR 18 1986

FILE: ENT-1 CO:R:E:E
725570 JL

TO : District Director of Customs
Detroit, Michigan

FROM : Chief, Entry, Licensing and
Restricted Merchandise Branch

SUBJECT: Protest and Application for Further Review No. 3802-3000321, November 23, 1983, F.W. Meyers & Company Inc.

This protest is to the refusal of the port director at Port Huron to allow reliquidation of a consumption entry pursuant to 19 U.S.C. 1520(c)(1). The protestant, a broker acting as importer of record for the account of an export company in Brownsville, Texas, claims that due to a clerical error a consumption entry was filed when in fact the shipment was immediately destined to Mexico and should have been entered under a transportation and exportation entry. The submitted evidence consists of a copy of an actual factory invoice from the shipper which shows the destination of the merchandise as a company in Mexico and a copy of a Mexican railway bill of lading which references the Mexican landing certificate and registration certificate.

Your office's Customs Form 6445 forwarded with the file states that your position is "failure to file a T&E entry at the time of release was an error on the part of the broker." A memorandum in the file from the port director to the Regional Protest Review officer states as follows:

> This merchandise was cleared and released from Customs custody and controlled at the time of entry. The broker failed to request that a T&E entry be made at the time of release. It is impossible to account for this merchandise after its release from Customs control. A refund of duty cannot be allowed on the alleged basis that it should have been a T&E entry originally. Note also that the date of release is June 14, 1983. The first 520 request is dated September 16, 1983. A period of over 2 months passed before correction of the alleged error was requested.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E1

The Regional Protest Reviewer made reference to Customs Directive No. 3280-01 of November 25, 1983, noting that the directive states that "penalty action will still be taken for any breach of bond." The C.I.E. neglected to comment on the protest.

In those cases where goods which were intended to be entered under a T&E entry are mistakenly or inadvertently entered under a consumption entry, the Customs policy of granting relief under section 520(c)(1) of the Tariff Act in appropriate cases is well established, even though the goods were not exported under Customs supervision or other technical requirements pertaining to T&E entries were not complied with. We note that in the body of the protest Customs Form 19 reference is made to an error on the part of a Grand Trunk Line Railroad employee "who mistakenly requested release against our bond and the U.S. Customs inspecting officer whom (sic.) released the shipment looked closer at the proforma invoice accompanying the merchandise." We think it clear from the documentation submitted with the protest that it was intended that the merchandise be immediately transported to Mexico under a T&E entry instead of a consumption entry having been filed. 19 U.S.C. 1520(c)(1) allows for the correction of an error in a Customs transaction provided it is manifest from the record and is not an error in the construction of a law. Inasmuch as neither the port director nor any reviewing officer had any problem with the documentation submitted in support of the protest, it is our opinion that the petition for relief should have been allowed.

The remarks of the port director in his memorandum of January 11, 1984, require additional comment. The port director noted that a period of over two months had passed before correction of the error was requested under section 1520(c)(1). We are amazed by this observation inasmuch as the statute specifically allows a petition for relief to be filed as many as 12 months from the date of liquidation of the entry. The port director also stated that it was "impossible to account for this merchandise after its release from Customs control." It is difficult to imagine any use of section 1520 being made by the importing public if Customs requires that all errors be corrected when the merchandise is in Customs custody.

You are hereby directed to allow the protest in full.

Steven I. Pinter

Dear Miss

This concerns the recordation with the U.S. Customs Service of the trademark "GUCCI," No. 1,007,216, in the name of Gucci Shops, Inc.

The trademark was recorded with Customs in error because we overlooked the fact that the trademark is registered in the United States Patent and Trademark Office on the Supplemental Register.

Section 1096, title 15, United States Code (section 28 of the Tariff Act of 1946) provides that "Registration on the Supplemental Register...shall not be filed in the Department of the Treasury or be used to stop importations."

A refund of the $190 fee submitted with your letter of application of February 7, 1980, is returned.

Sincerely,

Darrell D. Kast
Chief, Entry, Licensing and
Restricted Merchandise Branch

Dear [redacted]

This is in reply to your letter of August 31, 1984, concerning the country of origin marking requirements applicable to a soccer ball hand-stitched in either Mexico or Brazil from pre-cut synthetic leather material from either Denmark or Germany.

According to your letter, pre-cut components for a soccer ball will originate in either Denmark or Germany. The bladder for the soccer ball will also originate in Europe. The assembly, however, will be accomplished in either Mexico or Brazil and will represent between 20-30 percent of the total value of the product.

In the absence of more precise information, we are unable to give you definite advice. However, you should note that Customs has recently taken the position that, in the case of textile products, the assembly or sewing together of otherwise completed component parts does not substantially transform those parts for the purposes of determining the country of origin. See section 12.130, Customs Regulations (interim), published in the Federal Register on August 3, 1984 (49 FR 31248) (copy enclosed). Country of origin marking requirements under 19 U.S.C. 1304 will likewise be affected. Therefore, in the case of textiles, the country of origin of a finished garment may not be the country where the component parts are assembled or sewn together, but rather the country from which the component parts are sourced.

Applying the foregoing principles at the case at hand, it is possible that the country of origin of the finished soccer ball will not be either Mexico or Brazil (where the assembly takes place), but rather the country from which the completed components are produced. If all the completed components, including the bladder, are produced in Denmark and merely assembled in Mexico, then it is likely that the country of origin of the finished soccer ball will be considered to be Denmark for marking purposes under 19 U.S.C. 1304. Under these circumstances, the soccer ball may be marked "Made in Denmark." Using the enclosed regulations as a guide, we recommend that you contact local Customs officials at the prospective port of entry and submit more precise cost information and sourcing data.

Sincerely,

E4

[redacted]

Dear [redacted]

Your December 18, 1984 letter, and February 20, 1985 supplement, concerned the application of the country of origin marking requirements to furniture components imported into the United States.

According to your letter, the components are purchased from suppliers in various countries. Each is packaged in a box which is marked with the country in which the component was manufactured. Each component remains in the box until it is purchased, taken home by the purchaser, and assembled with other components to form a piece of furniture.

When the potential purchaser goes to the retail outlet, he views a finished model which shows how the piece of furniture looks once it is assembled from the components which are removed from their boxes. These boxes are on the same floor as the model and will be brought to the purchaser prior to completion of the purchase. They are illustrated with a representation of the component and the piece of furniture which is formed by the combination of that component with others. According to your letter, the placement of these boxes on the same floor as the model and the presentation of them to the purchaser prior to completion of the sale accords the purchaser the country of origin notice required by the statute. This method, according to your letter, is necessary to avoid confusing the customer, which could violate requirements enforced by the Federal Trade Commission.

19 U.S.C. 1304 states in part, that, "...every article of foreign origin (or its container, as provided in subsection (b) hereof) imported into the United States shall be marked in a conspicuous place as legibly, indelibly, and permanently as the nature of the article (or container) will permit...." Subsection b, entitled, "Marking of containers" applies to articles which are excepted from individual marking by 19 U.S.C. 1304

727139

ES

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(a)(3). 19 U.S.C. 1304 (a)(3) lists several instances in which an exception from individual country of origin marking of an article may be granted. You have referred to exception (a)(3)(D). This exception is for articles in which "The marking of a container of such article will reasonably indicate the origin of such article".

19 U.S.C. 1304 is intended to inform the ultimate purchaser of the country of origin of the article. In this way the purchaser has the opportunity to make an informed decision as to whether to purchase United States articles or articles produced in a foreign country.

We believe that the marking of the individual containers which house each component informs the ultimate purchaser as to the country of origin of that component, and this information is provided to the ultimate purchaser early enough to allow the purchaser to make an informed decision. For that reason, the display article does not have to be marked.

Sincerely,

Steven I. Pinter

The Honorable
Solomon P. Ortiz
Member of Congress
3649 Leopard
Corpus Christi, Texas 78408

Dear Mr. Ortiz:

A copy of your letter to [redacted] has been referred to us by [redacted] because it concerns country of origin marking pursuant to 19 U.S.C. 1304. Your letter on behalf of the [redacted] raised the issue of the proper marking of shrimp which has been imported, frozen, and packed in containers which have not been marked to indicate that the shrimp is a product of Mexico.

We have informed the District Director in Laredo, Texas that the freezing of this shrimp does not make the shrimp a product of the United States. The container in which the shrimp is packaged and sold to the retail purchaser must be marked so as to indicate that the shrimp is a product of Mexico.

We trust that this is satisfactory to you. If we can be of any further assistance, please do not hesitate to contact us.

Sincerely,

(Signed) John Simpson

[redacted]

Dear [redacted]

This refers to your letter of September 20, 1984, to the Area Director of Customs in New York concerning the importation of steel products into the United States under item 832.00, Tariff Schedules of the United States (TSUS) for the Department of Defense. Your letter was referred to this office for reply by the Area Director, New York Seaport.

You asked whether items sold to the Department of Defense can be imported duty-free under item 832.00 as long as the tariff number is specified in the Department of Defense contract or purchase order. This is correct as long as certain special additional procedures are complied with by importers, which for the most part consist of the importer submitting the original shipping documents to the Defense Contract Administration Services Region in New York (DCASR) which will issue a duty-free certificate if the importation qualifies under the contract. The importer then has 6-months to submit to Customs the original duty-free entry certificate. Detailed instructions can be obtained from Customs at the port of importation.

You next asked if the supplemental Presidential duty, such as is now as being imposed on stainless sheet and strip, would also be applied to importations under item 832.00 TSUS. The supplemental duties imposed under Presidential Proclamation 5074 on certain stainless or alloyed tool steel or round wire of high speed tool steel would be applicable to importations under item 832.00 TSUS.

You asked whether dumping duties would apply on these products if imported under item 832.00 TSUS. Countervailing and/or antidumping duties are not collected on entries made under 832.00 TSUS, provided all applicable procedures are complied with and the duty-free certificate is timely-furnished.

727961

E8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Regarding the applicability of the [redacted] arrangement for certain steel products which generally provide for the production of an [redacted] certificate upon entry, the International Trade Administration advises that the certificate would not be required provided the entry is sustained under item 832.00 TSUS.

You asked if other "quota's such as those imposed by the President for stainless bars and rods would apply to purchases for the Department of Defense."

The aforementioned stainless bars and rods are, pursuant to Presidential Proclamation 5074, subject to quantitative limitations on their importation into the United States when entered under item 832.00 TSUS. However, it is not possible to categorically state that all importations under item 832.00 TSUS will be subject to quota limitations because each quota, whether it be promulgated by Presidential Proclamation or tariff schedule enactment by the Congress, is a unique provision often varying in its terms from other quota provisions, even covering the same merchandise.

Any further information should be requested from the Area Director of Customs office, New York Seaport, which is being provided with a copy of this letter.

Sincerely,

Steven I. Pinter

APR 29 1985

Harvey A. Isaacs, Esq.
Customs Counsel
National Customs Brokers & Forwarders
Associaton of America, Inc.
One World Trade Center
New York, N.Y. 10048

Dear Mr. Isaacs:

This refers to your letter of April 1, 1985, concerning Customhouse Brokers pipeline No. 82-3 issued by the District Director of Customs in Chicago on the subject of petitions submitted to Customs pursuant to section 520 of the Tariff Act of 1930.

The pipeline stated that effective December 15, 1984, petitions submitted to Customs to correct a clerical error, mistake of fact, or other inadvertence will not be accepted if they are submitted prior to liquidation. You state that it is your belief that the document is as a matter of law erroneous in certain respects and contrary to sound Customs policy and should be revoked or amended.

Your first point is that the pipeline does not take into account 19 U.S.C. 1520(a)(4) which was added by section 210(7)(B) of the Trade and Tariff Act of 1984, Public Law 98-573. Your second point is that an importer or broker should be free to communicate with Customs on any matter pertaining to an entry prior to its liquidation, and that responsible Customs officials have a legal duty to ensure that a liquidation accords with the true facts and circumstances.

Regarding your first point, we agree that the amendment to 19 U.S.C. 1520 effected by Public Law 98-573 authorizes a refund of duties when a clerical error, mistake of fact, inadvertence etc., is brought to Customs attention prior to liquidation of an entry. Regarding your second point, it has been Customs policy for more than 20 years that a clerical

E10

error called to our attention prior to liquidation should be corrected in liquidation. If the error is overlooked in liquidation, then it will be corrected pursuant to 19 U.S.C. 1520 on the strength of the notice given before liquidation.

We are today furnishing a copy of this letter to the District Director of Customs at Chicago for appropriate action.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and
Restricted Merchandise Branch

JUN 05 1985

Mr. Douglas Chan
Gerber Systems (USA) Inc.
Post Office Box 431
Honolulu, Hawaii 96809

Dear Mr. Chan:

This is in reply to your letter dated April 25, 1985, concerning country of origin marking on certain foreign made guest room amenities which you supply to various hotels. You request advice on whether it would be acceptable to mark the inner carton and shipping carton rather than the product itself. You state that the hotels feel that the country of origin marking detracts from the design of the products.

The products in question include bottle openers, cotton swabs, playing cards, soap, and numerous other guest room amenities. The hotels provide these items within their rooms for the convenience of the guest. You state that none of the items are sold at retail. A few samples and photographs have been submitted.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) provides that all articles of foreign origin imported into the United States are required to be legibly, conspicuously, and permanently marked to indicate the country of origin <u>to an ultimate purchaser in the United States</u> (emphasis added). The ultimate purchaser is generally the last person in the United States who will receive the article in the form in which it was imported. 19 CFR 134.1(d). If the imported article is distributed as a gift the recipient is the ultimate purchaser. 19 CFR 134.1(d)(4).

In accordance with the above provisions, we find that the ultimate purchaser in this case is the hotel guest. Your proposed method of marking would not indicate the country of origin to the ultimate purchaser and is therefore not acceptable. In order to satisfy the statutory requirements, each of the items in question must be individually marked with the country of origin. To avoid damage to the finish of the leather caused by a gummed label, the leather case may be permanently engraved with country of origin marking at the time of manufacture.

E12

C11827

In summary, due to the fact that the hotel guest rather than the hotel is the ultimate purchaser, we cannot grant an exemption from individually marking each of the imported items.

Sincerely,

Steven I. Pinter

Steven I. Pinter

E13

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

NOV 05 1985

REFER TO

MAR-3 CO:R:E:E
728693 LR

This ruling concerns the country of origin marking requirements applicable to imported rough forge fittings of carbon steel which will be further processed in the United States.

ISSUES:

1. Does the placement of the country of origin at the edge of the article in such manner that it will be removed during manufacture satisfy the requirements of 19 U.S.C. 1304, as amended?

2. Are the country of origin markings on the subject forgings legible and conspicuous enough to satisfy the requirements of 19 U.S.C. 1304, as amended?

FACTS:

A company imports rough forged fittings of carbon steel ("forgings") and further processes them into finished pipe fittings ("fittings") in the form of elbows or tees. (Elbows are two outlet fittings with a 90 degree bend in the pipe, and tees are T-shaped fittings with three outlets.) The further processing includes:

(1) Shot blasting - Rough forgings are cleaned of oxidation and mill scale from the exterior and interior surfaces;

(2) Machine bevelling, boring and tapering - Edges of forgings are cut off, ends are bevelled to ANSI B16.9 length dimensions and inside diameters are bored and tapered to ANSI B16.9 tolerances;

(3) Grinding - Machined forgings are ground to remove surface imperfections resulting from forging or machining processes, per ASTM A234 specifications;

(4) Die stamping - Processed forgings are stamped with an identification of each heat lot number, parent material, size and wall thickness, per ASTM 234 specifications;

728693

E14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(5) Inspecting - Processed forgings are inspected for forging and machining flaws and surface defects, as well as thickness, length dimensions and inside and outside diameter tolerances per ASTM A234 and ANSI B16.9 specifications;

(6) Painting - Processed forgings are painted in a dip tank with an emulsion dipping primer as a protective coating;

(7) Certain elbows also undergo a hot forming process prior to bevelling which involves heating the rough forgings and compressing one end to reduce its size and diameter.

The word "Japan" is die stamped close to the edge of the forgings in letters approximately 1/16 inch tall. The clarity and distinctiveness of the letters varies. The processing performed by the importer will substantially or completely obliterate the country of origin markings.

LAW AND ANALYSIS:

I

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) provides that all articles of foreign origin imported into the United States are required to be legibly, conspicuously, and permanently marked in such manner so as to indicate the country of origin to an ultimate purchaser in the United States (emphasis added).

The ultimate purchaser is generally the last person in the United States who will receive the article in the form in which it was imported. 19 CFR 134.1(d). If an imported article will be used in manufacture, the manufacturer may be the "ultimate purchaser" if he subjects the imported article to a process which results in a substantial transformation of the article; however, if the manufacturing process is merely a minor one which leaves the identity of the imported article intact, the consumer or user of the article after the processing, will be regarded as the "ultimate purchaser." 19 CFR 134.1(d)(1)&(2).

Under the above principles, if the manufacturer/importer is the ultimate purchaser of an imported article which is legibly and conspicuously marked at the time of importation, the article will be found to be legally marked even if such marking will be removed during the subsequent manufacture.

728693

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

In Midwood Industries, Inc. v. United States, 64 Cust. Ct. 499, C.D. 4026, 313 F. Supp. 951 (1970) the United States Customs Court considered the legal sufficiency of the country of origin marking on certain imported forgings subject to further processing. (the edges are cut off, the ends are bored, tapered and bevelled, die lines and other surface imperfections are removed, and the fitting is cleaned for the removal of oxidation and mill scale from the outer surface). Although the edges of the forgings were legibly and conspicuously marked at the time of importation, such marking would be obliterated or destroyed during the course of this processing. The Court found that the marking was sufficient because the processing substantially transformed the imported forgings making the processor the ultimate purchaser of the imported merchandise.

In this case, the imported forgings are processed in the same manner as the imported forgings in Midwood. As such, we find that the processing in this case similarly constitutes a substantial transformation and that the importer/processor is the ultimate purchaser of the imported merchandise. The question remains, however, whether the conclusion reached in Midwood i.e. that the imported steel forgings were properly marked, is controlling in light of the recent amendment to the marking statute pertaining to the marking of steel pipe fittings. Section 207 of the Tariff and Trade Act of 1984 (19 U.S.C. 1304(c)) states:

> No exception may be made under subsection (a)(3) of this section with respect to pipes of iron, steel, or stainless steel, to pipe fittings of steel, stainless steel, chrome-moly steel, or cast and malleable iron each of which shall be marked with the English name of the country of origin by means of die stamping, cast-in-mold lettering, etching, or engraving (emphasis added).

We are of the opinion that the recent amendment would not effect the outcome in Midwood. The new law states only that no exception may be made under subsection (a)(3) of this section, i.e. 19 U.S.C. 1304(a)(3). 1/ It does not alter the statutory

1/This provision allows the Secretary of the Treasury in particular circumstances to authorize an exception from the requirements of marking. For example, 19 U.S.C. 1304(a)(3)(D) states that an exception may be authorized if the marking of the container will reasonably indicate the origin; (a)(3)(H) states that an exception may be authorized if an ultimate purchaser, by reason of the character of such article or by reason of the circumstances of its importation, must necessarily know the country of origin of such article even though it is not marked to indicate its origin.

F2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

728693

requirement that the imported article be marked to indicate the country of origin to the ultimate purchaser. In Midwood, the Court did not apply an (a)(3) exception to reach the conclusion that the marking on the outer edge of the forging was sufficient. It based its determination on the finding that the manufacturer rather than the consumer was the ultimate purchaser of the imported articles. Therefore, the case is still controlling.

Based on Midwood, we conclude that the marking of the forgings on their outer edge is sufficient provided that such marking is legible and conspicuous.

II

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C 1304), requires that every article of foreign origin be marked legibly, permanently, and conspicuously to indicate the name of the country of origin to the ultimate purchaser in the United States (emphasis added). Section 134.41(b) of the Customs Regulations (19 CFR 134.41(b) interprets these requirements to mean that the ultimate purchaser in the United States must be able to find the marking easily and read it without strain.

In this case, four representative sample forgings were submitted. Each one is die-stamped "JAPAN" in letters measuring approximately 1/16 inches tall marked near an outer edge. The samples include three 90 degree elbows (the outer diameters measuring 1-5/16 inches; 2-3/8 inches; and 2-7/16 inches) and one tee (2-3/8 inches outer diameter). The elbows have a fairly smooth dark finish whereas the finish on the tee is lighter and rougher.

We find that the placement of the country of origin marking at the edge of each of the samples is conspicuous. This is the same location of the country of origin marking on the forgings in Midwood which the court approved.

Counsel argues that legibility cannot be an issue in connection with imports by an ultimate purchaser if the underlying intent of the marking statute (i.e. to inform an ultimate purchaser of origin) is given proper consideration. In the alternative, counsel argues that if legibly marking is required, the standard of legibility should be relaxed. The basis for this argument is that importer/ultimate purchaser of the forgings would be more discerning of country of origin markings than an ordinary purchaser.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

We disagree with counsel's contention that legibility cannot be at issue here. Section 19 U.S.C. 1304(a) requires legible marking and no exceptions are authorized. Therefore, where an article is required to be marked, such marking must be legible. As a practical matter, legibility is not usually an issue where the importer is the ultimate purchaser because in such cases an exception from marking is often applicable. In the case of the subject merchandise, however, the new law permits no exceptions from marking. This includes situations where the importer is the ultimate purchaser. Accordingly, we conclude that the country of origin marking must be legible.

We also do not agree with counsel's suggestion that legibility standards should be less strict in cases where the importer is the ultimate purchaser. As indicated above, the basic test to determine legibility is whether the ultimate purchaser can read the country of origin marking without strain. If any lesser standard was applied, the legibility requirement would be meaningless.

Upon examination of the samples, we find that only two of the samples (the tee and the largest elbow) are legibly marked with the country of origin. Both of these items are marked with distinct, well-formed letters. In addition, the letters on the tee are somewhat larger that the letters on the other samples. We believe that the ultimate purchaser would be able to read the country of origin on both these articles without strain. This is not true in the case of the two smaller elbows. Although these articles are marked in the same size letters as the largest elbow, the letters are not as distinct or well-formed. They readily blend in with the background and are hard to decipher. They cannot be considered legible.

HOLDING:

1. The imported forgings may be marked with the country of origin on an outer edge of the forging even though the marking will be obliterated during further manufacture.

2. Two of the submitted samples, the tee and the largest elbow are legibly marked with the country of origin within the meaning of section 1304 and 19 CFR 134.41(b). The other two samples are not.

J. Sircy
President
Simko International Inc.
P.O. Box 1218
Liburn, Georgia 30247

Dear Mr. Sircy:

This is in response to your letter concerning the importation of canned grapefruit sections from Israel. You would like to bring in unlabeled cans which are stamped only with the manufacturer's code numbers and date and apply labels with country of origin, ingredients, weight, etc. in the United States. The cans would be imported either in bulk in cases or on pallets.

The above procedures would not satisfy the requirements of section 304 of the Tariff Act of 1930, as amended, which generally requires that imported merchandise be marked with its country of origin at the time of importation. The requirements of this statute would be met if the cans were individually stamped with the country of origin prior to importation and the labels (with country of origin) were applied after importation. We suggest that you contact the Food and Drug Administration to ascertain whether these procedures are in conformity with other food labeling laws.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and

Old San Juan, Puerto Rico 00903

Dear Sir:

This is in response to your inquiry regarding possible trademark and copyright infringement in the importation of certain video cassette tapes.

The items under consideration are video cassette tapes entitled "LOS PITUFOS", which means "THE SMURFS" in English, and bearing a stylized design of a "W".

Warner Communications, Inc., a Delaware corporation located at 75 Rockefeller Plaza, New York, New York, 10019, is the owner of a trademark (Registration No. 1,061,551) in the form of a "W" logo for phonograph records and prerecorded tapes. The mark has been recorded with Customs for import protection against infringing goods.

It is clear that the "W" design, as applied to the goods so resembles the recorded "W" logo, as to be likely to cause confusion, or mistake, or to deceive as to the origin or source of the goods. The marks are similar in meaning and appearance: both comprise the single letter "W" in only slightly differing forms. As for the goods, it is obvious that a close relationship exists between video cassette tapes and phonograph records on the one hand, and prerecorded tapes on the other. These goods are used together in the display and dissemination of information and they may be purchased together at department stores and home entertainment centers. Indeed, they are merely different mediums of communication.

The importation of the items in question constitutes an infringement on the rights of the trademark owner, Warner Communications, Inc., subject to the restrictions of sections 133.21 through 133.23 of the Customs regulations, and should be detained.

F6

T[illegible]T MAY BE RELEASED TO THE
P[illegible]

Pierre Culliford d/b/a Peyo, located in Brussels, Belgium, is the owner of several copyright registrations (Nos. VA 21-052, VA 28-528, VA 34-464, VA 58-046, VA 69-524, and VA 76-267) for dolls, commonly called "SMURFS." All of these registrations have been recorded with Customs for import protection.

Examination of the subject matter of the imported cassette tapes reveals a substantial similarity to the copyrighted "SMURF" dolls. It is obvious that the characters depicted in the imported tapes are merely the "SMURFS" in animated form. The characters bear all of the essential features of the protected items such as the wide eyes, prominant bulbous nose, large smile, protruding ears and the other unique facial features, the oversized peaked hat, and the contrasting colors employed on the face, hat and clothing of each doll.

The right to copy embraces not only the work as a whole, but also its copyrightable contents. This right extends to imitations and reproductions in other forms of media. A doll copied from a cartoon may be deemed an infringing copy. See Fleischer Studios Inc. v. Freundlich Inc., 73 F.2d 276 (2d Cir. 1934).

It appears that the importer has merely transformed the copyrighted work, a three-dimensional character in the form of a doll, into another medium, a two-dimensional video tape. As such, the imported items constitute an infringement upon the rights of the copyright owner.

Therefore, the imported items are infringing importations and subject to seizure and forfeiture under 17 U.S.C. 603 and sections 133.42, 133.51 and 133.52 of the Customs Regulations. This office has no objection to the exportation of the items under 17 U.S.C. 603(c).

Sincerely,

Steven I. Pinter

13 DEC

ENT-1 CO:R:E:E
728811 JL

Richard M. Belanger, Esq.
Sharretts, Paley, Carter & Blauvelt, P.C.
1101 Connecticut Avenue, N.W.
Washington, D.C. 20036

Dear Mr. Belanger:

This refers to your request for a ruling dated August 16, 1985, on behalf of your client, Kenner Products Company.

Your request is that merchandise shipped from a beneficiary developing country in bond to Mexico for repacking under the Maquiladora program and then exported into the United States would be considered "Imported into the Customs territory of the United States directly from" the beneficiary developing country for purposes of the Generalized System of Preferences (GSP).

Initially your firm requested this ruling in letters dated February 24, and March 3, 1983 (Case No. 722632). On November 1, 1984, the request was withdrawn pursuant to section 177.6, Customs Regulations.

We understand the facts to be that Kenner Products will import certain goods (probably toys or games) into the United States from a designated beneficiary developing country under the GSP program. We understand that the merchandise will not be entered for consumption but will be transported in Customs bond to Mexico for repacking and subsequent return to the United States. While in Mexico the goods will be under bond pursuant to the Maquiladora program which allows them to be imported free of duty for processing and exportation. It is your position that your client's goods handled in this fashion should be considered as having been imported directly from the beneficiary country pursuant to section 10.175, Customs Regulations.

Section 10.175, Customs Regulations, entitled "Imported Directly Defined", states in subsection (c) as follows:

> If shipped from a beneficiary developing country to the U.S. through a free trade zone and beneiciary developing country, the merchandise shall not enter into the commerce of the country maintaining the free trade zone, and (1) the eligible articles must not undergo operations other than:

<8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

(i) sorting, grading, or testing

(ii) packing, unpacking, changes of packing, decanting or repacking into other containers, ...

Subsection (4) states the certifying authority of a designated beneficiary developing country maintaining the free trade zone shall issue a certificate of origin form A, declaring what operations were performed within the zone and that the original certificate issued in the beneficiary developing country of origin shall be retained by the designated authority in the country maintaining the free trade zone, with a copy being furnished to the U.S. importer. Subsection (5) provides as follows:

> For the purposes of this section, a free trade zone is a predetermined area or region declared and secured by or under governmental authority, where certain operations may be performed with respect to articles, without such articles having entered into the commerce of the country maintaining the free trade zone;...

It is your position that the handling of goods under the Maquiladora program constitutes a free trade zone within the meaning of subsection (c)(5) of section 10.175 of the Customs Regulations. In support of this proposition you have furnished a copy of an official letter dated March 26, 1985, issued by the federal delegation in the state of Baja California of the Ministry of Commerce and Industrial Development of the Government of Mexico and a translation of the sections of the decree for the development and operation for Maquiladora industry for exportation. Also furnished with your first request for ruling of July 12, 1983, was a document entitled, "Mexico: Inbond Industry," which explains the system.

Under the Maquiladora program approved manufacturing or processing plants are set up within specific geographical zones. Materials, goods, and machinery in these plants are not subject to Customs duties by the Mexican authorities. The bonds secure the government against unauthorized entry into Mexican commerce of the above described items as well as the imported merchandise which is to be processed for exportation. Goods produced in these plants may be entered into consumption in Mexico upon payment of duties and taxes under certain conditions. Imported raw materials, parts, or components must be exported after 6 months, but this may be extended to 12 months.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

728811

Machinery and equipment imported to be used in the plants are allowed to stay as long as the program for which they were approved is in effect. No taxes or duties are paid on the "temporary importations" but the bond that is given must ensure their exportation. Among the various restrictions placed upon the products of these plants is that they cannot be withdrawn for consumption if they compete with similar products manufactured in Mexico.

After careful consideration of all the materials presented, we are of the opinion that the in bond plants maintained under Mexican law as the Maquiladora program qualify as free trade zones within the meaning of section 10.175 (c), Customs Regulations. We are also of the opinion under the factual situation presented, that is, that the goods are shipped to the United States directly from a designated beneficiary developing country, are never released from Customs custody, are entered for transportation in bond and exportation to Mexico for repacking in an in bond plant under the Maquiladora program, and are subsequently imported into the United States, the goods will be considered as being imported directly from the designated beneficiary developing country of origin. Of course this treatment will be dependent upon proper documentation being provided to the district director of Customs at the port of entry.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and

WASHINGTON

MAR 12 1986

REFER TO

CPR-3 CO:R:E:E
728861 KM

District Director of Customs
909 First Avenue
Seattle, Washington 98174

Dear Sir:

This is in response to your request for an advisory opinion on possible copyright infringement regarding imported clip-on dolls (District Case No. 85-3001-00236).

Original Appalachian Artworks, Inc., the owner of a registered copyright entitled "THE LITTLE PEOPLE SOFT SCULPTURE-STYLE BALD," (Reg. VA 35-804), commonly called "CABBAGE PATCH DOLLS," has recorded its registration with U.S. Customs for import protection.

The items under consideration for alleged copyright infringement are 1,920 dozen "LITTLE CUTIE" clip-on dolls, approximately 3 3/8 inches in height. The goods are manufactured in Taiwan and imported by Pay'n Save Corporation. The clip-on dolls appear to be made of plastic, some having yarn hair while others are bald. They are dressed in typical children's clothing such as dresses and pants with suspenders. The dolls have plastic molded faces and arms which extend in front with palms together to allow the dolls to be clipped onto various things.

These "LITTLE CUTIE" clip-on dolls are believed to be substantially similar to the protected CABBAGE PATCH DOLLS. The fact that the imported items are smaller than the CABBAGE PATCH DOLLS or have other slight variations in construction and style, do not obviate against a conclusion of copying. There is still a substantial similarity to the unique facial features which are present in the CABBAGE PATCH DOLL, in particular, the tri-partite nose, the receding chin, and the contours of the mouth and cheeks. All of these features which appear on the imported items capture the essence of the CABBAGE PATCH DOLL.

The test for substantial similarity of copyrighted items is whether an ordinary observer who is not attempting to discover disparities between two articles would be disposed to overlook them and regard their aesthetic appeal as the same, Peter Pan Fabrics, Inc. v. Martin Weiner Corp., 274 F. 2d 487 (1960), or

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F11

whether an average lay observer would recognize the alleged copy as having been appropriated from the copyrighted work, Ideal Toy Corp. v. Fab-Lu Ltd., 360 F.2d 1022 (1966).

Therefore, the imported items are infringing importations and subject to seizure and forfeiture under 17 U.S.C. 603 and sections 133.42, 133.51 and 133.52 of the Customs Regulations. This office has no objection to the exportation of the clip-on dolls under 17 U.S.C. 603(c).

Sincerely,

Steven I. Pinter

S. M. Mims, Esq.
Texas Instruments Inc.
Box 225474
Dallas, Texas 75265

Dear Mr. Mims:

This is in response to your letter dated October 29, 1985, regarding the country of origin marking of integrated circuits from the Philippines. Specifically, you ask whether the marking on the submitted samples satisfies the requirements of 19 U.S.C. 1304.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires that every article of foreign origin be marked legibly, permanently, and conspicuously to indicate the name of the country of origin to the ultimate purchaser in the United States. The marking will be considered legible if the ultimate purchaser in the United States is able to read it without strain. See Section 134.41(b), Customs Regulations.

In this case, the flat surface of the encapsulated portion of the submitted integrated circuit measures approximately 3/4 inches by 1/4 inches. Each sample is marked "Philippines" in small black letters on the shiny circular area in the center of the flat surface. The circumference of the circular area is approximately 1/8 inch and the word "Philippines" appears in a circular fashion around the inside portion of the circle. You indicate that the letters are produced by the "knock-out" punches used to separate the molded integrated circuits from a mold and die after the plastic encapsulation operations.

In this case, the country of origin marking cannot be considered legible. First, notwithstanding that the letters of the word "Philippines" are well-formed, they cannot be read without strain (in order to fit within the circular area, they are very small; they readily blend into the black background; and, the samples must be held up to the light in order to decipher the marking). Moreover, the flat surface of the encapsulated portion of each integrated circuit is sufficiently large to accommodate more legible marking. In such circumstances, we find that the marking on the submitted samples is not legible.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F13

Based on our determination that the marking of the samples is not easy to read and that the size of the articles is sufficiently large to accommodate more legible marking, we are of the opinion that the samples do not meet the requirements of 19 U.S.C. 1304.

Sincerely,

Steven I. Pinter

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: MAR 21 1986

FILE: ENT-1 CO:R:E:E
729155 JL

TO : Chief, Customs Information Exchange
New York, New York 11430

FROM : Director, Entry Procedures and Penalties Division

SUBJECT: Difference of Opinion on Custom Form 6431, Blaine, Washington, dated August 6, 1985, Entry No. 85-227579-5

The report was submitted to this office for resolution in accordance with Manual Supplement No. 2126-01(D)(3).

The merchandise involved was a Deluxe Travel Trailer sold by a U.S. company to a resident in Seattle. The resident drove to Canada to pick up the trailer. One Customs officer would apply the lower rate of 4.4 percent to the entire value of the importation, whereas the other Customs officer would apply the flat rate of 10% on the first 2 thousand dollars of the value of the merchandise pursuant to item 869.00 TSUS on the authority of Headquarters ruling 720164.

Item 869.00 TSUS provides for a flat rate of duty of 10% of the fair retail value of articles for personal or household use, or as bona fide gifts, not imported for the account of another person valued in the aggregate at not over $1,000 fair retail value in the country of acquisition , "if the person claiming the benefit of items 869.00 or 869.10, or both, has not received the benefits thereof within the 30 days immediately preceding his arrival; ...". Item 869.10 TSUS provides for a 5 percent flat rate of duty on the fair retail value of such articles, with some slight differences, when acquired in certain insular possessions. The headnote to Part 6, Schedule 8, TSUS, provides as follows:

> For the purposes of this part the rates of duty for articles provided in this part shall be assessed in lieu of any other rates of duty except free rates of duty on such articles, unless the Secretary of the Treasury or his delegate determines, in accordance with regulations, that the application of the rate of duty provided in this part to any article in lieu of the rate of duty otherwise applicable thereto adversely affects the economic interest of the United States.

G'

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The procedure for excluding articles from the flat rate of duty is set out in section 148.105, Customs Regulations, and the list of excluded articles is provided in section 148.106. As of this date, no articles have been found to affect the economic interest of the United States adversely so as to be excluded from the application of the flat rate of duty provisions.

Headquarters ruling 720164 revoked ruling 717605 and concluded, among other things, that "the application of the flat rate of duty provision is mandatory." In ruling 720164 an importer travelled to Canada solely for the purpose of taking delivery of a yacht. When he imported it into the United States the 10 percent flat rate of duty was applied to the first 600 dollars of the purchase price. The importer contended that the yacht should have been dutiable upon its entire value at 4.1 percent pursuant to item 696.10 TSUS. On page 3 of the ruling there is a discussion of the legislative history and the statement is made that item 869.00 was enacted "... to reduce delays and bottlenecks in clearance of travelers at ports of entry." Statement was made that the provision was not instituted to provide a lower rate of duty for goods accompanying a traveler and that the benefit accorded to the traveler was the expedited clearance of his goods "without having to wait for the Customs inspector to calculate the various duty rates for the different items acquired." From this the conclusion was reached that," therefore, this provision is mandatory, not discretionary."

Section 148.101, Customs Regulations, applies the flat rate of duty provisions and gives examples. It states that "each person, ..., arriving in the United States who enters articles for his personal or household use, ..., valued in the aggregate at not over $600 fair retail value in the country of acquisition, shall be assessed a flat rate of duty on the articles,..". It also states that "except as provided in section 148.105, the flat rate of duty shall be assessed in place of rates of duty other than free rates of duty." It further states "if the dutiable amount of the article(s) is over $600 fair retail value, the flat rate of duty provisions shall apply to the amount not over $600 fair retail value, and the excess amount shall be valued under section 402 or 402(a), tariff act of 1930, as amended ... ." Next it states that "the article(s) shall be classified under the appropriate item number of the tariff schedules.

729155

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

62

Two examples of the application of the subpart are set forth in section 148.101 and in both cases the merchandise acquired by the traveler had a fair retail value exceeding the traveler's personal exemption, even after the non-dutiable items were eliminated. The technique employed in calculating the duty involves first separating the amount of the personal exemption, next taking out articles which carry a free rate of duty, then applying the 10 percent flat rate of duty to the personal exemption amount, and finally subjecting the balance of the articles to duty at rates other than the flat rate. The problem with this calculation insofar as it relates to the facts of the instant case and those in ruling 720164 is that if the purpose of the flat rate of duty calculation is to reduce the number of calculations that the Customs inspector makes in processing the entry of merchandise by a traveler, the procedure in section 148.101 of the regulations and that condoned in ruling 720164 result in the calculation of two rates of duty on one article. Further, since the purpose of the enactment of item 869.00 TSUS is not to raise additional revenue for the Government, the application of the flat rate in those cases where the dutiable value of a single imported article exceeds the traveler's personal exemption clearly is an unwarranted taking of money. The same would hold true in a case where a number of articles were imported but the dutiable value of all but one of the articles falls well within the traveler's personal exemption. To follow the conclusion in ruling 720164 and to slavishly apply the examples given in section 148.101 of the regulations would result again in three duty calculations by the inspector (a flat 10 percent rate on the value of all the articles except one, a 10 percent rate on the value of the remaining article up to the traveler's personal exemption, and a duty rate calculation for the dutiable value of the article in excess of the dutiable value computed at 10 percent).

The inquiry which resulted in ruling 720164 was a request for internal advice from the District Director at Seattle in which he pointed out that the holding in Headquarters ruling 717605 was that in similar circumstances duties should be assessed on the entire item at the normal rate. That ruling was based upon ruling 717430 which held that the taking of an automobile of American manufacture to another country specifically for repair or painting would not give rise to the application of item 869.00 because the article (the automobile) "was not acquired abroad but was merely improved." The improvements was held to be dutiable under item 806.20.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

729155

The title of part 6 of schedule 8 TSUS is "non commercial importations of limited value". General Interpretive Rule 10(b) TSUS states that the titles of the various schedules, parts, and subparts are intended for convenience and reference only and have no legal or interpretive significance. Yet in the second paragraph on page 3 of ruling 720164 the meaning of the title is discussed and the conclusion is reached that while the term "limited value" is neither defined nor explained by legislative history, it "does not refer to a monetary limitation, but instead is used in connection with the requirement that the assessment of the flat rate of duty provision on the imported article would not adversely affect the economic interest of the United States." Inasmuch as the interpretive headnote specifically directs that such titles have no legal or interpretive significance an opinion should not have been given on its meaning in connection with the administration of item 869.00 TSUS. Suffice it to say however, the conclusion reached on its meaning is questionable.

Insofar as the legislative history is concerned, it does state that the reason for the enactment of item 869.00 was to reduce delays and bottlenecks in clearance of travelers at ports of entry. However, the description of the legislation in the history in both the summary and general explanation is as follows:

> A 10 percent rate of duty would be applied to articles brought to the United States by individuals if the importation is not commercial and the goods are for the traveler's personal use <u>and their value does not exceed $600</u>. The application of tariff classification procedures on merchandise imported by travelers requires an inordinate amount of processing time, compared to the amount of duty collected, and creates a bottleneck in processing of persons entering the country. The bill would largely eliminate the bottleneck without adversely affecting Customs revenue collections. House Conference Report No. 95-1517, August 17, 1978, page 3. (Emphasis supplied)

We think it abundantly clear from the above that the 10 percent flat rate was not meant to apply to merchandise accompanying a traveler which exceeded his personal exemption (then $600). It follows that entitling part 6 of schedule 8 "non commercial importations of limited value" is accurately descriptive, not-

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G4

729155

withstanding the fact that it has no legal or interpretive significance.

HOLDING

When an article is imported which exceeds a traveler's personal exemption, the rate of duty applied should be computed based upon the usual provision in the Tariff Schedules, without utilization of the flat rate specified in item 869.00 TSUS. In this case the trailer should have been dutiable at 4.4 percent of its entire value pursuant to item 692.60 TSUS.

Effect on other rulings:

Headquarters ruling 720164 is hereby revoked insofar as it conflicts with this holding.

Donald W. Lewis

729166 LR

Mr. William I. Phelan
Timex Corporation
Waterbury, Connecticut 06720

Dear Mr. Phelan:

This is in response to your letter requesting a binding ruling on the acceptability of proposed country-of-origin marking on watch straps which will be imported attached to watches designed to commemorate the anniversary of the Statue of Liberty. You indicate that the sale of these commemorative watches will be an integral element of a Timex fund raising effort on behalf of the French-American Committee for the restoration of the Statue of Liberty. Samples of the straps with the contemplated markings have been submitted.

You indicate that the straps will be manufactured in Switzerland and that the watch movements and watchheads will be assembled in France. The straps in question, which are made of a black plastic material, are marked "France 1886" in small black letters on one of the top surfaces of the strap near the watch dial; they are marked "1986 USA" on the other top surface near the watch dial. They are marked "Swiss Made" in comparable size letters on the back of the watch strap.

The issue to be decided in this case is whether the country-origin of the Swiss strap must be marked in close proximity to the words "France" and "USA" on the front. Section 134.46 of the Customs Regulations provides that if the words "United States", the letters "USA", or the name of a foreign country other than the country in which the article was manufactured appear on an imported article or container, there shall appear, legibly and permanently, in close proximity to such words or letters in at least a comparable size, the name of the country of origin. The close proximity requirement, which has been interpreted to mean the same surface, does not apply where the location other than the country of origin appears as part of a trademark or trade name or as part of a souvenir marking. See Section 134.47, Customs Regulations.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

66

In this case, we are of the opinion that the words "France" and "USA" appear as part of a souvenir marking. We believe that they clearly are in connection with the commemorative nature of the watch and the efforts of the French-American Committee to raise money for the restoration of the Statue of liberty. The logo of the French-American Committee, which will appear on the watch dials, is further evidence that words "France" and "USA" are part of a souvenir marking. Accordingly, we find that the country-of-origin marking need not appear on the top surface of the watch strap and is, therefore, acceptable.

Sincerely,

Steven I. Pinter

This ruling concerns the prohibitions set forth in 19 U.S.C. 1526(e) and 15 U.S.C. 1124 against the importation and subsequent entry at any customhouse of the United States of articles manufactured abroad bearing counterfeit trademarks.

ISSUE:

Would the entry of several handbags bearing marks which are suspected of being confusingly similar, identical with or substantially indistinguishable from registered trademarks of Gucci Shops, Inc., be prohibited.

FACTS:

A shipment of handbags was entered at our Los Angeles, California, office and were detained by Customs officers as infringing the registered trademarks of Gucci Shops, Inc., for a pattern of repeating facing non-interlocking "GG" and a stripe containing three distinct bands of colors, the colors being green, red then green. All of the handbags were constructed of PVC material bearing a diamond like pattern of circular marks which appear to be fanciful versions of the letters "NFE" (the initials of the importer) and also had marks attached which appear to be a larger brass version of the same circular mark and a three colored stripe design. The stripe design marks on two of the bags are blue, red, and blue. However, the stripe design mark on one of the imported handbags was green, red and green and was suspected of being imported in violation of the Customs "counterfeit" trademark law (19 U.S. 1526(e)). A Los Angeles Customs officer submitted three sample handbags from this shipment to Customs Headquarters and asked us to confirm that the marks on the handbags are infringing, noting that the registered trademarks referred to above have been recorded with Customs for import protection.

LAW AND ANALYSIS:

Section 526(e) of the Tariff Act of 1930, as amended (19 U.S.C 1526(e)) provides for the seizure and forfeiture of merchandise bearing a counterfeit mark (within the meaning of section 1127 of Title 15) imported in violation of the provisions of section 1124 of Title 15. A "counterfeit" is a

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

68

spurious mark which is identical with or substantially indistinguishable from, a registered mark (15 U.S.C. 1127; 19 CFR 133.23a(a)).

Section 42 of the Act of July 5, 1946 (commonly referred to as the Lanham Act, 60 Stat. 440, 15 U.S.C. 1124) prohibits the entry at any customhouse of the United States of articles of imported merchandise which shall copy or simulate a U.S. registered trademark, provided a copy of such trademark registration is filed with the Secretary of the Treasury and recorded in the manner provided by regulations (19 CFR 133.1 - 133.7). Infringement of federally registered trademarks is governed by the test of whether defendant's use is likely to cause confusion, or to cause mistake, or to deceive.

When comparing conflicting marks to determine whether or not they are "counterfeit," we must first determine that the marks are "spurious." The term "spurious" refers to marks that are applied to goods without authorization of the trademark owner. Therefore, genuine trademarked articles could not fall within the definition of the term "counterfeit."

It is also important to compare the accused mark with the protected mark as it appears on the trademark owner's merchandise, and that the comparison be made from the perspective of an average purchaser rather than an expert. If, upon examination of the marks as they appear on the imported merchandise, an average purchaser would find them to be "the spitting image" of, or "substantially indistinguishable" from the trademark owners' merchandise, then a "counterfeit" trademark violation is established. See Montres Rolex, S.A., Plaintiff-Appellee, against Dennis Snyder, Regional Commissioner, U.S. Customs Service et al., U.S. Court of Appeals for the Second Circuit, 718 F.2d 524; 220 U.S.P.Q. 10. This was an appeal from a judgement of the U.S. District Court for the Southern District of New York, Vincent L. Broderick, Judge, declaring imported gold watch bracelets to be counterfeits and therefore subject to forfeiture under 19 U.S.C. 1526(e), and directing defendant U.S. Customs Service to dispose of the merchandise.

We are of the opinion that the pattern of circular "NFE" marks on the imported handbags are not confusingly similar to the repeating facing non-interlocking "GG" trademark of Gucci Shops, Inc. The larger brass "NFE" mark and the blue, red, blue stripe design are also non-infringing in our opinion. However, upon comparison of the green, red, green stripe design mark which appears on one of the sample handbags using the test as set forth by the Court of Appeals in the Rolex case, we have no difficulty in concluding that this handbag bears a "counterfeit" mark. The presence of other marks which are non-infringing makes no difference in our decision and, in fact, may serve to increase the likelihood of confusion.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

729212

G9

HOLDING:

The imported handbags in question, except for the one bearing the green, red, green stripe design may be released to the importer as non-infringing. The handbags bearing the green, red, green stripe design are subject to seizure and forfeiture as bearing a mark which is a "counterfeit" of the Customs protected trademark of Gucci Shops, Inc., for a stripe containing three distinct bands of color, the colors being green, red then green. The owner of the trademark shall be notified of the seizure and the quantity of the articles seized. Unless the trademark owner, within 30 days of notification, provides written consent to the importation of the articles, exportation, entry after obliteration of the trademark, or other appropriate disposition, the articles shall be disposed of (after removal or obliteration of the "counterfeit" marks) as follows: (19 CFR 133.23a)

(1) By delivery to federal, state or local government agencies which have a need for them, or

(2) By gift to charitable institutions which have a need for them, or

(3) By sale at public auction, after 1 year from forfeiture, after first determining that no federal, state or local government agency or charity has a need for them, or

(4) By destruction, if they are unsafe or a health hazard.

Please note that there is no preference stated in the law or regulations (19 U.S.C. 1526(e) and 19 CFR 133.52(c)) between options (1) and (2) above, and that option (3) cannot be used unless the district director is satisfied that no government agency or charitable institution needs the goods.

While it would appear that 19 U.S.C. 1526(e) authorizes Customs to dispose of forfeited articles with the "counterfeit" marks still in place in cases where it is not "feasible" to remove or obliterate the marks, we are no longer interpreting the law in that manner. We note that the Trademark Counterfeiting Act of 1984 (Public Law 98-473, 18 U.S.C. 2320) imposes criminal sanctions for trafficking in counterfeit goods. If Customs were to sell or give away forfeited articles bearing counterfeit marks, Customs would be acting contrary to the intent of Congress in enacting the Trademark Counterfeiting Act. Customs activities in enforcing the provisions of the Trademark Counterfeiting Act of 1984 should be coordinated with the FBI and the U.S. Attorney.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

729212

G10

Therefore, articles forfeited to the Government bearing "counterfeit" marks shall no longer be given away or sold pursuant to options (1), (2) or (3) above unless the counterfeit marks are removed or obliterated. In cases where removal or obliteration of the marks is not feasible (the articles would be defaced, or obliteration would be disproportionately expensive considering the value of the articles), the articles shall be destroyed (19 U.S.C. 1611). However, before destroying a shipment of articles which would be useful to a government agency or charity, you may invite the trademark owner or a potential donee agency or charitable institution to assist in removing or obliterating the "counterfeit" marks.

Copies of this decision will be circulated to all Customs officers for their guidance.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and
Restricted Merchandise Branch

Mr. Robert G. Slaughter
Director, Federal Affairs
Pacific Resources, Inc.
2501 M Street, N.W.
Washington, D.C. 20037

Dear Mr. Slaughter:

This refers to your letter of May 23, 1985, requesting a ruling that your subsidiary, Hawaiian Independent Refinery, Inc., be permitted to domesticate bonded bunker fuel under 19 CFR 10.62 when your company's domestic bunker fuel supply has been depleted.

Section 10.62, Customs Regulations, is concerned with the withdrawal under 19 USC 1309 of bunker fuel oil from Customs bonded tanks. 19 USC 1309 provides for the duty-free withdrawal from Customs bond of articles for use on qualifying vessels and aircraft.

You state that certain marketing possibilities sometime arise when your company's supply of domestic bunker fuel is depleted and you wish to domesticate bonded bunker fuel pursuant to section 10.62(e), Customs Regulations, with appropriate duty being paid prior to withdrawal. You state that the District Director of Customs in Honolulu reads section 10.62(e) to infer that the bonded fuel may be domesticated only in isolated emergency instances. Part 177 of the Customs Regulations forbids the issuance of a binding ruling when the request is the subject of an ongoing transaction at a Customs field office. Therefore, this letter is being issued as an "information letter."

Section 10.62(e), Customs Regulations, states that if a vessel not entitled to duty-free withdrawal of articles from Customs bond under section 1309 should be supplied with bunker fuel because of an emergency, a duty paid withdrawal shall be filed on the first day that the customhouse is open for the general transaction of business following the withdrawal. 19 USC 1557(a) provides in part that merchandise in Customs bonded warehouses may be withdrawn, at any time within 5 years from the date of importation, for consumption upon payment of the duties and charges accruing thereon and at the rate of duty imposed by law upon such merchandise at the date of withdrawal.

G12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The procedure in section 10.62 of the Customs Regulations is one that was specifically set up so that when withdrawals were made the presence of a Customs officer would not be required. It is for this reason that section 10.62(e) was necessary because until recently (within the last 10 years) withdrawals from ordinary Customs bonded warehouses had to be supervised by a Customs warehouse officer. The procedure that would be followed for a duty-paid withdrawal from a Customs bonded tank ordinarily set up for the withdrawal of bunker fuel free of duty under 19 USC 1309 and section 10.62 of the Customs Regulations is governed by part 144 of the Customs Regulations, which is entitled "warehouse and rewarehouse entries and withdrawals." In other words a withdrawal from your bonded tank for domestic consumption is not a withdrawal under section 1309. Therefore, part 144 of the Customs Regulations will apply instead of section 10.62. Emergency withdrawals, of course, continue to be governed by section 10.62(e).

A copy of this letter is being furnished to the District Director of Customs in Honolulu.

Sincerely,

Steven I. Pinter

Mr. Sheldon Parker
W.M.R. Watch Case Corporation
1140 Broadway
New York, New York 10001

Dear Mr. Parker:

This is in response to your letter of January 10, 1986, addressed to our New York office, concerning the country of origin marking requirements applicable to skeleton watch bracelets which will be manufactured in Hong Kong and imported into the United States where they will be processed into finished watch bracelets. The further processing will include the addition of two metal spring tube cartridges and no less than 37 top shells (made of either stainless steel or rolled gold plate). You asked if the further processing described above would qualify the skeleton bracelets for the marking exception set forth in Section 134.35 of the Customs Regulations (19 CFR 134.35) for articles used in the United States in manufacture which results in articles having a name, character, or use differing from that of the imported article.

We are of the opinion that the additional processing referred to above to be performed by your firm in the United States amounts to a substantial transformation of the imported skeleton watch bracelets by a process of manufacture which results in articles having a name, character and use differing from that of the imported articles. Accordingly, the imported skeleton watch bracelets may be excepted from individual marking pursuant to 19 U.S.C. 1304(a)(3)(D), if the containers in which they are imported are legibly and conspicuously marked to indicate the country of origin, and Customs officers at the port of entry are satisfied that the skeleton bracelets will reach the ultimate purchaser in the United States in the original marked containers in which imported, and will be used only in the manufacture of finished bracelets and not otherwise sold. You should be prepared to furnish statements or affidavits to this effect for each entry for which this exception is sought.

Sincerely,

Steven I. Pinter

Mr.Columbe,

In response to your recent inquiry,

the following information is provided:

This is to confirm our previous advice regarding wood veneer and metallic products made in Germany and Italy. The mere slitting of the finished wood veneer product or metallic product does not constitute substantial transformation. "Made in Canada" is unacceptable. Slit rolls must be marked to indicate Germany or Italy as the country of origin.

The application of adhesives or primer to the back of the otherwise finished product does not result in a new and different article having a new name, character, or use The operations is Canada do not constitute a substantial transformation.

Sincerely,

Steven I. Pinter

Mr. David L. Brown
Bluefield Manufacturing, Inc.
Bluefield Industrial Park
P.O. Box 1010
Bluefield, Virginia 24605

Dear Mr. Brown:

This is in response to your letter dated February 7, 1986, concerning the country-of-origin marking requirements of imported PVC electrical tape. You indicate that the tape is imported in log roll form and that after importation each log is slit into 64 individual rolls of tape.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) generally requires that every article of foreign origin be marked to indicate the name of the country of origin to the ultimate purchaser in the United States. The ultimate purchaser is the last person in the United States who will receive the article in the form in which it was imported. This requirement would apply to imported electrical tape. We cannot consider your company to be the ultimate purchaser in this case since the slitting of the tape from log roll form into individual rolls does not substantially transform the tape into a new and different article of commerce. Accordingly, each individual roll must be marked so that the ultimate purchaser, the user of the tape, is advised of the country of origin. The logs must be marked at the time of importation in a manner which will accomplish this (e.g. marking the country of origin on the log at appropriate intervals) unless the district director, in accordance with the procedures outlined in 19 C.F.R. 134.34, permits the marking of the individual rolls to be accomplished after importation.

You also ask whether you are required to label a small roll of tape (valued at 11¢) that forms part of a cable splice kit manufactured by your company that sells from $8 to $25. All of the other items used in these kits are made in the United States.

A4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

In our view, the tape used in this manner loses its separate identity and becomes an integral part of the cable splice kit. As such, your company would be considered the ultimate purchaser of this tape. Accordingly, we will except the tape from individual country of origin marking under 19 U.S.C. 1304(a)(3)(d) provided: (1) the outermost containers in which the tape is imported are legibly and conspicuously marked to indicate the country of origin; (2) Customs officers at the port of entry are satisfied that the tape will reach your company in the original marked containers in which imported; and (3) the tape will be sold only at part of the cable splice kits. Statements or affidavits to this effect must be submitted for each entry for which this exception is requested.

Sincerely,

Steven I. Pinter

COPYRIGHT ADVISORY OPINION

TO: Martin R. Greenstein, Esq.
Baker & McKenzie
Prudential Plaza
Chicago, Illinois 60601

COPYRIGHT OWNER: International Business Machines Corp. (IBM)
COPYRIGHT REGISTRATION NO: TX 1-171-911
DATE OF FIRST PUBLICATION: August 9, 1984
PROTECTED Article (description):

Computer Program Basic Input/Output Systems ("IBM BIOS")

IMPORTED ARTICLE (description):

Computer program basic input/output system: sample consisting of a 2764 EPROM labeled "Evergo 1985 PC BIOS 2.04;" a 5 1/4" disk; a source code listing; an object code listing and a function flow chart. We understand that your client, Evergo Computers Ltd, has changed its name to Ergo Electronics Company. Despite the EPROM's "PC BIOS 2.04" label, the extracted and printed contents of the EPROM titled "EVERGO BIOS V 2.0."

DIFFERENCES AND SIMILARITIES NOTED:

Both the IBM BIOS and the Evergo BIOS V 2.0 are basic input/output systems in computer programs. Laboratory analysis L.R. 86-10007-008) shows the Evergo BIOS 2.0 to compare with IBM BIOS at levels of 7.60 in place and 19.36 overall. The most substantial similarity (approximately 200 bytes) occurs in the Keyboard I/O routine.

SUBSTANTIAL SIMILARITY TEST: Whether an ordinary observer who is not attempting to discover disparities between two articles would be disposed to overlook them and regard their aesthetic appeal as the same; Peter Pan Fabrics, Inc. v. Martin Weiner Corp., 274 F.2d 487 (1960). Whether an average lay observer would recognize the alleged copy as having been appropriated from the copyrighted work; Ideal Toy Corp. v. Fab-Lu Ltd., 360 F.2d 1022 (1966). There must have been access to the copyrighted work, as well as substantial similarity not only of the general ideas but the expression of those ideas as well.

OPINION: ☐ Infringing - Imported articles subject to seizure, forfeiture and destruction; return to country of export may be permitted by district director if satisfied that importer had no reasonable grounds for believing that his acts constituted a violation of law; bond of copyright owner (if any) returned. (17 U.S.C. 602(b), 603(c); 19 CFR 133.42, 133.44)

☒ Non-infringing - Imported articles and bond of copyright owner (if any) released to importer. Verification of the program in the condition as imported may be expected.

Mr. Mark D. Taylor
Tyndale House Publishers
336 Gundersen Drive
Box 80
Wheaton, Illinois 60189

Dear Mr. Taylor:

This is in response to your letter of February 13, 1986, concerning the publication of an art book entitled DOORPOSTS. The book will be made up of Bible passages rendered in calligraphy, an art form using hand-lettering. The book will consist preponderantly of this artwork. The Bible passages are from THE LIVING BIBLE, a modern translation of the Bible which is protected by U.S. copyright. You believe that the pages done in calligraphy should be considered to be pictorial or graphic rather than as literary material for purposes of determining if the "manufacturing clause" of the Copyright Law applies. You submitted several sample pages of calligraphy and asked if the book would be subject to the manufacturing restrictions if imported bearing the notice of copyright.

In general, the "manufacturing clause" of the Copyright Revision Act of 1976 (17 U.S.C. 601) prohibits the importation and public distribution in the United States of a work authored by a U.S. National or domiciliary consisting preponderantly of nondramatic literary material that is in the English language and protected by copyright, unless the portions consisting of such material have been manufactured in the United States or Canada. However, the manufacturing restrictions would not extend to dramatic, musical, pictorial, or graphic works; foreign-language works; or public domain material. In cases such as this, where the work consists partially of text and partially of calligraphy, the test is whether the work, taken as a whole, consists, "Preponderantly of nondramatic literary material that is in the English language."

The legislative history of the Copyright Revision Act of 1976 indicates that the manufacturing requirements of the law would apply if the English language nondramatic literary text exceeds the pictorial or other exempt material in importance. However, as you may know, the test that Customs officers use to determine if an imported work is "preponderantly" nondramatic

A7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

literary material subject to the manufacturing requirement is found in Stonehill Communications, Inc. v. John Martuge, New York Area Director of United States Customs Service, 512 F. Supp. 349 (S.D.N.Y. 1981). That decision states that the test according to the legislative history, is a mechanical one. You measure the surface area of the text and pictures (or other exempt material), exclusive of margins, respectively. If there are more square inches of text than pictures, the book is "preponderantly" text and is subject to the manufacturing restrictions. Otherwise, it is not.

We would agree that the pages of calligraphy which you submitted constitute artwork, so that these pages would be considered pictorial rather than literary material for purposes of determining if the manufacturing restrictions apply. When you are ready to enter the book into the United States, we suggest that you provide Customs officers at the port(s) of entry with an exact measurement of the text and pictorial parts, following the guidelines set forth in the Stonehill decision. Assuming the measurements follow the Stonehill guidelines and confirm your statement that the book consists preponderantly of this artwork (calligraphy), the book would be found to be "preponderantly" pictorial and not subject to the import restrictions of the "manufacturing clause." Accordingly, you would be able to import an unlimited number of copies, bearing the notice of copyright, without restriction.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and

A8

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

MAR 1 1 1990

REFER TO
CPR-3 CO:R:E:E
729375 SO

This ruling concerns whether or not sample 3" clip on stuffed animals are infringing importations pursuant to Sec. 602 of the Copyright Revision Act of 1976 (17 U.S.C. 602).

ISSUE:

Would the importation of two types of clip on stuffed dogs infringe the copyright registrations of United Features Syndicate, Inc., for "UNITED FEATURE COMICS," which includes the "Peanuts" comic strip character "Snoopy;" and would a clip on stuffed bear infringe the copyright registrations of American Greetings Corporation for "CARE BEARS" and "CARE BEARS MANUAL?" The copyrights referred to above have been recorded with the Customs Service for import protection.

FACTS:

A prospective importer asked for our advice as to whether two types of clip on stuffed dogs and a stuffed bear would infringe the copyrights for the "Peanuts" comic strip character "Snoopy" and the "CARE BEARS." The heads of the dogs are white with elongated snouts, button noses, small black eyes and large floppy black ears. One of the sample dogs submitted by the importer is wearing a brown cowboy hat and a green cape with a red ribbon. The sample clip on bear is posed in the seated position and has a small snout, drooping eyes, ears set high on the forehead, and bright red hearts on the extreme ends of the snout and both hind paws.

LAW AND ANALYSIS:

The basic test for determining whether there has been an infringement of a copyright is whether substantial similarity exists between two works. The appropriate test for determining whether substantial similarity is present is whether an average lay observer would recognize the alleged copy as having been appropriated from the copyrighted work, Ideal Toy Corp. v. Fab-Lu Ltd., 360 F.2d 1022 (1966). Another statement of the test is whether an ordinary observer who is not attempting to discover disparities between two articles would be disposed to overlook them and regard their aesthetic appeal as the same, Peter Pan Fabrics, Inc. v. Martin Weiner Corp., 274 F.2d 487 (1960). The substantial similarity test was developed in order to bar a potential infringer from producing a supposedly new and different work by deliberately making trivial or insignificant variations in specific features of the copyrighted work.

A9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Two steps are involved in the test for infringement. There must be access to the copyrighted work and substantial similarity not only of the general ideas but the expression of those ideas as well. United Features Syndicate obtained its copyright registrations for the "Peanuts" comic strip in 1958. American Greetings Corporation obtained their copyrights in 1983. It is apparant that the party that made the sample dolls in Korea had ample opportunity to view the copyrighted works. Even without direct evidence of access to the copyrighted works, the substantial similarity between the works may be so striking as to preclude the possibility that the works were arrived at independently.

Section 602(b) of the Copyright Law (17 U.S.C. 602(b)) provides that, "In a case where the making of the copies or phonorecords would have constituted an infringement of copyright if this title had been applicable, their importation is prohibited." Section 603(c) of the Copyright Law (17 U.S.C. 603(c)) provides that, "Articles imported in violation of the importation prohibitions of this title are subject to seizure and forfeiture in the same manner as property imported in violation of the Customs revenue laws. Forfeited articles shall be destroyed as directed by the Secretary of the Treasury or the court, as the case may be; however, the articles may be returned to the country of export whenever it is shown to the satisfaction of the Secretary of the Treasury that the importer has no reasonble grounds for believing that his or her acts constituted a violation of law."

We compared the imported articles with the copyright protected work. Our comparison leaves no doubt that the heads of the sample clip on stuffed dogs are substantial copies of "Snoopy," noting the distinctive shape of the snout and the set of the long black floppy ears. The insignificant differences we noted in the shapes of the bodies and tails, appears to us to constitute a deliberate attempt to make minor variations in the appearance of the imported items while preserving a similar aesthetic appeal to the ordinary purchaser. The fact that one of the imported dogs is clothed in a cowboy hat and cape, and the other has a black bushy tail uncharacteristic of "Snoopy," in our opinion, represents a deliberate attempt to produce non-infringing articles. However, the substantial similarity of the heads of the imported clip on dogs with "Snoopy" rules out coincidence and independent creation.

With regard to the imported stuffed clip on bear, we note a strong resemblance to one or more of the "CARE BEARS" depicted in the "CARE BEAR MANUAL," particularly the yellow bear on the cover of the Manual, noting the shape of the face, the seated body position, and the set of the ears on the forehead. However, the strongest evidence of copying is the appearance of the bright red hearts on the tip of the nose and

A10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

the soles of the hind paws on the imported bear. We note that all of the "CARE BEARS" have the hearts at these locations. We are of the opinion that the imported bear is substantially similar to the copyright protected works of American Greetings.

The fact that clip on stuffed dogs and bears manufactured in Korea from the same patterns may have been permitted to enter the U.S. previously without restriction is not significant. Apparent lapses in Customs enforcement of copyright restrictions applicable to particular items arriving in the United States in the past does not create a practice that is binding on the Customs Service with regard to future shipments.

HOLDING:

We are of the opinion that the imported articles would be prohibited entry into the United States as infringing on the rights of the copyright owners. The merchandise, if imported, would be subject to seizure and forfeiture (17 U.S.C. 603). However, the district director of Customs may grant relief from forfeiture upon consideration of a petition submitted pursuant to 19 CFR 133.51(a). If the district director is satisfied that the importer had no reasonable grounds for believing that his acts constituted a violation of law, exportation of seized merchandise back to the country of export may be permitted.

MAR - 4 1986

Maureen M. Dockery
Roquette Corporation
645 Fifth Avenue
New York, New York 10022

Dear Ms. Dockery:

This refers to your letter of February 10, 1986, addressed to the Director, Office of Regulations and Rulings concerning your company's request for the reliquidation of an entry of merchandise which was denied by Customs in New York.

You state that your "protest" was filed on September 20, 1985, and was denied on December 31, 1985. You forwarded a copy of your letter of September 16, 1985, addressed to the Protest and Control Unit of Customs at the World Trade Center in New York and a copy of the denial. The denial was issued because your claim of September 20 was filed more than one year from the date of liquidation, which is stated to be November 5, 1982. You state that the commodity team leader in New York notified you that after checking with the Customs computer the liquidation date of the entry was actually October 30, 1983.

Your letter of September 16 was properly treated by New York Customs as being a petition for relief under 19 U.S.C. 1520(c)(1) rather than a protest. That provison of law requires that any request for relief thereunder must be filed within 12 months of the date of liquidation of the entry sought to be reliquidated. A protest, on the other hand, must be filed within 90 days of the liquidation. In other words, Customs is prevented from taking any remedial action on your entry if it was liquidated prior to September 20, 1984.

Customs entries are liquidated pursuant to law and regulation by posting a bulletin notice of liquidation at the customhouse in the port where the merchandise was entered. Accordingly, the Area Director's office at the New York

A12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Seaport has available for your examination, upon request, the bulletin notice which will disclose the actual date of liquidation. If the bulletin notice discloses that your entry was indeed liquidated less than 12 months before your petition for relief was filed on September 16, 1985, the area director's office should be contacted in order to remedy the situation. If you still believe that the petition for relief was incorrectly denied, or the area director will not reliquidate the entry upon your notification that the petition was incorrectly denied, you may file a protest on Customs Form 19 to the denial of December 31, 1985, but it must be accomplished within 90 days of the denial.

Sincerely,

Steven I. Pinter
Chief, Entry, LIcensing and
Restricted Merchandise Branch

WASHINGTON, D.C. 20229

REFER TO

ENT-1 CO:R:E:E
729390 JL

Director, Office of Foreign Missions
Department of State
Washington, D.C. 20520

Dear Sir:

This refers to your transmission of February 20, 1986, of a request for refund of duty paid on mail entry No. Z 886355 at JFK Airport by Mr. S.A. Asamoah of the Guana Mission to the United Nations on May 3, 1985.

As you are aware, Customs has no authority to reliquidate an entry unless a protest is filed within 90 days of the date of liquidation pursuant to 19 U.S.C. 1514. A one-year period is allowed for the filing of a petition for relief in the case of a mistake of fact, clerical error, or other inadvertence not amounting to a mistake in the construction of a law when the error is manifest from the record. Since nothing was forwarded except the request for Customs clearance of merchandise, we presume that the failure to claim duty-free entry was the result of either negligence or ignorance on the part of the importer, neither of which would qualify under 19 USC 1520(c)(1), the provision which would allow a reliquidation within 12 months. Accordingly, please inform Mr. Asamoah that his request is denied.

Sincerely,

Steven I. Pinter
Chief, Entry, Licensing and
Restricted Merchandise Branch

DECISION ON DISPUTED CLAIM OF INFRINGEMENT

TO:
District Director of Customs
San Juan, Puerto Rico
ATTN:. Mr. E. Picon, Asst. District Director

COPYRIGHT OWNER: Original Appalachian Artworks, Inc.
COPYRIGHT REGISTRATION NO: VA 35-804
DATE OF FIRST PUBLICATION: February 18, 1983

PROTECTED Article (description):

"THE LITTLE PEOPLE SOFT SCULPTURE - STYLE BALD" (Customs Issuance 82-37), also known as "CABBAGE PATCH KIDS." A family of dolls having soft bodies, yarn hair and a distinctive nose and receding chin. Approximately ranging from 12 inches to 30 inches in height.

IMPORTED ARTICLE (description):

60 dozen "ANN AND BOB" stuffed dolls, a little boy doll approximately 7 inches in height, with a rubberized, molded face, yarn hair, and wearing blue overalls.

DIFFERENCES AND SIMILARITIES NOTED:

Although the imported items fit the same general description of the protected "CABBAGE PATCH" dolls, significant differences exist in their facial features, size and material composition. Among these differences are the lack of the unique upward bulging tri-partite nose, life-like feet, and cute "tush" ofthe "CABBAGE PATCH" dolls. By contrast, the imported items merely have rounded button-type noses and shapeless feet. The "CABBAGE PATCH" dolls are soft-bodied and are larger than the plastic imported items.

SUBSTANTIAL SIMILARITY TEST: Whether an ordinary observer who is not attempting to discover disparities between two articles would be disposed to overlook them and regard their aesthetic appeal as the same; Peter Pan Fabrics, Inc. v. Martin Weiner Corp., 274 F.2d 487 (1960). Whether an average lay observer would recognize the alleged copy as having been appropriated from the copyrighted work; Ideal Toy Corp. v. Fab-Lu Ltd., 360 F.2d 1022 (1966). There must have been access to the copyrighted work, as well as substantial similarity not only of the general ideas but the expression of those ideas as well.

DECISION: [ ] Infringing - Imported articles subject to seizure, forfeiture and destruction; return to country of export may be permitted by district director if satisfied that importer had no reasonable grounds for believing that his acts constituted a violation of law; bond of copyright owner (if any) returned. (17 U.S.C. 602(b), 603(c); 19 CFR 133.42, 133.44)

[X] Non-infringing - Imported articles and bond of copyright owner (if any) released to importer.

Mr. Thomas E. Blanchard
Acting DARC (Classification & Value)
U.S. Customs Service
55 East Monroe Street
Chicago, Illinois 60603-5790

Re: Decision on Application for Further Review of Protest No. 3801-5-002676 of October 24, 1985.

The protest was filed by C.J. Tower & Sons of Buffalo on behalf of their client, Warner-Lambert Co., against the assessment of marking duties on a shipment of trade brochures printed in Canada. The Acting Assistant District Director (C&V) at Detroit, Michigan, did not consider the marking of country of origin to be conspicuous. The words "Printed in Canada" appear in tiny white letters oriented vertically along the right hand edge of the back page of the four page cardboard brochure, so that the words must be read from the bottom up. The tiny letters are hidden in a grid pattern of thin white lines which crisscross parts of every page of the brochure (except where the text or illustrations appear). Also appearing at the top of the same page in large black type against a plain grey background are the addresses in the United States and seven other countries of suppliers of the volumetric infusion pumps being promoted in the brochure.

A marking notice (CF-4647) was issued in order to allow the improter to correctly mark the brochures. The importer stated that the brochures had been distributed. Accordingly, additional marking duties (10 percent) were assessed. You accepted the importer's application for further review (CF-19) and submitted the matter to Customs Headquarters for decision. You concurred with the recommendation of the Acting Assistant District Director, that the protest should be denied and additional marking duties assessed for failure to mark.

We are of the opinion that the inconspicuous marking of country of origin on the brochure fails to meet the requirements of section 134.46 of the Customs Regulations, 19 CFR 134.46, which states that, "In any case in which the words 'U.S.,' or 'American,' the letters 'U.S.A.,' any variation of such words or letters, or the name of any city or locality in the U.S., or the name of any foreign country or locality in

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B2

which the article was manufactured or produced, appear on an imported article or its container, there shall appear, legibly and permanently, in close proximity to such words, letters or name and in at least a comparable size, the name of the country of origin preceded by 'Made in,' 'Product of,' or other words of similar meaning."

The argument submitted by the importer in support of his protest is that the marking "Printed in Canada" is sufficiently conspicuous and in close enough proximity to the importer's name. The importer submitted a copy of a 1971 decision concerning books which holds that the marking of country of origin may appear in a location other than the title page, even though the title page bears the name and address of the importer, consignee, or publisher in the United States. We are of the opinion that this ruling is not on point because the imported article is not a book and the location of the country of origin marking on other than the title page is not at issue. The controversy in this case centers on whether the marking is in a conspicuous place (as required by 19 U.S.C. 1304(a) and 19 CFR 134.46). Enclosed is a copy of a 1930 decision (T.D. 44370(18)) concerning boxes of safety matches on which the words "Made in Russia (U.S.S.R.)" were printed in an inconspicuous manner in black letters over slanting red and yellow lines, which is more on point. In that case, the additional marking duties (10 percent) were assessed pursuant to section 304(c) of the Tariff Act of 1930 (19 U.S.C. 1304(c)). Accordingly, the protest should be denied and marking duties assessed.

A copy of this decision may be furnished to all concerned parties. Your sample is returned herewith.

Sincerely,

Steven I. Pinter

Mr. Quintin L. Villanueva, Jr.
Regional Commissioner of Customs
300 North Los Angeles Street
Los Angeles, California 90053-3379

Dear Mr. Villanueva:

Your memorandum of March 3, 1986 (CPR-1:L:D:IV, MO/jlc), discusses problems encountered in carrying out import protection for copyrighted IBM computer programs in "gray areas" of similarity.

The administrative difficulty is pointed up by 5 cases in your region involving between 30 to 36 percent similarity where IBM declined to post a bond and follow through under section 133.43(c) of the Customs Regulations. In each case, a Mr. Robert Liesegang of IBM authorized release of the suspect computer programs.

We have been involved in ongoing discussion with IBM for some time about developing meaningful guidelines which are workable for Customs and fair to all concerned. Upon receipt of your memorandum, we contacted IBM's "in house" attorney, Mr. Tomlin, who advised us that Mr. Liesegang's actions do not constitute an established policy which we may rely on for guidelines. Mr. Tomlin did agree, however, that we should work together to eliminate a situation which is frustrating Customs efforts on IBM's behalf.

Accordingly, we have arranged to specifically discuss the situation you point out during a Headquarters' conference with IBM representatives in April. This area is exceedingly complex because the business, technical and legal considerations do not always coincide nicely, but we intend to press for some more satisfactory solution. We will keep you advised of developments.

For now, Customs should continue to detain suspect computer programs in "gray" areas (including 30 to 36 percent) and follow the adversary procedures of section 133.43, C.R.

Lauren R. Howard, Esq.
Collier, Shannon, Rill & Scott
1055 Thomas Jefferson Street, NW.
Washington, D.C. 20007

Dear Ms. Howard:

This is in response to your letter dated March 11, 1986, on behalf of the National Juice Products Association, requesting a definitive statement of Customs position on several issues relating to compliance with C.S.D. 85-47, the ruling that orange juice products which contain imported concentrate must be marked to indicate the country of origin of that concentrate. The specific issues you raise will be addressed in turn.

1. Is it permissible for U.S. orange juice processors to list only their major suppliers of foreign manufacturing concentrate, so that processors will be able to adopt a standardized label format?

You indicate in your letter that according to data from the U.S. Department of Commerce, a single foreign country - Brazil - has accounted for the overwhelming majority of U.S. imports of manufacturing concentrate for each of the past six years. Between 1980 and 1985, Brazil accounted for between 92.4 and 97.7 percent of U.S. imports of this commodity. The second largest source in each year has been Mexico, which has accounted for an average of 3.6 percent of total imports in each year. Only in 1981 did a third country - Belize - account for more than one percent (i.e., 1.2 percent) of U.S. imports of manufacturing concentrate. You note that while U.S. processors do import manufacturing concentrate from as many as 15 other foreign countries, in almost all cases, this is done only on a sporadic basis because of short-term supply considerations.

In light of the above circumstances, we conclude that the that disclosure of only the major foreign sources of the imported product will adequately inform the ultimate purchaser of the country of origin and would constitute compliance with C.S.D. 85-47. It should be noted that the Customs Service previously approved this method of marking in connection with repackaged

B6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

honey where it was similarly shown that most imports would likely be confined to a few major suppliers. See C.S.D. 84-44, October 14, 1983, as affirmed in C.S.D. 84-112, July 2, 1984. The "major supplier" rule applies for individual packers or processors; that is, processors or packers must indicate the major foreign sources of the imported concentrate they use in their own manufacturing process, whether or not that foreign source is a major one for the United States generally.

2. Is it permissible for orange juice processors using a blend of U.S. and foreign origin manufacturing concentrate to specify domestic, as well as foreign content?

We have no objection to showing that the orange juice is a blend of domestic and imported concentrate, if that in fact is the case. An example of an acceptable designation is: "Contains a blend of Florida and Brazilian concentrate."

3. In the case of frozen concentrated orange juice and orange juice from concentrate sold in cans, is the marking obligation satisfied if processors lithograph the lids of the cans with an appropriate designation of origin, even though the identification of the U.S. distributor is located on another surface of the can?

You indicate that cans are widely used as a form of packaging for frozen concentrated orange juice and orange juice from concentrate in the United States. These include composite cans (having a body composed of foil-lined cardboard) for frozen concentrate ranging from six ounces to 46 ounces in volume and all-metal cans between six and 32 ounces in volume for packaging single-strength orange juice from concentrate. In both cases, however, both the bottom and toplids are metal, and can be permanently and legibly marked using the lithography process.

In your opinion the mark placed on either lid of a can of frozen concentrate or the top lid of a can of orange juice from concentrate would be far more conspicuous than a mark placed in the text of a printed label. You also indicate that lithographing can ends would be a significantly less expensive method of marking for U.S. processors, at least until existing inventories of labels are exhausted.

B7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Section 134.46 of the Customs Regulations (19 CFR 134.46) requires that the country of origin marking appear in close proximity to and in at least comparable size letters to any U.S. address on the product. The close proximity requirement has been interpreted to mean the same side or surface. The purpose of the regulation is to prevent any confusion as to the country of origin that may be caused as a result of the U.S. address.

In this case, we find that the underlying purpose of section 134.46 would be satisfied if the country of origin appears on the lid provided the following two conditions are met: 1) the marking appears on the top of the can (i.e. the side that is to be opened by the consumer) and 2) the marking is legible and conspicuous and in at least comparable size letters to the U.S. address. In our view, so long as these conditions are met, a marking on the top of the can will fully inform the consumer of the country of origin. Our approval of this method of marking should allow for an earlier implementation date of C.S.D. 85-47 and should facilitate future compliance when there is a change in a processor's major suppliers of concentrate. Lithographing the top of the can is, however, optional and the country of origin may instead appear in a conspicuous location on the same side or surface as the U.S. address in accordance with the requirements of section 134.46.

The procedures approved above are for the purpose of facilitating compliance with the marking statute. Customs may disallow their use if they are utilized for a deceptive purpose.

Sincerely,

Donald W. Lewis

Donald W. Lewis
Director, Entry Procedures
and Penalties Division

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: MAR 26 1986

FILE: ENT-1 CO:R:E:E
729414 JL

TO : District Director of Customs
Portland, Maine

FROM : Chief, Entry, Licensing and
Restricted Merchandise Branch

SUBJECT: Your Request for a Ruling of March 5, 1986, BOR-4-02 DD

You asked whether or not the driver of a truck arriving in international traffic is considered to be a crewmember within the meaning of section 148.61, Customs Regulations. You state that it is your opinion that such persons are clearly connected with the operation of a vehicle engaged in international traffic, and as such are not entitled to the exemptions provided for in Schedule 8, Part 2, of the Tariff Schedules of the United States (TSUS).

Schedule 8, Part 2, Subpart A, Headnote 3, TSUS, provides that a person arriving in the United States "on duty as an employee of a vessel, vehicle, or aircraft, engaged in international traffic, or (b) from a trip during which he was so employed" is not entitled to the personal exemptions provided for in subpart A (with the exception of the exemption provided in item 814.00) unless he is permanently leaving employment without the intention of resuming it on the same or another carrier. Section 148.61, Customs Regulations, defines "crewmembers" as persons connected with the operation, navigation, ownership, or business of a vessel, vehicle, or aircraft engaged in international traffic. It follows, therefore, that the driver of a truck arriving in the United States in international traffic is a crewmember within the purview of section 148.61 of the Customs Regulations and is subject to the prohibition of Schedule 8, Part 2, Subpart A, Headnote 3, TSUS.

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: MAR 17 1986

FILE: ENT-1 CO:R:E:E
729418 JL

TO : District Director of Customs
Norfolk, Virginia

FROM : Chief, Entry, Licensing and
Restricted Merchandise Branch

SUBJECT: Protest No. 1401-5-000031, February 12, 1985, Roquette Corporation

The protest was made by the importer to your refusal to pay interest on overpayments of estimated antidumping duties at the rate required by the Trade and Tariff Act of 1984 on 21 entries which were liquidated on November 30, 1984.

The merchandise, sorbitol from France, was found by the Department of Commerce in a preliminary determination on November 30, 1981, as being sold at less than fair value. Consequently Customs was directed to suspend liquidation and to require deposits of estimated antidumping duties. On June 29, 1984, the Department of Commerce published a partial revocation of its antidumping duty order on sorbitol from France which was applicable to all unliquidated entries. The Duty Assessment Division at Headquarters then issued instruction No. 84-278 which stated in paragraph 6 as follows:

> The assessment of antidumping duties by the Customs Service is subject to the provisions of section 778 of the Tariff Act which requires interest on overpayments and underpayments of the amounts deposited as estimated duties. The rate at which such interest is payable is the rate in effect under section 6621 of the Internal Revenue Code of 1954 on the date of signature of the final results (March 12, 1984). That rate is 11% per annum. The interest shall be calculated from the date of payment of estimated duties through the date of liquidation, only for those entries made after January 1, 1980.

Paragraph 4 of the instruction states:

> C.I.E. supplements have been or are being issued with instructions for liquidation of entries. This telex constitutes the lifting of suspension

B10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

of liquidation as of the date of issuance of the C.I.E.'s and authorization to proceed with appraisement of all entries covered by those appraisement instructions.

The telegram bears a handwritten date of October 9, 1984.

On October 30, 1984, the Trade and Tariff Act of 1984 (Public law 98-573) was passed. Section 621 of Public Law 98-573 amended 19 U.S.C. 1677g to specify that interest be paid on overpayments of estimated antidumping duties at the rates of interest established under section 6621 of the Internal Revenue Code of 1954 for the entire period.

Because the entries at issue in the protest were liquidated on November 30, 1984, the importer urges that the interest payable must be computed under the new law. The Customs Form 6445A prepared by your office merely states that the Customs position is that "interest is payable at 11% per annum", and that "telex 09987 dated 10-9-84" supports your position. The Regional Protest Reviewer and the C.I.E. agree with your position without addressing the issue raised by the protest.

Inasmuch as the effective date of section 621 of Public Law 98-573 is October 30, 1984, one month before the date on which the entries were liquidated, interest should have been computed and paid in accordance with the new law. You are therefore directed to allow the protest in full.

[redacted]

Dear [redacted]

We have your letter of December 22, 1965, on behalf of your client, a New York company engaged in the importation, marketing, distribution and sale of seafood to super markets, hotels, and purveyors in the United States. You request rulings from this Bureau regarding the marking requirements of section 304, Tariff Act of 1930, as amended, to various seafood products under certain circumstances.

The products with which your letter is concerned are shrimp and spiny lobsters, and the processing involved in the situations below would be the removal of the heads from the shrimp, or, in the case of spiny lobsters, tearing the tail away from the balance of the crustacea. The Bureau's opinion as to the marking requirements in the situations outlined in your letter are set out below:

1. Where the product is caught in the coastal waters of Nigeria by Greek flag fishing trawlers and taken ashore for processing (deheading), grading, packaging, and freezing for ultimate shipment to the United States, the country of origin to be shown on the cartons would be the country where the processing is done, presumably Nigeria in this case.

2. Where the product is caught in international waters off the west coast of Africa and then taken ashore for processing (deheading), grading, packaging, freezing and ultimate shipment to the United States, the country of origin to be shown on the cartons would also be the country where the processing is done.

3. Where the product is caught in international waters off the west coast of Africa and processed (deheaded), graded, packaged, and frozen aboard a Greek flag fishing trawler, which product is then taken ashore for storage until placed aboard a carrier for export to the United States, the country of origin would be Greece.

B13

T99604

4. Where the product is caught in international waters off the west coast of Africa by fishing trawlers flying the Japanese flag and processed (deheaded), graded, packaged, and frozen aboard the trawler, and subsequently taken ashore in Nigeria for shipment to the United States, the country of origin would be Japan.

5. Where the product is caught in international waters by Japanese trawlers and processed on board as described in 4 above and transferred directly to carriers for shipment to the United States, the country of origin would also be Japan.*

6. Where the product is caught in the coastal waters situated on the border line between Nigeria and Dahomey by a Greek fishing trawler which catches the product while trolling on both sides of the border and dumps the product into the same bins aboard the trawler, the country of origin would be Greece if the product is processed on board in the manner described in the foregoing situations, or the country where the product is processed if the product is taken ashore for processing.

Sincerely yours,

(Signed) ROBERT V. McINTYRE

ROBERT V. McINTYRE

CLA-2-07:S:C:D3:30-19
805031

[redacted]

Dear [redacted]

In your letters of January 17 and March 17, 1983, you requested on behalf of your client [redacted], the tariff classification of toy figures to be produced in Hong Kong.

The two pre-production samples submitted with your inquiry consist of stuffed or filled out figures that depict the Ewok village creatures appearing in the motion picture entitled "Return of the Jedi."

Both figures are constructed of soft plush fur material and stuffed with shredded textile wastes. Plastic eyes and nose are affixed to the head area. The larger Ewok, identified as Wicket W. Warrick, is about sixteen inches in height and comes with a removable cloak. The nine inch Ewok sample figure is similar in appearance but without a cloak. It is said to represent baby Ewok creature characters named Wiley and Nippet.

Headnote 3 of Schedule 7, Part 5, Subpart E states in part:

> For the purposes of the superior heading to items 737.47 and 737.49 and of item 737.51, "toy figures of inanimate objects" are only imaginary creatures that either-
>
> (i) do not possess features of human or other earthly creatures;
>
> (ii) possess both earthly and non-earthly features but are predominantly non-earthly in nature; or
>
> (iii) possess features which are a hybrid of features of more then one animate object.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C1

REPLY TO: AREA DIRECTOR, NEW YORK SEAPORT, U.S. CUSTOMHOUSE, NEW YORK, NEW YORK 10048

APR 01 1983

The Ewok characters represent entirely imaginary extraterrestrial creatures and, in their entirety, depict little resemblance to any known earthly creature. Thus, the Ewok plush toy figures are classifiable under the provision for stuffed toy figures of inanimate objects, not having a spring mechanism in item 737.47, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 12.3 percent ad valorem. However, this merchandise is within the scope of item 912.34, TSUS, which provides for the temporary suspension of duty on stuffed or filled toy figures of inanimate objects not having a spring mechanism which are entered on or before December 31, 1985. See part 1B, Appendix to the Tariff Schedules and general headnotes 3(d) (ii).

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

John J. Hartuge
Area Director
New York Seaport

Sirs:

In his letter of September 15, 1983, [redacted], requested that we advise you of the dutiable status of his newly formulated Rustroy rust destroying primer, a product of England.

Previously we had issued you an information letter on this subject, our reference number 805904 dated May 10, 1983.

The newly formulated Rustroy rust destroying primer is described as a blend of several alcohols, a benzenoid plastic material and acids. It acts as a combined rust-destroyer, rust prevention and primer.

The Rustroy rust destroying primer containing a benzenoid plastic material is classifiable as a benzenoid mixture, in item 413.51, Tariff Schedules of the United States, dutiable at the rate of 17.5 percent ad valorem, but not less than the highest rate applicable to any component material. At this time the highest rate is 17.5 percent.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

John J. Martuge

[redacted]

Dear [redacted]

In a letter dated October 21, 1983, you inquired as to the dutiable status of a Lamequick aerating compound produced in West Germany.

Lamequick aerating concentrates, according to information you have provided, are spraydried, freeflowing powders which may be used as a base for a wide variety of whipped food products. These concentrates contain vegetable fat, emulsifier, protein, modified starch, and sugar. Individual types of Lamequick vary according to the emulsifier, protein, and vegetable fat used. You state that Lamequick C, the subject of this inquiry, contains hydrogenated coconut oil (46 percent by weight), dry glucose syrup (22.75 percent), lactated monodiglyceride (14 percent), sodium caseinate (9 percent), sucrose (8 percent), and sodium alginate (0.25 percent). Hydrogenated coconut oil is the ingredient in chief value for Lamequick C.

Lamequick C is classifiable under the provision for other edible preparations not specially provided for (including prepared meals individually packaged) in item 183.05, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Sincerely,

John J. Mantuge
Area Director
New York Seaport

[redacted]

Dear [redacted]

Your letter of November 8, 1984, addressed to our Washington office requesting a tariff classification on men's athletic footwear, product of Taiwan, has been forwarded to our New York office for reply.

Inspection of the sample submitted with your inquiry indicates that this is a man's all plastic court shoe with a two-band plastic/velcro closure with metal D-rings, two curving lines of small perforations on both sides extending from the velcro back to the heel counter, vinyl inside padded collar and heel counter, tricot/foam lining, and fabric/sponge insole. The outsole is a two color injection molded rubber/plastic wedge type sole which overlaps the upper by approximately 1/4 inch and has the appearance of a foxing-like band. Since this is a simultaneous injection construction, not a unit molded sole attached to an upper, we do not consider it to be critical whether or not the overlap is over or under 1/4 inch.

As you are probably aware, a foxing is a strip of material applied or molded at the sole and overlapping the upper, e.g. rubber foxing tape as usually applied to traditional basketball shoes. However, since there was a good deal of confusion among the importers as to what constituted a foxing or foxing-like band, Customs Headquarters published certain guidelines during 1983 which included the following "Characteristics of a Foxing-like Band"

1. The term "foxing-like" applies to that which has the same, or nearly the same appearance, qualities, or characteristics as the foxing appearing on the traditional sneaker or tennis shoe.

2. A foxing-like band need not be a separate component.

3. A foxing-like band may or may not secure the joint between the sole and upper.

4. A foxing-like band must be applied or molded at the sole and must overlap the upper.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

cs

5. A foxing-like band must encircle or substantially encircle the entire shoe.

6. A foxing-like band may be attached by any means.

Therefore, your sample meets the requirements for a foxing-like band and is properly classifiable under the provision for footwear which is over 50% by weight of rubber and plastic; which has a foxing-like band almost wholly or rubber or plastic applied or molded at the sole and overlapping the upper; which is not protective against water, oil, grease, or cold or inclement weather; and which is, we assume, valued for Customs purposes over $3.00 but not over $6.50 per pair, in item 700.6700, Tariff Schedules of the United States, and dutiable at the rate of 37½ percent ad valorem, plus 90¢ per pair.

In the event your sample is valued over $6.50 but not over $12.00 per pair, classification would be under item 700.6900, TSUS, and dutiable at the rate of 20 percent ad valorem, plus 90¢ per pair.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at each port at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director
New York Seaport

Mr. John M. McKeown
P.O. Box 909
Laredo, TX 78040

Dear Mr. McKeown:

In your letter dated December 24, 1984, on behalf of your client, The Coleman Company, Inc., you inquired about the dutiable status of a glass part of a gas lantern from Mexico.

The engineering drawing submitted with your inquiry shows the item to be a article of glass rounded on two sides and measuring 4.5 inches by 4.18 inches. The item is to be used as part of a gas lantern.

You claim the part should be classified under item 653.39, Tariff Schedules of the United States, the provision for illuminating articles and parts thereof, of base metal. Your item, however, is not of base metal.

It is assumed the glass part will be a shield or covering placed about or over the light source in the lantern to confine, modify or deflect the light. As such the item is considered a shade for tariff classification purposes.

Glass shades are classifiable under the provision for illuminating articles and parts, of glass, globes and shades, in item 545.5300, Tariff Schedules of the United States Annotated, and dutiable at the rate of 14 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. John E. Coyne
President
Coyne's Inc.
7400 Boone Avenue North
Brooklyn Park, MN 55428

Dear Mr. Coyne:

In your letter of January 2, 1985, you requested the tariff classification of mirrors from Taiwan.

Two samples were submitted with your inquiry. Sample #1 is an 8 inch square glass mirror sewn and glued into a lightly stuffed fabric frame, which is decorated with 6 stuffed fabric hearts. The overall dimensions are 10½ inches square. A rectangular metal ring is sewn to the top back to facilitate hanging. Sample #2 is made of fabric sewn into the shape of an upright, lightly stuffed duck, approximately 18 inches high by 13½ inches wide. Glued into the torso portion is an 8 inch round glass mirror. There is a plastic ring sewn to the top back portion to facilitate hanging. The predominant feature of both items is considered to be the mirror.

Both of these mirrors are classifiable under the provision for mirrors ... with or without frames or cases ... not over 1 square foot in reflecting area, in item 544.5100, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 10.2 percent ad valorem.

Articles classifiable under item 544.5100, TSUSA, which are the products of Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Your samples are being returned as you requested.

Sincerely,

John J. Martuge

Mr. William G. Bailes
Industrial Ingredients Inc.
1365 Wiley Road
Suite 156
Schaumberg, Illinois 60195

Dear Mr. Bailes:

In your letter dated January 29, 1985, you inquired about the dutiable status of a mixture of cane sugar and dextrose from Canada.

This mixture will consist of 93 percent by weight of granulated cane or beet sugar blended with 7 percent by weight granulated dextrose. The intended use of this product will be as an ingredient in the production of livestock feeds. This mixture will be imported in either 100 pound bags or one ton bulk containers. Your letter suggests that this mixture should be classified in item 155.4000, Tariff Schedules of the United States with duty at the rate of 0.12 cents per pound assessed upon the total sugars content of the product. The statutory wording of this provision reads as follows:

> Sugars, sirups, molasses, and mixtures thereof; all the foregoing derived from sugar cane or sugar beets and containing soluble non-sugar solids (excluding any foreign substance that may have been added or developed in the product) equal to over 6% by weight of the total soluble solids, if imported for use other than (a) the commercial extraction of sugar, or (b) human consumption.....

At a casual reading, it would appear that this tariff provision may be appropriate for the product in question. However, this is a conditional tariff provision with a clear set of criteria which must be met in order for a product to be classified therein.

While item 155.4000, TSUSA, allows for mixtures of sugars, syrups, and molasses, this provision clearly states that the components of the mixture must be entirely derived from sugar cane or sugar beets. Dextrose is not a cane or beet sugar and is generally produced from corn, although it is sometimes produced from other starch sources. Secondly, the product in question must contain a minimum of 6 percent by weight of soluble non-sugar (cane or beet) solids excluding any

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C9

substances that may have been added to the product. The 7 percent dextrose has clearly been added and therefore cannot be considered in the 6 percent requirement for this product. The types of substances which can be considered in the 6 percent portion are gums, resins, and similar substances naturally found in the sugar cane or beet juice from which sugar is normally refined. It is these substances which give the product commonly known as molasses the strong flavor, aroma, and dark color normally associated with it. Therefore, classification of a mixture of 93 percent cane or beet sugar and 7 percent dextrose under item 155.4000, TSUS, would be clearly inappropriate.

This product will posses no valid commercial identity, other than that of a sugar mixture, at the time of importation. While the declared end use of this mixture is as an ingredient in animal feed it could be put to any number of general sweetener uses such as in soft drinks, baking mixes, and dessert preparations. Accordingly, this mixture is considered to be commingled merchandise for the purposes of General Headnote 7, TSUS. As commingled merchandise, the cane or beet portion of the mixture will be either constructively or physically segregated from the dextrose portion and separately classifiable under the Tariff Schedules. The fully refined cane or beet sugar would be classified under item 155.2025, TSUS, with duty at the current rate of 0.6625 cents per pound as crystalline cane or beet sugar in a form suitable for human consumption without further refining. Sugar classifiable under this provision is subject to an import quota as well as other restrictions. The dextrose portion of this mixture would be classifiable under item 155.6000, TSUSA, and would be dutiable at the rate of 1.6 cents per pound. This portion of the mixture is not currently subject to import quotas or any other restrictions at this time.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Fred Goris
Fisher-Price
636 Girard Avenue
East Aurora, New York 14052-1885

Dear Mr. Goris:

Your letter of June 4, 1985 requested this office to rule upon the tariff classification of a net toy bag from Mexico.

Submitted with your request was a photograph of a bag which will be constructed from a net material which is in chief value of man-made fibers. The bag is approximately 18 inches by 12 inches and has two sewn-on handles. You state that the article is used for the storage of toys.

It is the opinion of this office that the bag is a tote bag used to carry toys. The presence of the two handles indicates that the bag was designed to contain personal effects - in this instance toys - during travel. Its use as a storage bag is subordinate to its design as a carrier.

The net bag is classifiable under the provision for luggage of other textile materials, in item 706.4152, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 20 percent ad valorem.

An article classifiable in item 706.4152, TSUSA, falls within textile category designation 670. As a product of Mexico, this merchandise is not currently subject to any visa or quota restraints based upon international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Mr. Lawrence D. Blume
Miller & Blume
1020 Commerce Tower
911 Main Street
Kansas City, Missouri 64105

Dear Mr. Blume:

Your letter of June 25, 1985, on behalf of Union Jacks, a Division of Gelhaar Uniform Company, requested this office to rule upon the tariff classification of baseball pants and a baseball sliding pad or pants from Thailand or Taiwan.

The knitted baseball pants are stated to be of fabric of 100 percent polyester, and to be designed for men and boys. Boys' wear implies sizes eight and larger.

On the boys' style tunnel belt loops are superimposed on the completely elasticized waistband, whereas on the men's style they are superimposed on the mostly elasticized waistband which snaps together above its zippered, fly-front opening.

The lower edge of each of the 3/4-length pant legs is elasticized. Extending downwards from each knee is a double layer of fabric which is sewn to the inside of the garment. One open pocket is located at one side of the back.

The baseball sliding pants, which extend only to the top of the thigh and are worn as undergarments, are made from a knit fabric that will be in either chief value of cotton or of polyester. The waist is elasticized. The foam rubber pads, which are approximately 13 1/2 inches long by 13 inches wide, are sewn in over the hip and upper portion of the buttocks on either side of the sliding pants.

You believe that these sliding pants are classifiable as other baseball equipment in item 734.56, TSUS, because they protect the player from injury. Since sliding into a base can actually cause such serious injury that the player will be taken out of the game and these pants protect against this type of injury, they are similar to the other named exemplars in Headnote 1(v) to Schedule 7, Part 5, Subpart D, TSUS. Accordingly, we agree that these sliding pants are within the meaning of other baseball equipment.

The baseball sliding pants, then, are clasifiable under the provision for other baseball equipment in item 734.5645, Tariff

C13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Schedules of the United States Annotated. The rate of duty is 4.1 percent ad valorem.

Articles classifiable under the provision for other baseball equipment in item 734.56, TSUS, which are the products of Thailand and Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

The men's baseball pants would be classifiable under the provision for other men's and boys' wearing apparel, not ornamented, of man-made fibers, knit, trousers and slacks, other, men's in item 379.8935, Tariff Schedules of the United States. The rate of duty is 8 cents per pound plus 30.8 percent ad valorem.

The boys' baseball pants would be classifiable under the provision for other men's and boys' wearing apparel, not ornamented, of man-made fibers, knit, trousers and slacks, other, boys' in item 379.8940, Tariff Schedules of the United States. The rate of duty is 8 cents per pound plus 30.8 percent ad valorem.

The United States currently has bilateral agreements and consultation mechanisms with many countries throughout the world, under which the importation of textiles and products thereof are controlled.

To administer these agreements, textile products are grouped under category numbers used in monitoring shipments. The category designations are derived from the item numbers under which the merchandise is classified in the Tariff Schedules of the United States Annotated (TSUSA).

The trousers fall within textile category designation 647. As a product of Thailand or Taiwan this merchandise is presently subject to quota restraints and a visa requirement based upon international textile trade agreements.

Due to the changeable nature of these agreements you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

Import restraints are administered by the U.S. Customs Service under directives of the Committee for the Implementation of Textile Agreements, U.S. Department of Commerce, Washington, D.C. 20230. Further advice or information pertaining to those agreements may be obtained from the Chairman of that committee.

Hero Conserven Lenzburg
CH-5600 Lenzburg
Switzerland

Dear Sirs:

In your letter dated July 2, 1985, you inquired about the dutiable status of four products from Switzerland.

Strawberry glace, Apricot glace, Herogel red, and Herogel neutral are products that are applied to cakes and tarts. They are shipped in 12.5 kilogram pails.

The ingredients of the strawberry glace are sugar, strawberries, water, citric acid, fruit pectin, and various additives. This glace is spread on cakes and tarts as an overcoat. It can be applied cold from the pail.

The ingredients of the apricot glace are sugar, apricot, fruit pectin, citric acid, and various additives. This glace serves as an insulating layer between the dough and the actual exterior icing. The purpose of this glace is to prevent the dough from absorbing the moisture of the exterior icing. The apricot glace is applied cold from the pail.

The ingredients of the Herogel red and the Herogel neutral are sugar, lemon concentrate, water, fruit pectin, and various additives. Both gels are boiled with water and then applied to cakes or tarts as a gloss.

The Strawberry glace and the apricot glace are classifiable under the provision for edible preparations not specially provided for: other, in item 183.0520, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

The Herogel red and the Herogel neutral are classifiable under the provision for edible preparations not specially provided for: other, in item 183.0520 as modified by item 958.18, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem. The Herogel red and the Herogel neutral are subject to quota.

Mr. Brent Evans
Evans International Inc.
10202 65th Avenue South
Seattle, WA 98178

Dear Mr. Evans:

In your letter dated July 11, 1985, you inquired about the dutiable status of imitation crabmeat from Japan.

The imitation crabmeat product is manufactured in three basic forms; sticks, one half inch chunks and shredded flakes. The items are manufactured from a fish protein base (surimi) which is steam cooked. After cooking, filament patterns are etched on and the product is rolled into sticks. Artifical red coloring is painted on the top and each stick is wrapped in cellophane and cooked again. Finally the sticks are either; packaged as they are, diagonally cut into chunks, or cut more finely into flakes.

The sticks would be classified under the provision for fish balls, cakes, puddings, pastes and sauces under item 113.08 Tariff Schedules of the United States, if in airtight containers not over 15 pounds, and would be free of duty. If not in airtight containers the sticks would be classified under item 113.11, TSUS and dutiable at the rate of 6 percent ad valorem. The sticks, if in immediate containers over 15 pounds would be classified under item 113.15 TSUS, and dutiable at the rate of 0.8 percent ad valorem.

The diagonally cut chunks and flakes would be classified under the provision for fish, prepared or preserved in any manner, not in oil, in airtight containers under item 112.14, TSUS and dutiable at the rate of 6 percent ad valorem. If not in airtight containers and in immediate containers over 15 pounds the chunks and flakes would be classified under provision for fish, prepared or preserved, under item 113.58 TSUS and free of duty. If the containers are not airtight and not over 15 pounds the flakes and chunks would be classified under the provision for fish, prepared or preserved, under item 113.60 TSUS and dutiable at the rate of 6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Clark D. Bien
Arbor Foods Inc.
P.O. Box 7686
Ann Arbor, Michigan 48107

Dear Mr. Bien:

In your letter dated June 11, 1985, you inquired about the dutiable status of an edible preparation from Canada. Your sample was consumed in analysis.

The edible preparation consists of 60 percent white refined granulated sugar and 40 percent desiccated coconut. The preparation, which is in a dry amorphous form, will be resold to industrial users in the confectionary industry.

Arbor Foods believes this product is classifiable as an edible preparation in item 183.0520, TSUS. Moreover, Arbor Foods does not believe this product is subject to the restrictions of item 958.18, TSUS, based on Presidential Proclamation no. 5340 of May 17, 1985.

We agree with Arbor Food's position that this product is classifiable as an edible preparation in item 183.0520, TSUS. However, this product is subject to the restrictions of item 958.18, TSUS, and it is subject to quota for the following reasons.

Presidential Proclamation no. 5340 states in pertinent part "except...finely ground or masticated coconut meat or juice thereof mixed with those sugars." This exception to the restrictions of item 958.18, TSUS, refers to masticated coconut mixed with sugar such as a cream of coconut product. Since your product is in a dry amorphous form, it is not exempt from the restrictions of item 958.18, TSUS.

The edible preparation consisting of 60 percent sugar and 40 percent coconut is classifiable under the provision for edible preparations not specially provided for: other, in item 183.0520, as modified by item 958.18, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem. This edible preparation is subject to quota.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is

Mr. Clark D. Bien
Arbor Foods, Incorporated
Post Office Box 7686
Ann Arbor, Michigan 48107

Dear Mr. Bien:

In your letter dated July 15, 1985, you inquired about the dutiable status of a mixture of sucrose (granulated cane or beet sugar) and fine ground corn that would be manufactured either in Canada or at the Arbor Foods' plant in Foreign Trade Zone No.8 in Toledo, Ohio. The sucrose portion of the product will be of foreign origin. The fine ground corn portion may be either of domestic or foreign origin.

The mixture will consist of 86 percent by weight of sucrose (granulated cane or beet sugar) blended with 14 percent by weight of fine ground corn. The intended use of this product will be as an ingredient in the production of livestock feeds. The mixture will be imported in either 50 or 100 pound bags or in bulk. We assume that no separation of the sugar and fine ground corn will occur and that they are present in their final proportions and that neither sugar nor fine ground corn will be added to the mixture after importation.

This surcrose/fine ground corn mixture would be classifiable under the provision for animal feeds and ingredients therefor, in item 184.8500, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Dear Ms. Cavorti:

In your letter dated July 8, 1985, you inquired about the dutiable status of wheat germ oil from Spain.

This wheat germ oil product is stated to be a mixture of wheat germ oil and a benzenoid surfactant. Technical literature indicates that the product contains 0.3 percent vitamin E and it is used in cosmetic preparations.

The wheat germ oil is a natural source of vitamin E and is considered to be a natural vitamin that has been artificially mixed with a surfactant.

Wheat germ oil is classifiable under the provision for natural vitamins, other in item 437.8600, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Ms. L. Cavorti
Traffic Department
Centerchem, Inc.
660 White Plains Road
Tarrytown, New York 10591

Dear Ms. Cavorti:

In your letter of July 8, 1985, you inquired about the dutiable status of four chemical products from Spain.

The products, their classifications and duty rates are as follows:

Biosulphur fluid and powder are mixtures consisting of sulfur and a nonbenzenoid surface-active agent. Both products are dermatological agents used in cosmetic preparations for controlling the secretion of the sebaceous glands. In addition, the fluid is used to treat dandruff and oily hair. The powder is also used to treat acne vulgaris, seborrhoeic dermatitis and eczema.

The biosulphur fluid and powder are classifiable under the provisions for non-benzenoid drugs in item 439.5070, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 3.7 percent ad valorem.

Antioxidant G-1 is a mixture composed in part of 2,6 di-T-butylcresol (as alkyl cresol) and ascorbyl palmitate that is used as an antioxidant in cosmetic products. Antioxidant G-1 is classifiable under the provision for benzenoid mixtures in whole or in part of any of the products provided for in Schedule 4, part 1, subpart B, in item 407.1610, TSUSA. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. None of the components of this product have a rate higher than the mixture rate.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E3

The water soluble - egg extract is an aqueous mixture of amino acids and polypeptides. The product is to be used in cosmetic preparations for moisturizing, regenerating, repairing and protecting the skin and hair.

The water soluble - egg extract is classifiable under the provision for mixtures of two or more organic compounds in item 430.2040, TSUSA, and dutiable at the rate of 4.1 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be the polypeptides classifiable under item 425.5290, TSUSA, and dutiable at the rate of 7.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

The antioxidant G-1 and water soluble - egg extract products may be subject to the regulations of the Environmental Protection Agency, Office of Pesticides and Toxic Substances. You may contact them at 401 M Street, S.W., Washington, D.C. 20460, telephone number (800) 424-9085.

The biosulphur products may be subject to the regulations of the Food and Drug Administration. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20857, telephone number (202) 443-3380.

Ms. L. Cavorti
Centerchem, Inc.
660 White Plains Road
Tarrytown, NY 10591

Dear Ms. Cavorti:

Your letter of July 8, 1985, received in this office July 25, 1985, concerns the dutiable status of moisturizing factor and nucleic acids from Spain.

Samples and technical literature were submitted to this office.

The nucleic acid has been anlayzed by our laboratory. It is sodium deoxyribonucleate, a non-benzenoid nitrogenous compound. The nucleic acid is classifiable under the provision for nitrogenous compounds, other, in item 425.5290, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the rate of 7.9 percent ad valorem.

As you were advised by National Import Specialist R.A. Valdes, your inquiry did not provide sufficient information with respect to the moisturizing factor, and we are not able to issue a tariff classification ruling. Requests for rulings must be submitted in accordance with Part 177, Customs Regulations.

Please submit a complete breakdown for the moisturizing factor, including chemical abstract name, the structural formula and the use of this product.

With respect to the nucleic acid, this is a ruling being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

for Loyd Duwenge

Ms. Kathleen McDonald
Manager Import Entry Department
Nettles and Company, Inc.
9801 W. Higgins Road
Rosemont, IL 60018

Dear Ms. McDonald:

In your letter dated July 23, 1985, on behalf of Central Soya of Fort Wayne, Indiana, you inquired about the dutiable status of "Kearex" from Holland.

"Kearex" is composed of a bitumen coating based on styrene butadiene styrene, modified thixotropic bitumen, inflammable solvent (dichloro methane and 1,1,1 trichloroethane) and organic fillers (calcium carbonate and calcium silicate). It is used as a roof coating and as a surface protection coating for concrete, stone, metal and other surfaces.

"Kearex" is classifiable under the provision for benzenoid mixtures in item 413.5100, Tariff Schedules of the United States Annotated (TSUSA) and dutiable at the rate of 13.7 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be 1,1,1 trichloroethane classifiable under item 429.4700, TSUSA, and dutiable at the rate of 18 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sweetgrass, Montana 59484

Dear Ms. Comstock:

In your letter dated July 30, 1985, on behalf of Mr. Bob Newswander, you inquired about the dutiable status of "Fumidyl B" from Canada.

"Fumidyl B" also known as Fumagillin, is described as a soluble powder containing bicyclohexylammonium fumagillin and appropriate phosphate buffers. The product is an antibiotic drug (antiamebic) that is also used as an antiprotozoal drug for the prevention of nosema in honey bees. The product may be manufactured from a benzenoid or a non-benzenoid source.

"Fumidyl B" soluble powder produced from a benzenoid source is classifiable under the provision for other, benzenoid antibiotics in item 411.7600, Tariff Schedules of the United States Annotated, and dutiable at the rate of 8.1 percent ad valorem.

"Fumidyl B" soluble powder produced from a non-benzenoid source is classifiable under the provision for other, non-benzenoid antibiotics in item 437.3250, Tariff Schedules of the United States Annotated, and dutiable at the rate of 4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

80 Broad Street
New York, NY 10004

Dear Mr. Marshak:

In a letter dated August 6, 1985, you inquired as to the dutiable status of inflatable articles on behalf of your client, Intex Recreation Corporation. The country of origin is Taiwan.

The articles, illustrated by actual samples and copies of catalog sheets, are described as follows:

1. "Care & Share" -- vinyl inflatable wading pool of shallow, circular construction designed for a toddler's recreational use.

2. "My Baby Sitter" -- consists of two circular shaped inflatable swim rings of different sizes that have been joined together. The inner ring is designed to hold the child, while the larger outer ring provides stability.

3. "River Rat" -- heavy duty inflatable swim ring about 48 inches in diameter. The product is equipped with an "all around" rope affixed to the tube.

4. "Ski Tube II -- heavy duty inflatable swim ring about 56 inches in diameter. Equipped with a tow harness that is "lock spliced" to the handles for added stability.

The inflatable articles are so substantially constructed as to be durable and capable of reasonable performance in recreational water activities and we conclude that they are classifiable under the provision for pneumatic mattresses and other inflatable articles not specially provided for, in item 790.39, Tariff Schedules of the United States, and dutiable at the rate of 4.2 percent ad valorem.

Mr. Peter Nesbit
Burton Son & Sanders Ltd.
College Street
Ipswitch, IP4 1DE England

Dear Mr. Nesbit:

In your letter dated July 31, 1985, you inquired about the dutiable status of a variety of cake decoration and confectionery products from England.

There are three specific products involved here. The first item is described as mixed sugar strands, commonly known as sprinkles or vermicelli in the United States. These vermicelli are produced in a variety of pastel colors and take the form of short rods approximately one-quarter inch long by one-sixteenth of an inch thick. The composition of these vermicelli is approximately 81 percent by weight cane or beet sugar, 10.6 percent corn flour, 5 percent vegetable fat, with the balance composed of coloring and stabilizers.

The second item is described as orange jelly slices and closely resemble minature half circle slices of the orange fruit complete with the rind. These half circle slices are approximately one and one-quarter inches in diameter and three-sixteenths of an inch thick. The interior of these slices is a semi solid gel, while the exterior is entirely coated with sugar crystals. The approximate composition of this product is 66.6 percent by weight cane or beet sugar, 23.2 percent glucose or dextrose, with the balance composed of coloring, flavoring, and water.

The third product is referred to as piping jelly. In this case it is the neutral variety, being a clear colorless product with no discernable flavor other than that of sugar or sweetener. This is a thick jellied substance which does not flow at room temperature. It is composed of 40 percent by weight cane or beet sugar, 37 percent glucose, 0.9 percent agar (a seaweed derivative), with the balance composed of water. The end use of this product is as a cake decoration. While it is a solid at room temperature, it will become a thick fluid when heated. The product can then be used in a confectioner's piping bag to inscribe or decorate cakes and similar edible products.

Both the sugar strands and the piping jelly are classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States, and dutiable at

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

the rate of 10 percent ad valorem. Ordinarily, products classifiable under this provision, which contain cane or beet sugar and are not prepared for sale at retail in the condition as imported, are subject to import quotas under a variety of recently enacted tariff provisions. However, Presidential Proclamation 5340 of May 17, 1985 specifically exempted a number of specialty products from these restrictions including cake decorations and similar products to be used in the same condition as imported without any further processing other than the direct application to individual pastries or confections. Accordingly, sugar strands and piping gel are not subject to import quotas or restrictions at this time.

While the orange jelly slices are also destined for use as cake decorations, this is a traditional type of candy in the United States. Accordingly, since the orange jelly slices are of the class or kind of merchandise chiefly used as candy in the United States they are classifiable under the provision for candy or confectionery, not specially provided for, in item 157.1040, TSUS. This provision is currently subject to duty at the rate of 7 percent ad valorem and is not subject to any import quotas at this time.

814939

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Ms. S. Finn, Transportation Manager
Centerchem, Incorporated
660 White Plains Road
Tarrytown, New York 10591

Dear Ms. Finn:

In your letter dated July 8, 1985, you inquired about the dutiable status of various chemicals from Spain.

According to the literature received with the samples, these chemical mixtures will be used in cosmetics.

Keratine B. E. and Keratine 100% are classifiable under the provision for mixtures of two or more organic compounds in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 4.1 percent ad valorem, but not less than the highest rate applicable to any component compound. The highest rate applicable is for the polypeptides classifiable under the provision for mixtures of two or more organic compounds in item 430.20/425.52, Tariff Schedules of the United States, and dutiable at the rate of 7.9 percent ad valorem.

Your inquiry, however, does not provide enough information for us to give a classification ruling on I.S. Avocadate and I.P. Avocadate. Your request for a classification ruling should include a list of all chemical components using the Chemical Abstract Service terminology for each chemical in each product plus a 16 ounce sample of each product.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Dr. A. Plank
SKW Trostberg AKTIENGESELLSCHAFT
Postfach 1150/1160
D-8223 Trostberg, West Germany

Dear Dr. Plank:

In your letter dated July 24, 1985, received on August 14, 1985, you inquired about the dutiable status of sodium silicate, potassium silicate and a thickening agent from West Germany.

Sodium silicate is classifiable under the provision for sodium silicate in item 421.34, Tariff Schedules of the United States, and dutiable at the rate of 1.1 percent ad valorem.

Potassium silicate is classifiable under the provision for potassium compounds, other, in item 420.36, Tariff Schedules of the United States, and dutiable at the rate of 3.3 percent ad valorem.

However, your inquiry does not provide enough information for us to give a classification ruling on the thickening agent. Your request for a classification ruling should include the name of each chemical compound in the product by Chemical Abstract Service terminology.

With respect to sodium silicate and potassium silicate, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

John J. Martuge

2801 Ponce de Leon Blvd.
Coral Gables, Florida 33134-6988

Dear Ms. Stiefel:

In your letter dated August 13, 1985, you inquired regarding the tariff classification of Benoint, a product which is manufactured in the Cayman Islands. You described this product as a surface-active agent composed of propylene glycol monostearate, stearic acid, glyceryl monostearate and isopropyl palmitate.

A sample was submitted with your ruling request. This sample has been analyzed by the U.S. Customs Laboratory. According to our laboratory, the sample consists of fatty esters of polyhydric alcohols (ethylene glycol and propylene glycol types), a fatty ester of monohydric alcohol (not sulfonated or sulfated), and a fatty acid.

You suggest that this product should be classified under the provision for fatty acid esters, ethers and ether-esters of polyhydric alcohols: other in item 465.1000, Tariff Schedules of the United States Annotated (TSUSA). However, Benoint consists of more than the fatty acid esters, ethers and ether-esters of polyhydric alcohols covered by item 465.1000. Although Benoint contains fatty esters of polyhydric alcohols, it also contains a fatty ester of monohydric alcohol and a fatty acid. Since this product contains more than the chemicals described in item 465.1000, TSUSA, it cannot be classified under that provision.

Benoint is classifiable under the provision for surface-active agents in item 465.9550, TSUSA, and is dutiable at the rate of 4 percent ad valorem.

Merchandise classifiable in item 465.9550, TSUSA, which is the product of the Cayman Islands is subject to duty free treatment under the Generalized System of Preferences upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

If a ruling is received after the filing of such documents, it should be brought to the attention of the approprite Customs officer handling the transaction.

Sincerely,

Roy X. Dewright

John J. Martuge

Mr. David Fox
H.D. Fox Company, Inc.
3710 Commercial Avenue
Northbrook, IL 60062

Dear Mr. Fox:

In your letter dated August 9, 1985, you inquired about the dutiable status of a mixture of refined sugar and whey that would be manufactured in a foreign trade zone. The refined sugar portion of the product would be of foreign origin. The whey portion would be of domestic origin.

This mixture will consist of 85 percent by weight of refined sugar blended with 15 percent by weight of whey. The intended use of this product will be as an ingredient in the production of livestock feeds. Your letter suggests that this mixture should be classified as "Animal feeds, and ingredients therefor, not specially provided for: ...Other" in item 184.8500, Tariff Schedules of the United States, at the rate of 3 per cent ad valorem. The statutory headnote for this provision reads as follows:

a) The term "animal feeds, and ingredients therefor embraces products chiefly used as food for animals, or chiefly used as ingredients in such food, respectively, but such term does not include any product provided for in schedule 4 (except part 2E thereof) or schedule 5 (except part 1K thereof);

This product will possess no valid commercial identity, other than that of a sugar mixture, at the time of importation. While the declared end use of this mixture is as an ingredient in animal feed, it could be put to any number of general sweetener uses such as baking mixes, and dessert preparations. Accordingly, this mixture is considered to be commingled merchandise for purposes of General Headnote 7, TSUS. As commingled merchandise, the refined sugar portion of the mixture will be either constructively or physically segregated from the whey portion and separately classifiable under the Tariff Schedules. The fully refined cane or beet sugar would be classifiable under item 155.2025, TSUS, with duty at the current rate of 0.6625 cents per pound as crystalline cane or beet sugar in a form suitable for human consumption without further refining. Sugar classifiable under this provision is subject to an import quota as

F3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

well as other restrictions. It is assumed that the whey portion is dried, if so, this portion of the mixture would be classifiable under item 118.0500, TSUS, with duty at the current rate of 1.5 cents per pound. Whey classifiable under this provision is subject to quota as well as other restrictions.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Roy K. Dwinell

Mr. Roberto Cueva Zambrano, Operations Director
Napko S.A. DE C.V.
Carr Monterrery Saltillo KM 338
Santa Catarina, N.L., Mexico 66350

Dear Mr. Zambrano:

In your letter of August 15, 1985, you inquired as to the dutiable status of four 2-part "NAPKO" industrial surface coatings from Mexico.

"NAPKO" 113-zinc rich epoxy primer is a zinc primer for general industrial and marine exposure that provides excellent galvanic protection and resistance to undercutting. It is composed of two parts, a base and a catalyst. The base contains epoxy resin (benzenoid), zinc, talc, solvents and additives, the catalyst contains polyamide (benzenoid), cellosolve (methyl ether of ethyleneglycol), solvents and additives. "NAPKO" 113 is used for fabrication shop applications as well as field new construction and field work. The base and catalyst are mixed on a 4 to 1 ratio by volume.

"NAPKO" 290 - series aliphatic polyurethane, is a chemically cured extremely durable high gloss interior and exterior finish coat. It may be used for both new construction and maintenance work over many types of surfaces in non-immersion chemical and marine environments. It is composed of two parts, a base and a catalyst. The base contains acrylic resin, titanium dioxide, solvents and additives. The catalizer contains polyisocyanate resin (benzenoid), solvents and additives. The base and catalyst are mixed on a 4 to 1 ratio by volume.

"NAPKO" 516 - polyamide epoxy primer is a chemically cured rust inhibitive steel primer that provides excellent corrosion resistance in severe industrial and marine environments. It is composed of a base and a catalyst. The base contains, polyamide (benzenoid), iron oxide, solvents and additives. The catalyst contains, epoxy resin (benzenoid), talc, solvents and additives. The base and catalyst are mixed on a 1 to 1 ratio by volume.

"NAPKO" 520 - series polyamide high build epoxy is a chemically cured high film build intermediate or finish coat for general use or primed steel in non-immersion chemical and marine environments. It is composed of a base and a catalyst. The base contains epoxy resin (benzenoid), titanium dioxide, solvents and additives. The catalyst contains polyamide (benzenoid), talc, solvents and additives. The base and catalyst are mixed on a 1 to 1 ratio by volume.

FS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The "NAPKO" products described above are classifiable under the provision for benzenoid paints in item 408.4800, Tariff Schedules of the United States (TSUSA). The rate of ~~duty~~ is 7 percent ad valorem.

Articles classifiable under item 408.4800., TSUSA, which are the products of Mexico are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Your question concerning the procedures to be followed when materials of Mexican origin used in your products are less than 35 percent, should be directed to the Office of Regulations and Rulings, United States Customs Service, 1301 Constitution Avenue, N.W., Washington, D.C. 20229.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

This merchandise may be subject to the regulations of the Environmental Protection Agency, Office of Pesticides and Toxic Substances. You may contact them at 401 M Street, S.W., Washington, D.C., 20460, telephone number (800) 424-9085.

Mr. Bradley H. Shorser
Sears
Sears Tower Department 733X
Chicago, Illinois 60684

Dear Mr. Shorser:

In your letter dated August 19, 1985, you inquired about the dutiable status of wooden puzzle track tiles from Taiwan.

A sample of the wooden puzzle track tile set was submitted with your request and is being returned to you, as requested. The article consists of three different sizes of masonite track pieces. The pieces measure 8 1/2 inches by 8 inches, 7 1/2 inches by 2 1/4 inches and 9 1/2 inches by 2 1/4 inches. A track design is scored on the larger pieces, while the other two sizes are of a solid green color. The wooden inlaid puzzle track tiles are to be imported without the accessories that are to be sold with them in the U.S. The puzzle track tiles will be sold with several types of toy vehicles such as trains, trucks, etc.

It is your contention that the separately imported track tiles are puzzles at the time of importation and should be classifiable under the provison for puzzles in item 735.20, Tariff Schedules of the United States (TSUS).

This office disagrees. The merchandise, in its condition as imported, consists of unassembled track components. The interlocking connection feature permits various assemblages of track layout to be used with play vehicles. This activity of selecting configurations options, using a uniform interlocking feature, is not considered a true puzzle exercise which is defined as the solving of a problem representing contrivance which tests or demands ingenuity.

The wooden puzzle track tile set is classifiable under the provision for other toys in item 737.95, Tariff Schedules of the United States, and dutiable at the rate of 9.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is

Mrs. Valerie L. Matthews
C. J. Tower & Sons
128 Dearbon Street
Buffalo, New York 14207

Dear Mrs. Matthews:

In your letter dated August 19, 1985, you inquired about the dutiable status of wet and frozen, muffin, cake, and cookie mixes from Canada. Your client is Tradition Fine Foods Ltd. of Ontario, Canada.

The wet and frozen muffin, cake, and cookie mixes are shipped in pails. These products have a sugar content ranging from 12 to 24 percent by weight. All of these products are homogeneously mixed into a uniform mass. After defrosting, the product is divided into portions, placed in baking trays, and baked without any modifications or additions. You have indicated that there is no way to mechanically separate the sugar that is included in these products, nor to use these products as a sweetener or sugar substitute.

You have attached two telexes from the Canadian Department of External Affairs with your request for a ruling. Based on these telexes you believe your products are exempt from the restrictions of item 958.17, TSUS. However, since your products are not specifically exempted by the language of item 958.17, TSUS, they remain subject to the restrictions. Enclosed is a photocopy of item 958.17, TSUS, for your reference.

The wet and frozen muffin, cake, and cookie mixes are classifiable under the provision for edible preparations not specially provided for: pancake flour and other flour mixes; refrigerated (including frozen) doughs, in item 183.0100 as modified by item 958.17, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem. Your products are subject to quota restrictions.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is

Alexandria Bay, NY 13607-9798

Dear Mr. Schofield:

In your letter dated August 20, 1985, on behalf of your client Parke Davis, Canada Inc., you inquired about the dutiable status of "Capsolin" from Canada.

"Capsolin" is a rubbing ointment containing 1.2 percent oleoresin capsicum, 5.7 percent camphor, 9.5 percent oil turpentine and 2.5 percent oil cajuput in a petroleum base. It is used on the skin for relief of pain associated with neuralgia, neuritis, joint pain, rheumatism, lumbago, sciatica, sprains or other conditions in which counterirritants are used.

"Capsolin" is classifiable under the provision for non-benzenoid drugs, other, including synthetic drugs in item 439.3095, Tariff Schedules of the United States, and dutiable at the rate of 3.7 percent ad valorem.

This ruling is being issued under the provision of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

This product may be subject to the regulations of the Food and Drug Administration. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20857, telephone number (202) 443-3380.

Mr. Marcos Chang
New Harbor Enterprises, Inc.
10 Penn Center
Philadelphia, PA 19103

Dear Mr. Chang:

In your letter dated August 22, 1985, you inquired about the dutiable status of a foot warmer from Taiwan. A sample was submitted and is being returned as you requested.

The item in question is a bootee approximately 10 inches high with an upper made from a cotton/polyester fabric and a filling of feathers and down. The upper has been elasticized below the topline for a snug fit around the lower calf. The fabric outsole has PVC dots applied to provide slip resistance. According to figures you supplied, this article is under 10% by weight of rubber or plastics, both in adult and in children's sizes. The upper is not in chief value of vegetable fibers.

This foot warmer is classifiable under the provision for other footwear which is not over 10% by weight of rubber or plastics, which has uppers of non-vegetable fibers and soles of a material other than leather, in item 700.80, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 12.5% ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Mr. Doug McEwen
Champlain Industries Ltd.
6535 - 21 Millcreek Drive
Mississauga, Ontario
Canada L5N 2M2

Dear Mr. McEwen:

In your letter dated August 15, 1985, you inquired about the dutiable status of a cocoa product from Canada.

The cocoa product in which you have expressed interest is a brown amorphous powder which is stated to have the following composition by weight:

Granulated cane/beet sugar	64 percent
Cocoa liquor fat (cocoa butter)	18 percent
Cocoa powder	18 percent

While you have described this product as "Chocolate Flake" that term is usually applied in the chocolate or confectionery trade only to a specific type of milk chocolate bar product. Your product more closely resembles what is commonly known as "chocolate crumb", however, the composition of your product does not conform to that permitted for chocolate under the Tariff Schedules. Under the established parameters for chocolate, only chocolate liquor may be used, not cocoa powder, and the maximum sugar content in a chocolate may not exceed 60 percent by weight. This product would also not be considered as sweetened cocoa since cocoa butter is never added to that product.

This cocoa product is classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States Annotated, and dutiable at the rate of 10 percent ad valorem.

Products classifiable under this provision which contain in excess of ten percent by dry weight of cane or beet sugar and which are in a powdered or dry amorphous form are subject to an absolute quota under item 958.18, TSUS, as established by Presidential Proclamations 5294 and 5340. The current annual worldwide allocation under this quota is 84,000 short tons. It is suggested that you contact the United States Customs office at the intended port of entry regarding the current status of this quota prior to initiating any shipments.

Northern Way
Bury St. Edmunds
Suffolk
England IP32 6NL

Dear Sir or Madam:

In your letter of August 28, 1985, you requested information regarding a very wide range of products (essential oils, odoriferous substances, animal oils, etc.) manufactured in the United Kingdom.

Your inquiry is much too general and does not provide sufficient information to allow us to issue a tariff classification ruling. We do not have the resources available to answer an inquiry covering a voluminous number of items. We do not have the resources available to correctly explain the numerous possible classifications and the many complex issues inherent in the broad range of products referred to in your letter.

Ruling requests must be submitted in accordance with Part 177, Customs Regulations. A ruling request should fully describe the specific products which you intend to import. Please limit your inquiry to five products only. Your inquiry should include a sample of each product, a complete breakdown of the ingredients in each product, and detailed information on the derivation and use of each item.

For your general information, we are enclosing copies of several pages from the Tariff Schedules of the United States Annotated (TSUSA). These pages cover:

1. Items 450.10 through 450.20, Schedule 4, Part 5, Subpart A, TSUSA (non-benzenoid flavoring extracts of vegetable origin, and fruit flavors, essences, esters and oils).

2. Items 452.02 through 452.80, Schedule 4, Part 5, Subpart B, TSUSA (essential oils).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G1

3. Items 460.05 through 460.90, Schedule 4, Part 7, Subpart A, TSUSA (non-benzenoid odoriferous substances).

4. Items 412.76 through 413.40, Schedule 4, Part 1, Subpart C, TSUSA (benzenoid odoriferous substances and flavors).

5. Items 177.02 through 177.72, Schedule 1, Part 14, Subpart C, TSUSA (animal oils).

Please be advised that classification decisions for these types of products are complex and may involve different sections of the TSUSA in addition to the pages which have been submitted to you. Therefore, the enclosed pages are for general information only. If you attempt to determine the classifications for specific products based on these pages, you could easily reach incorrect conclusions. As indicated above, it may be advisable for you to request a ruling regarding the specific products which you intend to import.

If you require further assistance regarding the requirements of Part 177, Customs Regulations, please contact Mr. Jacob Bunin, National Import Specialist Assistant, telephone number (212) 466-5742.

Sincerely,

John J. Martuge
Area Director

Mr. M. Barry Levy
Sharretts, Paley, Carter & Blauvelt, P.C.
80 Broad Street
New York, NY 10004

Dear Mr. Levy:

In your letter of September 5, 1985, you requested the tariff classification of adult masks from Taiwan. Your inquiry is on behalf of your client, Ben Cooper.

You have submitted two samples of adult half-masks, both stated to be in chief value of man-made fibers. They both have a plastic backing and are designed to cover only the upper portion of the face.

The first sample is a "feline" mask resembling a cat's face. It has plastic whiskers extending from its nose, pointed ears, clover shaped ornaments on its ears, and what you describe as a plastic heart-shaped ornament in the middle of its forehead. It is noted, however, the sample submitted does not contain said heart-shaped ornament but merely a clear circular plastic disc.

The second sample is a short mask that covers only the immediate eye area. It is trimmed with sequin ornaments around each eye insert. The sequin trim also extends along the top portion of the mask along the eye area. The bottom of the mask is smooth except for a nose identation.

The masks are classifiable under the provision for articles not specially provided for, of textile materials, ornamented, other, of man-made fibers, in item 386.1343, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 15 percent ad valorem.

Articles classifiable under item 386.1343, TSUSA, which are the products of Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Marco Gubelin
Max Felchlin Inc.
Main Street 63
CH 6430 Schwyz, Switzerland

Dear Mr. Gubelin:

In your letter dated September 4, 1985, you inquired about the dutiable status of Swiss Charm Chocolate and Swiss Charm "Cream Cheese" from Switzerland.

The Swiss Charm Chocolate (UE 21E) is composed, by weight, of the following ingredients:

Chocolate Powder	83 per cent
Dextrose	8 per cent
Gelatin	7 per cent
Corn Starch	2 per cent

The Swiss Charm "Cream Cheese" (UE 22E) is composed, by weight, of the following ingredients:

Sugar	33 per cent
Dextrose	33 per cent
Curd Powder	16 per cent
Gelatin	11 per cent
Corn Starch	6 per cent
Flavor	1 per cent

Also it should be noted that this item, Swiss Charm Cream Cheese, is in chief value of the gelatin. These items are to be imported in a powder form in both 4 kilogram and 5 kilogram size pails. They are intented for use as ingredients in cakes, doughnuts and similar items, as cream fillings.

The Swiss Charm Chocolate is classifiable under the provision for edible preparations in item 183.05, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem. This rate will also apply for 1986.

The Swiss Charm Cream Cheese is classifiable under the provision for edible preparations, of gelatin in item 182.90, Tariff Schedules of the United States, and dutiable at the rate of 6 percent ad valorem. This rate will also apply for 1986.

G5

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Neither item is subject to import quotas as specified in Presidential Proclamation 5340 of May 17, 1985. Swiss Charm Chocolate, as indicated by your ingredients statement does not contain more than 10 percent by weight of cane or beet sugar and the Swiss Charm Cheese is classified under a TSUSA number not included in the quota restriction specified in the aforementioned Presidential Proclamation.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

239 Prescott Street, P.O. Box 443
East Boston, Ma. 02128

Dear Mr. Doucet:

In your letter dated September 19, 1985, you inquired about the dutiable status of a shaft of a Lacrosse Stick from Canada. A sample and descriptive literature were submitted.

The shaft measures 32 inches in length. It is 100 percent aluminum, powder-coated white, and silk-screened.

It is noted that Tariff Item 735.1700, mentioned in your letter, is the provision for Lacrosse Sticks. This provision does not provide for parts of Lacrosse Sticks.

The Lacrosse Stick shaft is classifiable under the provision for articles of aluminum, not coated or plated with precious metal, in item 657.4080, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 6.7 percent ad valorem. (The 1986 rate is 6.2 percent ad valorem.)

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Mr. Lou Borghans
Borgon, Inc.
1903 Spring Creek Road
Algonquin, IL 60102

Dear Mr. Borghans:

In your letter dated September 26, 1985, you inquired about the dutiable status of six chemical products from the Netherlands.

	TSUSA	Rate
Houtrot Stop (dryrot stop)	409.0200	7.3 percent ad valorem
Houtrot Vuller (dryrot filler)	409.0200	7.3 percent ad valorem
Polyester plamuur (polyester filler)	409.1000	0.7 cent per pound plus 9 percent ad valorem
Spuitplamuur (spray primer)	409.1800	7.4 percent ad valorem
Instant Vulmiodel (instant filler)	445.4400	4.0 percent ad valorem
Auto Plamuur (car spackle)	445.4800	6.2 percent ad valorem

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

This merchandise may be subject to the regulations of the Environmental Protection Agency, Office of Pesticides and Toxic Substances. You may contact them at 401 M Street, S.W., Washington, D.C. 20460, telpehone number (800) 424-9086.

Sincerely,

John J Martuge

Mr. Vincent Buscaglia
W.R. Filbin & Company, Inc.
1010 Niagara Street
Buffalo, NY 14213

Dear Mr. Buscaglia:

In your letter dated September 26, 1985, on behalf of Genetrex, Incorporated, you inquired about the dutiable status of seven chemical cleaning products from Canada.

"Janex" multi-surface cleaner and polish; and "Janex" 200 and "Janex" germicidal cleaners are all formulated soap products, classifiable under the provision for other soap and soap powder (including all medicinal soap and soap powder) in item 466.2500, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 0.4 cent per pound, plus 3.2 percent ad valorem.

Optimex 1 is a benzenoid detergent that is used for the removal of all forms of graffiti from masonry and other construction materials. It is classifiable under the provision for benzenoid detergents in item 409.3060, TSUSA and dutiable at the rate of 10.1 percent ad valorem.

You state that the Optimex 11-A; and 111-P and IV products are non-benzenoid detergents that are used to remove graffitti and other forms of defacement. They are classifiable under the provision for non-benzenoid detergents in item 466.3000, TSUS and dutiable at the rate of 1.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaciton.

Mr. William J. Marston
Attorney In Fact
U.S. Carriage International, Inc.
11938j Waveland Avenue
Franklin Park, Illinois 60131

Dear Mr. Marston:

In your letter of September 27, 1985, written on behalf of COE Laboratories, Inc., you requested a tariff classification ruling on a Coe-Lite Polymerization unit, a dental restorative material in 5 gram and 20 gram jars, and a kit which includes jars of Occlusin and various accessories. All the articles are to be imported from the United Kingdom.

Occlusin is an organic resin containing a glass or quartz filler which is used as a tooth restorative material. It is classifiable under the provision for dental cements, in item 495.1500 Tariff Schedules of the United States, and dutiable at the rate of 3.3 percent ad valorem.

The Occlusin Kit to be imported consists of four 5 gram jars of Occlusin, a 5 ml bottle of bonding agent, a 5 ml bottle of acid etchant, two plastic brush handles, two packages of natural bristle brush heads and a few transfer pads.

When using Occlusin, the enamel margins of the tooth cavity must first be brushed with acid etchant and subsequently, after washing and drying the cavity, the bonding agent is applied to all the etched surfaces and margins of the cavity preparation. Since the Occlusin, the bonding agent, and the acid etchant are packaged together, imported together, and serve no function except when used in conjunction with one another, they are considered a tariff entity, classifiable under the provision for dental cements, in item 495.1500, TSUS, and dutiable at the rate of 3.3 percent ad valorem.

Each brush handle together with a brush head, and the balance of the brush heads are classifiable under the provision for other brushes in item 750.7090, TSUS, and dutiable at the rate of 7.7 percent ad valorem.

The transfer pads are made of approximately 50 sheets of paper bonded together and coated. They measure 2 inches by 2 1/4 inches and serve as mixing pads for the Occlusin just before use. The transfer pads are classifiable under the provision for articles of paper not

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

specially provided for in item 256.9080, TSUS, and dutiable at the rate of 6.1 percent ad valorem.

The Coe-Lite Polymerization unit is an electrical apparatus that produces a visible ray of light used to polymerize the Occlusin. It consists of a table top component housing a tungsten halogen light source and a control/indicator panel, a fiber optic cable, and a handpiece with a 7 mm diameter optic tip. The Coe-Lite is classifiable under the provision for dental instruments in item 709.2540, TSUS, and dutiable at the rate of 5.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Clark D. Bien
Arbor Foods Incorporated
Post Office Box 7686
Ann Arbor, Michigan 48107

Dear Mr. Bien:

In your letter dated October 1, 1985, you inquired about the dutiable status of a chocolate product from Canada.

The product consists of 25 percent by weight chocolate liquor, 15 percent by weight cocoa butter and 60 percent by weight sugar. It will be imported in the form of blocks molded by 55 gallon drums and will weigh approximately 400 pounds each. The product will be sold to industrial users in the chocolate and confectionery industries.

A chocolate product with these ingredients is classifiable under the provision for chocolate, sweetened, in bars or blocks weighing 10 pounds or more each, in item 156.2500, Tariff Schedules of the United States Annotated, and dutiable at the rate of one-tenth of a cent (0.1¢) per pound. This rate will remain the same in 1986.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Bernard Anthony Garcia
Compas Group Corporation
P.O. Box #16761
Plantation, FL 33318

Dear Mr. Garcia:

In your letter of October 9, 1985, you requested the tariff classification of certain alcoholic beverages from Colombia.

The alcoholic beverages consist of three brands of Aguardiente and one Pina Colada Cocktail. Two sample bottles were received and a third arrived completely broken. The beverages are bottled in 750 milliliter containers. According to information submitted by you, the Aguardientes are distilled spirits made from sugar cane which have an anisette aroma and flavor. Two brands, the Aguardiente Regal Ice Extra and the Aguardiente Leader, have a stated proof of 64 degrees. The third brand the Aguardiente Llanero, has a stated proof of 68 degrees. The Pina Colada Cocktail has a proof of 30 degrees and consists of rum, coconut juice, pineapple juice, cream, and eight percent sugar.

The three brands of Aguardiente are classifiable under the provision for other spirits, fit for use as beverages, in containers each holding not over 1 gallon, in item 169.4400 Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of $2.56 per proof gallon. The Pina Colada Cocktail is classifiable under the provision for cordials, liqueurs, kirschwasser, and ratafia, in containers each holding not over 1 gallon, in item 168.9600, TSUSA, and dutiable at the rate of 50 cents per proof gallon.

Articles classifiable under item 169.4400 and 168.9600, TSUSA, which are the products of Colombia are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations. However, regardless of the country of origin, all distilled alcoholic beverages are subject to Federal Excise Tax (26 U.S.C. 5001) at the rate of $10.50 per proof gallon, and on proportionate parts of a proof gallon.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents

Ms. Margaret Hudson
Tex-Thai Impex
P.O. Box 79782
Houston, Texas 77279

Dear Ms. Hudson:

Your letter of October 22, 1985 requested this office to rule upon the tariff classification of nylon expandable travel bag from Thailand.

The sample submitted is a nylon double handle travel bag which measures 18" X 18" X 6". It has an expandable gusset, two outside snap pockets on the front and a full width zippered compartment on the back. The sample appears to be representative of a set of two bags.

The nylon expandable bag is classifiable under the provision for luggage and handbags, of other textile materials, other, in item 706.4152, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 20 percent ad valorem.

Tariff item number 706.4152 falls within textile category designation 670. As a product of Thailand, this merchandise is not currently subject to quota/visa restrictions based upon international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Mr. Oscar Succar
Simpex International Trading, Inc.
7630 Little River Turnpike
Suite 802
Annandale, VA 22003

Dear Mr. Succar:

In your letter of October 21, 1985, you requested the tariff classification of dehydrated bananas (Ref:001), Panela (Ref:002) and chocolate covered dehydrated bananas (Ref:003) from Colombia.

While no technical information was provided on the manufacturing process for the dehydrated bananas, it is obvious that they have been submitted to a drying process which removed most, but not all, of the moisture. The bananas were then cut into five long segments and sealed in cellophane. Each cellophane package contains ten pieces. The chocolate covered dehydrated bananas appear to be similar to the uncoated bananas except that they have been cut into pieces approximately one inch long prior to coating and packaging.

The submitted sample of panela takes the form of a dark brown solid block which measures one and one-half inches thick, by three and one-half inches wide, by four and one quarter inches long. Panela is produced by pressing sugar cane and cooking the extracted juice until a very thick consistency is achieved. This thick heated paste is cast into molds where it cools into solid blocks.

The dehydrated bananas are classifiable under the provision for bananas, prepared or preserved (dried) in item 146.4200, Tariff Schedules of the United States, and dutiable at the rate of 0.9 percent ad valorem. The chocolate covered bananas are classifiable as candy and other confectionery containing chocolate, not specially provided, for, in item 157.1045, TSUS, with duty at the rate of 7 percent ad valorem. Currently, there are no restrictions or quotas upon the importation of either of these items.

Panela is classifiable under the provision for sugar, derived from sugar cane, principally of crystalline structure or in dry amorphous form in item 155.2025, Tariff Schedules of the United States, and is dutiable at the rate of 0.6625 cent per pound. This duty rate is reduced

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A6

by 0.009375 cent per pound for every degree of polarity, and proportionate parts of a degree, under 100 degrees polarity. In addition, sugar which is not subjected to additional refining or improvements in quality in the United States is subject to a supplemental agriculture fee of 1 cent per pound. This fee is assessed under item 956.05, TSUS. Under Presidential Proclamation 4941 of May 5, 1982, quotas were established upon sugar classifiable under items 155.20 and 155.30, TSUS. The current annual quota allocation for sugar from Colombia is 82,383,000 pounds.

All of the above described articles, which are the products of Colombia, are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations. However, there is no exemption for payment of the supplemental sugar fee assessed under item 956.05, TSUS.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

for Loy K. Deweese

Ms. Anna Marie Calabria
J. Calabria Imports Inc.
P.O. Box 1914
Bloomfield, NJ 07003

Dear Ms. Calabria:

In your letter of October 21, 1985, you inquired about the quota status of Dulche de Leche from Uruguay.

Presidential Proclamation 5340 amended Presidential Proclamation 5294 to impose a quota on articles described in item 958.17, TSUS, covering "articles containing over 10 percent by dry weight of sugars derived from sugar cane or sugar beets, whether or not mixed with other ingredients, except (a) articles not principally of crystalline structure or not in dry amorphous form that are prepared for marketing to the retail consumer in the identical form and package in which imported..." provided for in items 156.45, 183.01, 183.05, TSUS.

Since your item falls into the later category as not being in a dry amorphous form and prepared for marketing to the retail consumer no quota exists for this item as described. It should be noted that any change in this item may change the quota status. Therefore any change should be specified in a binding ruling request.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)]

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Ranier, Minnesota 56668

Dear Mr. Nordstrom:

In your letter dated October 24, 1985, you inquired about the dutiable status of 4-methyl pentene-1 from Canada.

4-Methyl pentene-1 also known as 1-isohexene when produced from petroleum, shale oil or natural gas is classifiable under the provision for hydrocarbons derived in whole or in part from petroleum, shale oil or natural gas, other, in item 429.54, Tariff Schedules of the United States, and dutiable at the rate of 5 percent ad valorem.

4-methyl pentene-1 also known as 1-isohexene when produced from sources other than those indicated in the previous paragraph is classifiable in item 429.56, Tariff Schedules of the United States and dutiable at the rate of 4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Brian S. Goldstein
Tompkins and Davidson
One Whitehall Street
New York, N.Y. 10004

Dear Mr. Goldstein:

In your letter of October 28, 1985, on behalf of Glaxo, Inc., you inquired as to the dutiable status of an antibiotic drug, "Fortaz" from the United Kingdom. In addition, you ask if samples of this merchandise used to solicit orders would be classified in item 860.3000, Tariff Schedules of the United States Annotated (TSUSA).

Technical literature submitted with your inquiry indicates that "Fortaz" (ceftazidime for injection) is a semisynthetic benzenoid derived, broad-spectrum, beta-lactam antibiotic for parenteral administration. It is a sterile dry, powdered mixture of ceftazidime pentahydrate and sodium carbonate. The sodium carbonate has been admixed to facilitate dissolution. The product will be imported in injectible glass vials containing 500 mg., 1 gram, 2 gram and 6 gram quantities of "Fortaz".

"Fortaz" is classifiable under the provision for benzenoid antibiotics, other, in item 411.7600, TSUSA and dutiable at the rate of 8.1 percent ad valorem.

With regards to the samples that will be used to solicit orders, you state that they will be imported in injectible glass vials containing 1 gram of "Fortaz" that will be packaged in paper boxes that hold 25 vials. Each vial although valued over $1.00 will be marked in red "Professional Sample - Not For Sale", the paper boxes will also be so marked. The samples are to be distributed to doctors free of charge for the purpose of soliciting orders.

The sample and paper box you submitted have been examined and they are marked as described in the previous paragraph. Accordingly, we find that item 860.3000, TSUSA, provides for duty-free treatment of "any sample valued at $1.00 and under, and also provides similar treatment for samples marked so they are unsuitable for sale or for use otherwise than as samples...". However, the District Director at the port(s) of entry may require that an affadavit be attached to your entry, certifying that the conditions described in item 860.3000, TSUSA, have been met.

Please be advised that a copy of this ruling should be attached

Ms. Joyce Dugan, Import Department
Hensel, Bruckman and Lorbocher, Inc.
P.O. Box S - JFK Airport Station
Jamaica, NY 11430

Dear Ms. Dugan:

In your letter dated October 23, 1985, you inquired on behalf of your client Goemer International Corporation about the dutiable status of various seaweed extracts from Denmark.

According to your inquiry the samples submitted are all to be used as ingredients in cosmetics. Our laboratory has determined that Calendula C-571 is a mixture of Calendula plant extract and propylene glycol and that Glycolic extract A 464, DS 574, LS 520 contain seaweed extract and propylene glycol. Glycolic extract, FS 521 in addition to seaweed extract and propylene glycol also contains methyl alcohol. Lastly GYFA 15 was determined to be an aqueous solution of seaweed extract, consisting in part of polypeptides.

Based on this information Calendula C-571, A 464, glycolic extract DS 574 and LS 520 are classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be propylene glycol classifiable under item 428.30, Tariff Schedules of the United States, and dutiable at the rate of 11.5 percent ad valorem.

Glycolic extract FS-521 is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be methyl alcohol classifiable under item 427.97, Tariff Schedules of the United States, and dutiable at the rate of 18.4 percent ad valorem.

GYFA 15 is classifiable under the provision for mixtures, not specifically provided for in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 4.1 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be polypeptides classifiable under item 425.52, Tariff Schedules of the United States, and dutiable at the rate of 7.9 percent ad valorem.

40 Avenue A
Bayonne, N.J. 07002

Dear Mr. Kruger:

In your letter dated October 11, 1985, you inquired about the dutiable status of a blend of hydrogenated castor oil and hydroxystearamide from Brazil.

According to your letter this blend cannot be used in food but is designed for use as a rheological additive in paints.

Based on this information a blend of 75 percent hydrogenated castor oil and 25 percent hydroxystearamide is classifiable under the provision for mixtures, not specifically provided for in item 432.25, Tariff Schedules of the United States, and dutiable at the rate of 4 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be hydroxystearamide which is classifiable in item 465.15, Tariff Schedules of the United States, if derived from coconut, palm-kernel or palm oil and is dutiable at the rate of 1.1 cents per pound plus 5.3 percent ad valorem. If hydroxystearamide is derived from other sources, it is classifiable in item 465.20, TSUS, and dutiable at the rate of 1.2 cents per pound plus 5.3 percent ad valorem.

Articles classifiable in item 432.25 TSUS, which are the products of Brazil are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Amos N. Hoagland
Hoag-Co
1062 North Vinedo Avenue
Pasadena, CA 91107

Dear Mr. Hoagland:

In your letter dated October 29, 1985, you inquired about the dutiable status of components for tennis ball baskets from Taiwan. A sample was submitted.

The end product is a basket that is utilized in tennis for picking up tennis balls on the ground, and as a stand for storing tennis balls while practicing. The basket itself is divided into several compartments and components. You indicate that the top and bottom frames, the lids and the plastic handle grips are of United States origin. The imported parts consist of the steel handles, the end frames, and the side frames. After importation, these parts are integrated via welding with the United States components to form the final product. The baskets are used as an aid by coaches and others in practicing and in maintenance.

The steel tennis ball basket components are classifiable under the provision for articles of iron or steel, not coated or plated with precious metal, in item 657.2590, Tariff Schedules of the United States, and dutiable at the rate of 6.7 percent ad valorem. (The 1986 rate is 6.2 percent ad valorem.)

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director

Mr. John P. C. Matthews
East Europe Trade Associates
87 Lovers Lane
Princeton, NJ 08540

Dear Mr. Matthews:

In your letter dated October 25, 1985, you inquired about the dutiable status of extracts, concentrates and syrups from Hungary. Technical information was submitted for our review.

The products identified as Rose-hips syrup, Viroma syrup, Diviroma syrup, Morella syrup and Szamba syrup are classified as non-benzenoid drugs, other, in item 439.5095, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 3.7 percent ad valorem.

The Safflower concentrate and the Black Malva extract are substances that are used for coloring food stuffs, wines and medicines, among other similar type products.

The Safflower concentrate is classifiable under the provision for dyeing and tanning products, other, in item 470.1800, TSUSA, with duty at the rate of 3.2 percent ad valorem.

The Black Malva extract is classifiable under the provision for products of vegetable origin used chiefly for coloring or tanning, not specially provided for, other, in item 470.8500, TSUSA, dutiable at the rate of 3.2 percent ad valorem.

Regarding the Burdock, Horse Chestnut, Hazelnut and Sumac extracts, your inquiry does not provide sufficient information for us to issue a ruling for these products. Requests for rulings must be submitted in accordance with Part 177, Customs Regulations. Therefore, please submit the chemical name of each product, the percentage of each substance comprising each product, and the use of each substance in each product. If you have samples of these extracts, please forward them to this office.

With respect to the Rose-hips, Viroma, Diviroma and Morella syrups, and the Black Malva extract and Safflower concentrate, this is a ruling issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1).

B2

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

W.Y. Moberty, Inc.
Port of Sweetgrass, Montana 59484

Dear Mr. Lanius:

In your letter dated November 4, 1985, on behalf of Premiere Livestock Supplies, Limited, you inquired about the dutiable status of "Aureo S700G", granular premix from Canada.

"Aureo S700G" is used in the manufacture of beef cattle feeds. It aids in the maintenance of weight gains and feed efficiency in cattle during periods of weaning, shipping or handling. The product is a granular premix containing chlortetracycline (a non-benzenoid antibiotic) and sulfamethazine (a benzenoid anti-infective agent) as the active ingredients which are blended with a carrier (calcium sulfate).

"Aureo S700G", granular premix is classifiable under the provision for benzenoid anti-infective agents, other, other in item 411.9600, Tariff Schedules of the United States, and dutiable at the rate of 8.1 percent ad valorem. In 1986 the rate is the same.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

This product may be subject to the regulations of the Food and Drug Administration. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20857, telephone number (202) 443-3380.

Mr. Glenn R. Levitt
Associated Customhouse Brokers, Inc.
P. O. Box 14296, Federal Station
Rochester, NY 14614-0296

Dear Mr. Levitt:

In your letter dated November 8, 1985, you inquired about the dutiable status of Aproten, Dietary Imitation Macaroni Products and Rusks from Italy.

The Aproten Dietary Imitation Macaroni Products are composed of; corn starch, tapioca starch, micro-crystalline cellulose, distilled monoglycerides and saffron. They are marketed in four varieties:

1) Rigatini
2) Ditalini
3) Tagliatelle
4) Anellini

The Rigatini and Ditalini varieties are a low protein imitation macaroni product in a long and short form similar in appearance to elbow macaroni. They can be eaten hot with melted butter, oil and herbs, sauces, and in casseroles, as well as eaten cold in aspic or waldorf salads. The Tagliatelle is a low protein wide variety imitation noodle similar in appearance to commonly known noodles and egg noodles. It can be eaten hot with a sauce or with butter and herbs and included in any typical recipe calling for noodles. The Anellini variety is also a low protein imitation macaroni product similar to vermicelli. It is intented for use in soups, broth, bouillon or in desserts to give the same effect as tapioca or rice. All the varieties are prepared in the same manner as any pasta product by adding them to boiling water, stirring frequently until tender for 8-11 minutes and then serving. They are intented for consumption as pasta or macaroni for people on a protein restricted diet. These items differ from macaroni or pasta only in that they are derived from corn and tapioca starches rather than wheat flour.

The Rusks are slices of low protein, yeast leavened starch bread which have been dried and toasted. They are marketed in wrapped sealed packets with a total of 24 slices per box weighing a total of 200 grams. These Rusks are a dietary substitute for bread for persons on a protein restricted diet.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

BS

The imitation macaroni products are classifiable under the provision for macaroni, noodles, vermicelli, and similar alimentary pastes not containing egg or egg products in item 182.35, Tariff Schedules of the United States, and dutiable at the rate of 40 percent ad valorem.

The Rusks are classifiable under the provision for bread made with the use of yeast as the leavening substance in item 182.25, Tariff Schedules of the United States, and are free of duty.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Garrett Hewitt International, Inc.
901 N. Broadway/Suite 16
No. White Plains, NY 10603

Dear Ms. Garrity:

In your letter of November 11, 1985, you requested the tariff classification of a plastic eye mask from Hong Kong.

A sample of the plastic face mask was submitted with your request. The pink compress pack contains a liquid chemical which after insertion in hot/cold water provides a soothing relief for headaches or eye irritation. In your letter you indicate that the pink compress pack is in chief value of plastic.

This product is subject to the regulations of the Food and Drug Administration. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20857, telephone number (202) 443-3380.

The mask must be marked with the country of origin in a permanent, legible and conspicuous manner.

The plastic face mask is classifiable under the provision for household articles not specially provided for, of rubber or plastics, in item 772.1500, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 4.7 percent ad valorem. The rate of duty for 1986 will be 4 percent ad valorem.

Articles classifiable under item 772.1500, TSUSA, which are the products of Hong Kong are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Ned Marshak
Sharretts, Paley, Carter & Blauvelt, P.C.
80 Broad Street
New York, NY 10004

Dear Mr. Marshak:

In your letter dated November 14, 1985, on behalf of Dason International, Inc., you inquired about the dutiable status of a "Wind and Sun Shade" from Taiwan.

A sample accompanied your letter and has been retained by this office. The article consists of an oval-shaped piece of nylon taffeta fabric, approximately 74 inches long and 69 inches wide, 18 fiberglass (i.e., fiberglass reinforced plastic) pole sections, four non-reinforced plastic stakes, and a 6 1/2 foot length of man-made fiber rope with an S-shaped metal fitting. The component material in chief value is said to be the fiberglass poles. The product is designed to be used at the beach where, when assembled, it forms a semi-circular awning and provides protection from the wind and sun.

The shade is imported and sold with a nylon "rucksack" carrying bag. The latter is manufactured of 420 denier nylon, and has a braided man-made fiber rope which forms both the shoulder sling and drawstring closure. It is similar in shape to a duffle bag or stuff bag. The bag is designed so that the user may carry the shade from place to place. A clear, polyvinyl chloride bag accompanying the sample appears to be the merchandising container as well as storage bag for the rucksack and shade, when purchased and kept at home.

The rucksack is not a container of the type usually sold at retail with a shade. It is like a "haversack" or "stuff bag" which is commonly used in outdoor sports. A haversack is defined in Webster's Dictionary as "a bag or case similar to a knapsack but usually worn over one shoulder."

The term "luggage" is defined in Headnote 2(a)(i), Schedule 7, Subpart 1D, Tariff Schedules of the United States (TSUS), to include "...travel goods such as ...travel bags...knapsacks...haversacks, duffle bags and like articles designed to contain...other personal effects during travel"(emphasis added). The instant nylon rucksack satisfies this definition in that it is designed to contain a personal effect during travel and is "like" a knapsack, haversack, traveling bag, or duffle bag. In United States v Standard Surplus Sales, Inc.,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B9

69 CCPA 34, Appeal No. 81-13 (1981), the court held bags such as rucksacks and haversacks were luggage.

The sack would not be considered an entirety with the Wind and Sun Shade inasmuch as it performs no function in the actual use of the shade, but is merely an accessory for transporting it, much the same as any other pack. In this instance it is supplied to the user as a convenience. In addition, the shade and rucksack, when imported together, do not form a new entity. Each retains its individual indentity. The rucksack has a character and use much more than a mere storage bag. In fact, a separate vinyl bag is supplied for storage purposes.

The Wind and Sun Shade, consisting of the shade fabric, fiberglass poles, plastic stakes, and rope, is classifiable under the provision for articles not specially provided for, of rubber or plastics...other, in item 774.5595, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 5.7 percent ad valorem.

The "rucksack" carrying bag is classifiable under the provision for luggage of other textile materials, wholly or in part of braid, in item 706.3420, TSUSA, and dutiable at the rate of 10 percent ad valorem.

The rucksack falls within textile category designation 670. As a product of Taiwan this merchandise is subject to quota and visa restrictions based upon international textile trade agreements.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

30 West Service Road
Champlain, New York 12919-9703

Gentlemen:

In your letter dated November 14, 1985, you inquired on behalf of your client, Modern Air Laboratories Inc. of Quebec, Canada about the dutiable status of a toilet bowl cleaner from Canada.

The toilet bowl cleaner consisting of a detergent, dye, and water is contained in a 350 ml (12 fl. oz.) plastic bottle having a metal clip designed to hold this plastic bottle upside down in the tank of a toilet. The toilet bowl cleaner is advertised as continuous action-automatic cleaner, cleaning and deodorizing with every flush.

Toilet bowl cleaners with this type container are classifiable under the provision for blackings, powders, liquids, and creams for polishing and cleaning, all the foregoing in immediate containers holding not over 10 pounds each in item 493.1000, Tariff Schedules of the United States, and dutiable at the rate of 2.6 percent ad valorem.

The sample submitted did not indicate the Country of Origin. It would be appropriate to mark "Made in Canada" in the same proximity and in the same letter size as the domestic (U.S.A.) name and address indicated on the label.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. F. B. Michels
President
Remtek Corporation
46107 Landing Parkway
Fremont, CA 94538-6471

Dear Mr. Michels:

In your letters dated November 14, 1985 and January 2, 1986, you inquired about the dutiable status of heat shrinkable sleeves from Switzerland.

Descriptive literature accompanied your second letter. The products are heat shrinkable, medium wall, seamless polyolefin plastic tubings imported in four foot lengths. They will be used to insulate, protect, and support electrical connections. Some tubings will be coated on the inside walls with a hot melt adhesive, which melts and flows during the shrinking process, filling voids and creating a waterproof seal. The coating operation is a separate process, occurring after the tubings have been formed.

In your letter, you suggested the merchandise be classified in item 773.3000, Tariff Schedules of the United States Annotated (TSUSA), the provision for electric insulators of plastic. The sleeves, imported in four foot lengths, are not electric insulators themselves, but rather material from which insulators may be fashioned. Moreover, it is clear from the product literature that the sleeves are intended to provide environmental protection and mechanical support, as well as insulation, to electrical connections. Item 773.3000, TSUSA, will therefore not apply.

A second tariff provision you referred to, item 771.5500, TSUSA, the provison for other seamless tubing, cannot apply to those tubings with the hot melt adhesive. Schedule 7, Part 12, Subpart B, Headnote 2(v), excludes from this provision tubing which has been made or cut into lengths measuring not over 15 inches, or which has been ground on the ends, drilled, milled, or otherwise processed (except surface processed). Since the sleeves have been subjected to a separate process to coat the inside walls with an adhesive, they have been "otherwise processed" within the meaning of this headnote, and are not classifiable in item 771.5500, TSUSA.

The heat shrinkable sleeves without adhesive are classifiable under the provision for seamless tubing, in item 771.5500, TSUSA and dutiable at the rate of 6.3 percent ad valorem.

B13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The heat shrinkable sleeves with hot melt adhesive are classifiable under the provision for articles not specially provided for, of rubber or plastics...other, in item 774.5595, TSUSA, and dutiable at the rate of 5.7 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Division Manager, Protective Coatings
Sika Corporation
875 Valley Brook Avenue
Lyndhurst, NJ 07071

Dear Mr. Harms:

In your letter dated October 7, 1985, you inquired about the dutiable status of two liquid coating products from West Germany.

Icosit 200 is a two component epoxy coating. Component A is a mixture containing coal tar oil 19 WT%, cyclo-aliphatic amine 10 WT%, phenylphenol 5WT%, cationic treated clay 1WT%, amorphous carbon (carbon black) 2 WT%, calcium magnesium silicate 7 WT%, and barium sulfate 56 WT%. Component B is bisphenol A epoxy resin 100 WT.%. Component A and component B are to be mixed in a 4.3 to 1.0 ratio and applied by liquid spray.

Icosit 200 is classifiable under the provision for benzenoid epoxy resins in item 409.0200, Tariff Schedules of the United States Annotated, and dutiable at the rate of 7.3 percent ad valorem. In 1986, the rate will be 6.7 percent ad valorem.

Icosit 600 is a two component polyurethane based 100 percent solids coating. Component A is a mixture containing polyester polyol 31WT%, polyether polyol 12WT%, Amorphorus carbon (carbon black) 3WT% and calcium carbonate 54WT%. Component B is diphenylmethane diisocyanate (MDI) 100WT%. Component A and Component B are to be mixed in a 3.0 to 1.0 ratio and applied as a liquid spray.

Icosit 600 is classifiable under the provision for benzenoid polyurethane resins in item 409.1400, Tariff Schedules of the United States Annotated, and dutiable at the rate of 7.6 percent ad valorem. In 1986, the rate will be 7.0 percent ad valorem.

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

The merchandise may be subject to the regulations of the Environmental Protection Agency, Office of Pesticides and Toxic Substances.

Mr. J. M. Cline, Vice President
John V. Carr & Sons, Incorporated
P.O. Box 479-A
Detroit, MI 48232-0479

Dear Mr. Cline:

In your letter dated November 19, 1989, on behalf of your client, Apico Incorporated, you inquired about the dutiable status of engine starting fluid from France.

According to your letter, the product is sprayed into the air intake units of either gasoline or diesel engines during cold weather.

Engine starting fluid containing acetone which is benzenoid derived is classifiable under the provision for mixtures, not specifically provided for in item 407.16, Tariff Schedules of the United States, and dutiable at the rate of 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be benzenoid-derived acetone classifiable under item 406.64, Tariff Schedules of the United States, and dutiable at the rate of 0.3 cents per pound plus 18.7 percent ad valorem.

Engine starting fluid containing acetone which is not benzenoid derived is classifiable under the provision for mixture, not specifically provided for in item 430.10, Tariff Schedule of the United States, and dutiable at the rate of 5 percent ad valorem, but not less than the highest rate aplicable to any component material. The component with the highest rate appears to be organic nitrate classifiable under item 425.52, Tariff Schedules of the United States, and dutiable at the rate of 7.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Bill McGehee
House of Lloyd, Inc.
11901 Grandview Road
Grandview, MO 64030

Dear Mr. McGehee:

In your letter dated November 22, 1985, you inquired about the dutiable status of a "Giant Clock" take-apart puzzle from Hong Kong.

A sample of the "Giant Clock" was submitted with your inquiry. The article is a plastic toy clock which can be dismantled by a child. The face of the clock has removable numbers in various shapes and colors. The words "minute" and "hour" are embossed on the removable hands. A clear plastic center reveals cams and gears of various sizes and colors. The face, numbers, bells, and cams are removable and easily put together again by a child. A clock work spring mechanism activates the clock movement.

You contend that the article is properly classifiable under the provision for puzzles in item 735.2020, TSUSA. In Fedtro, Inc. v. United States, CD 4548 (1974), the Customs Court stated:

> The principle is well settled that where an article is in character or function something other than as described by a specific statutory, provision either more limited or more diversified and the difference is significant, it cannot find classification within such provision. It is said to be more than the article described in the statute.

We believe that the clock hands and the corresponding hour and minute readings make the clock puzzle more than a puzzle for the purposes of tariff classification.

The "Giant Clock" is classifiable under the provision for other toys in item 737.9555, Tariff Schedules of the United States Annotated, and dutiable at the rate of 9.6 percent ad valorem. In 1986 the rate will be 8.3 percent ad valorem.

Mr. Thomas Czubak
Administrator, Customs & Export
Warner-Lambert Company
P.O. Box 505
Morris Plains, NJ 07950

Dear Mr. Czubak:

In your letter dated November 15, 1985, you inquired about the dutiable status of zolazepam hydrochloride and tiletamine hydrochloride from The United Kingdom.

Zolazepam hydrochloride, a white powder, is a benzenoid sedative type drug. Tiletamine hydrochloride, a white crystalline powder, is used for its anesthetic properties, In addition, it also has anticonvulsive properties. After importation, the products will be blended together for vetinarian use as a general anesthetic.

Zolazepam hydrochloride is classifiable under the provision for benzenoid sedatives in item 412.2600, Tariff Schedules of the United States, and dutiable at the rate of 8.6 percent ad valorem. In 1986 the rate will be 7.8 percent ad valorem.

However, your inquiry does not provide enough information for us to give a classification ruling on tiletamine hydrochloride. Your request for a classification ruling should include its chief use in the United States. In addition, please document whether or not this product is used as an anticonvulsant drug.

Based upon the information you submitted, tiletamine hydrochloride would probably be classified under the provision for drugs primarily affecting the central nervous system, other, in item 412.4000, Tariff Schedules of the United States Annotated, with duty at the rate of 7.6 percent ad valorem. In 1986 the rate will be the same.

With respect to the zolazepam hydrochloride, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)]. For the balance of the merchandise, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations [19 C.F.R. 177.1 (d)(2)].

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Mr. Danny A. Sanchez
Castelazo & Associates
5420 West 104th Street
Los Angeles, CA 90045

Dear Mr. Sanchez:

In your letter dated November 26, 1985, on behalf of Stonewall Trading, you inquired about the dutiable status of a plastic sandal from Taiwan. A sample was submitted.

The item in question, style #3021, is an all-plastic sandal with a molded, unlined, low-wedge concave-shaped bottom and a Y-shaped one piece upper which is secured to the bottom with plugs. The bottom is roughly 1/4 - inch thick in the front and increases to about 5/8 - inch thick in the center of the heel, rising to about one inch thick at the outer edges.

You asked whether this item is classifiable under the tariff provision for zoris, item 700.54, TSUS.

Among the criteria used by Customs is classifying footwear as zoris is the requirement that such footwear have a flat sole or bottom of uniform thickness. Since the sole on this sandal is neither flat nor of uniform thickness, classification as a zori is precluded.

This sandal is classifiable under the provision for other footwear which is over 50 percent by weight of rubber or plastics having uppers of which over 90 percent of the exterior surface area is rubber or plastics (except footwear having foxing or a foxing-like band applied or molded at the sole and overlapping the upper), in item 700.56, Tariff Schedules of the United States, and dutiable at the rate of 6% ad valorem.

We note that the sample is prominently marked on a label "Styled in Italy", while the country of origin is Taiwan. We believe that this marking would mislead the ultimate purchaser into believing that this item is a product of Italy. In accordance with Section 134.46, Customs Regulations, this item must be properly marked "Made in" or "Product of" Taiwan in close proximity to the "Styled in Italy" notation.

Mr. M. Suzuki
Sumitomo Corporation of America
345 Park Avenue
New York, NY 10154

Dear Mr. Suzuki:

In your letter dated December 2, 1985, you inquired about the dutiable status of Hytrel from Japan.

Hytrel is a polyester elastomer with properties that are similar to rubber. For the purposes of the tariff schedules the term rubber means a substance, whether natural or synthetic, in bale, crumb, powder, latex, or other crude form that can be vulcanized or otherwise cross-linked, and after cross-linking can be stretched at 68°F. to at least three times its original length and that, after having been stretched to twice its original length and the stress removed, returns within 5 minutes to less than 150 percent of its original length. Since Hytrel can not be vulcanized or otherwise cross-linked, it is not a rubber for tariff purposes. Hytrel is considered to be a benzenoid plastics materials.

Hytrel is classifiable under the provision for plastics materials: thermoplastic resins: polyester resins, saturated, in item 408.6800, Tariff Schedules of the United States, and dutiable at the rate of 1.4 cents per pound plus 9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Ms. Roberta Witschger
Lebo
60 West Street
Bloomfield, N.J. 07003-4998

Dear Ms. Witschger:

In your letter dated December 3, 1985, you inquired about the dutiable status of a leatherette cassette carrying case from Taiwan.

You have submitted a sample of the carrying case in its finished and unfinished condition. The case is designed to hold 12 audio cassettes. It is designed so that the user may transport cassettes from one place to another. The case is an attache like design made of padded leatherette vinyl and is fitted with a molded plastic tray having 12 sections. The top flap is secured by a tuck lock and the case is carried by a molded plastic handle. The body of the case is formed by riveting of two end panels to one main panel. Each panel is formed by cutting sections of leatherette, foam and cardboard which are glued and stitched with PVC binding. You intend to affix the rivets, handle, tuck lock and tray after the body is imported. In a telephone interview you have advised this office that the hardware is of foreign origin.

In its condition as imported, the unfinished carrying case would be considered classifiable as a finished product as provided by General Headnote 10(h), Tariff Schedules of the United States (TSUS). This Headnote provides that a tariff provision covers an article whether assembled or unassembled, and whether finished or unfinished.

The cassette carry case, whether imported finished or unfinished is classifiable under the provision for luggage, of other materials, other in item 706.6245, Tariff Schedules of the United States, and dutiable at the rate of 20 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the

P.O. Box 651555
Miami, FL 33265-1555

Dear Ms. Reyes:

In your letter of December 2, 1985, you requested the tariff classification of "Powerful" from Guatemala.

The prospective import, "Powerful" is a cleaner and deodorizer advertised to clean floors, kitchens, bathrooms, walls, toilet bowls, etcetera. The product will be imported in 16 and 32 ounce containers.

"Powerful" is classifiable under the provision for blackings, powders, liquids, and creams for polishing and cleaning, all the foregoing in immediate containers holding not over 10 pounds each in item 493.1000, Tariff Schedules of the United States, and dutiable at the rate of 2.6 percent ad valorem. Effective January 1986, the rate of duty is reduced to 2.5 percent ad valorem.

We note your label with country of origin indicated. We suggest that where a domestic (U.S.A.) address is shown, immediately following such an address, the country of origin (Made in Guatemala) be indicated in approximately the same size lettering.

Articles classifiable under item 493.1000, TSUS, which are the products of Guatemala are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. G. Maceikonis
Gilette Foods Inc.
31 Evans Terminal
Hillside, NJ 07205

Dear Mr. Maceikonis:

In your letter dated November 19, 1985, you inquired about the dutiable status of certain flavor compounds from West Germany.

These flavor compounds are destined to be used in the commercial production of a variety of food and drink products in the United States. Information was submitted on one variety of orange flavor compound (code 1196/20178) and three versions of caribic flavor compound (codes 1196/20155, 1196/20034, and code 102512). Samples of the four different varieties of flavor compounds were submitted along with your letter. These samples were referred to our laboratory for analysis. It was determined that the submitted samples were not characteristic of concentrated fruit juices, fruit essences, or fruit extracts. Analysis revealed these products to be mixtures containing small quantities of diluted fruit juices, water, invert sugars, and acidulants such as citric acid. While these mixtures contained less than 50 percent invert sugars, those sugars were determined to be typical of those generally produced from cane or beet sugar.

These flavor compounds are classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem. Products classifiable under the provision which contain in excess of 10 percent by dry weight of sugars derived from cane or beet sources and which are not prepared for sale to the retail consumer in the identical form and package in which imported are subject to a quota established by Presidential Proclamations 5294 and 5340. This quota is administered under item 958.18, TSUS, which restricts importations of such products to a total of 84,000 short tons each year commencing on the first day in October. Should these products be prepared by utilizing a sweetener not derived from cane or beet sources they would not be subject to this restriction.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Dear Mr. Hall:

In your letter dated November 26, 1985, on behalf of your client, Wholesale Supply Co., Inc., you inquired about the dutiable status of a "Fun Sled" from Taiwan.

The "Fun Sled", item number 32685LTT, illustrated in a photograph accompanying your inquiry is a 20 gauge polyvinyl chloride (P.V.C.) sheet shaped in the form of a sled. The item has two side handles and one double front handle. A valve is provided to inflate the vinyl with air. The sled is designed for multi-purpose recreational activities on snow covered surfaces.

The "Fun Sled", item number 32685 LTT, is classifiable under the provision for pneumatic mattresses and other inflatable articles not specially provided for in item 790.3900, Tariff Schedules of the United States Annotated, and dutiable at the rate of 4.2 percent ad valorem in 1985 and 1986.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Ned H. Marshak
Sharretts, Paley, Carter & Blauvelt, P.C.
80 Broad Street
New York, NY 10004

Dear Mr. Marshak:

In your letter of December 11, 1985, on behalf of your client, Amtoy, you requested the dutiable status of a plush toy animal figure produced in Taiwan.

A sample submitted with your inquiry consists of a 24 inch plush stuffed figure identified as "My Pet Monster." This fictional character features a large protruding snout, bulbous eyes, large fang-like teeth and horns that extend from its head. The monster's arms are connected by a simulated link chain made of felt material.

The pronounced fictional or non-earthly features of "My Pet Monster" give it the appearance of an inanimate object as that term is defined in headnote 3 of Schedule 7, Part 5, Subpart E of the tariff schedules.

Accordingly, "My Pet Monster" is classifiable under the provision for stuffed toy figure of inanimate objects, not having a spring mechanism in item 737.47, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 8.3 percent ad valorem.

Articles classifiable under item 737.47, TSUS, which are the product of Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

The sample will be available for pick up upon your receipt of this letter.

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Border Brokers Inc.
Edmonton, Alberta
Canada T5J 3P4

Dear Mr. Loftus:

In your letter dated December 5, 1985, you inquired about the dutiable status of five bee pollen products from Canada. Your client is Alberta Apiary Products Ltd. of Canada.

Royal Jelly will be imported in 100mg. capsule form. The ingredients are 100 percent pure Royal Jelly.

Pollen/Lecithin will be imported in 250mg. capsule form. The ingredients are bee pollen, safflower oil, lecithin, and honey. The directions recommend taking one to two capsules each day.

Bee Pollen Tablets will be imported in tablet form. The ingredients are 500mg. bee pollen, 10mg. honey, and 5mg silicon dioxide.

Bee Pollen will be imported in 250 gram dose form. The ingredients are 100 percent raw bee pollen granules. The directions indicate if you suffer from allergies, consume 1/8 of a teaspoon once daily and then increase the amount taken slowly.

Honey with pollen and royal jelly added will be imported in an unspecified form. The ingredients are honey, pollen, and royal jelly.

Royal Jelly is classifiable under the provision for any of the products provided for in this subpart when imported in ampoules, capsules, jubes, lozenges, pills, tablets, troches, or similar forms, including powders put up in medicinal doses, in item 440.0000, Tariff Schedules of the United States, and dutiable at the rate of 3.9 percent ad valorem.

Pollen/Lecithin and Bee Pollen Tablets are classifiable under the provision for edible preparations not specially provided for: other, in item 183.0520, Tariff Schedule of the United States, and dutiable at the rate 10 percent ad valorem.

Bee Pollen is classifiable under the provision for vegetable substances, crude, not specially provided for; other, in item 193.2560, Tariff Schedule of the United States, and is free of duty.

Mr. R. L. Giesler
Wilbur-Ellis Company
1 Dag Hammarskjold Plaza
New York, NY 10017

Dear Mr. Giesler:

In your letter dated December 11, 1985, you inquired about the dutiable status of Norse Fish Powder from Norway.

Norse Fish Powder is described as "a stable protein concentrate produced from whole fish with nearly all of the water and part of the oil removed." The product is manufactured by first heating the fish for 25 minutes at 70 to 90 degrees, then pressing the fish to produce a presscake of fish and a press liquid. The press liquid contains oil. some soluble proteins, and minerals. After removing the oil, the liquid is concentrated and added back to the presscake. The presscake is dried and then milled to its final powder form.

Norse Fish Powder is produced from any of four fish species. An average chemical composition for each species is provided as follows:

	Herring (percent)	Sprat (Percent)	Blue Whiting (percent)	Capelin (percent)
Protein	75	75	68	71
Fat	10	8	7	11.5
Moisture	6.5	7.5	7	6
Salt	2	1.3	3	1.8
Ash	11.5	10.8	18	10.7

This product is a brown powder with a fish taste and odor. It may be used as a cheap, protein-rich fish flavoring for dried fish soups, in snacks, in tablet form as a food supplement, or in pharmaceuticals. This powder will be imported in 3-layer laminated paper and plastic bags, in which the outer bag is closed by sewing and the inner bag by heat sealing. Each bag is designed to hold 25 kilograms of product. It is assumed that these bags are airtight containers for tariff purposes.

Norse Fish Powder is classifiable under the provision for "fish, prepared or preserved in any manner, not in oil, in airtight containers" in Part 3C of Schedule 1, Tariff Schedules of the United States Annotated (TSUSA). If produced from herring species (that is, from Clupea spratus or Clupea harengus), this product would be classified under the provision

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D8

for other herring in item 112.1200, TSUSA, with duty at the rate of 0.1 percent ad valorem. Fish powder produced from Blue Whiting (Gadus poutassou) of Capelin (Mallotus villosus) is classifiable under the provision for other fish in item 112.3640, TSUSA, with duty at the rate of 6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Hayes E. Gahagan
U.S. Development Corporation
8900 Keystone Crossing
Suite 390
Indianapolis, Ind. 46240

Dear Mr. Gahagan:

In your letter dated December 9, 1985, you inquired about the dutiable status of a sweetener product from Canada.

This proposed sweetener product will be manufactured by combining approximately one part cane or beet sugar with three parts of high fructose corn syrup to produce a blended syrup with a moisture content of approximately 25 percent. The water portion of this syrup will be reduced by evaporation resulting in a dry solid mass which will be ground into a fine powder. Each individual granule of that powder will be an intimate blend of the constituent corn syrup solids and cane or beet sugar.

This sweetener product is classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

Products classifiable under item 183.0520, TSUS, which contain over 10 percent by dry weight of cane or beet sugar which are in a dry amorphous form such as a powder are currently subject to an absolute quota as established by Presidential Proclamations 5294 and 5340. This quota is administered under item 958.18, TSUS, which restricts annual worldwide importations of such products to 84,000 short tons commencing on the first day of October each year. Those products classifiable under item 183.0520, TSUS, which contain in excess of 65 percent by dry weight of cane or beet sugar, are currently completely prohibited from entry under the restriction of item 958.15, TSUS, which was established by Presidential Proclamation 5071 of June 28, 1983.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Mr. William A. Stevenson
Wolf D. Barth Co., Inc.
721 Chestnut Street
Philadelphia, Pa. 19106-2392

Dear Mr. Stevenson:

In your letter of December 9, 1985, you requested this office to rule on the tariff classification of a number of plastic boots manufactured by Dunlop in England on behalf of your client, Taftco, Inc.

Eight(8) sample boots were submitted with your inquiry in various styles and sizes for men, women, and children. You indicated in your letter that all of these boots, with the exception of Item No. 8840, were of molded PVC and Import Specialist James Sheridan recently received a telephone call from your office advising that you had been notified by Taftco, Inc., that all of the textile linings in these boots were PVC as well.

However, since the linings are a critical factor in the classification of these boots, we submitted four(4) samples to our Customs Laboratory here in New York and were advised of their findings as follows:

Nylon knit linings were found in Styles 8840, 6342, and 6258.

Polyester knit lining was found in Style 6258I.

In line with the above, all eight(8) of the styles submitted are classifiable under the provision for footwear which is over 50% by weight of rubber or plastics; the upper of which is of molded construction; which has soles and uppers of which over 90% of the exterior surface area is rubber or plastics; and which is protective against water, oil, grease, or cold or inclement weather, in item 700.5320, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 37.5 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D12

Please note that in order to be eligible for classification in item 700.5100, TSUSA, dutiable at 7.3 percent, these boots would have to have soles and uppers of which over 90% of the exterior surface area is polyvinyl chloride, and either be unlined, or else, lined with a polyvinyl choride material whether in a sheet or in a fibrous state.

As requested, your samples are being returned under separate cover.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Jochen M. Witt
Zwicker Knitting Mills
489 Fifth Avenue
New York, NY 10017

Dear Mr. Witt:

Your letter of December 17, 1985 requested this office to rule upon the tariff classification of gloves from Taiwan.

Four pairs of glove/mittens were submitted with your inquiry -- styles 9335, 9336, 9337, and 9338. They are made from 100% acrylic knit fabric. On each of the four styles there is a full length thumb, but the other four fingers are cut off at the knuckles. Style 9338 contains thereon decorative embroidered stitches and applique. There are pouches sewn to each glove/mitten which can be folded over to cover the four exposed fingers. Sewn to the pouches of styles 9336, 9337, and 9338 are pompons. For tariff purposes, styles 9336, 9337, and 9338 are considered ornamented.

Styles 9336, 9337, and 9338 are classifiable under the provision for gloves of man-made fibers, made from pre-existing fabrics, ornamented, in item 704.3215, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 21.7 percent ad valorem.

Style 9335 is classifiable under the provision for gloves of man-made fibers, made from pre-existing fabrics, in item 704.8525, TSUSA. The rate of duty is 15 cents per pound, plus 19.7 percent ad valorem.

The subject glove/mittens all fall within textile category 631-W. As products of Taiwan, this merchandise is subject to quota restrctions and visa requirements.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D14

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Mr. A.N. Deringer
A.N. Deringer, Inc.
Rd. #1 - Box W 432
Alexandria Bay, New York 13607-9798

Dear Mr. Deringer:

In your letter dated December 12, 1985, you inquired on behalf of Insul/Crete Co., Inc. of Kingston, Ontario, Canada about the dutiable status of an Insul/Crete Exterior Insulation System from Canada.

You submitted descriptive literature and samples of some of the products which comprise the System.

The modifier for cement has been analyzed by our laboratory as an aqueous suspension of polybutyl acrylate, a non-benzenoid acrylic acid resin. This resin is classifiable under the provision for synthetic plastics material, acrylic and methacrylic acid resins, other, in item 445.0520, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the rate of 7.1 percent ad valorem.

The fiberglass reinforcing mesh is an open, leno woven textile fabric of man-made glass fiber yarns. The mesh is approximately 1/4 inch square, and has been lightly coated with an acrylic plastic substance which helps stabilize the mesh, protects the glass yarns from the alkalinity in the cement, and imparts a noticeable stiffness to the fabric. The fiberglass reinforcing mesh is classifiable under the provision for woven fabrics, of man-made fibers, coated with less than 70 percent by weight of rubber or plastics materials, in item 355.8220, TSUSA, dutiable at the rate of 2 cents a pound, plus 9.6 percent ad valorem.

The chopped fiberglass strands, 1/2 inch long, are added to the base coat material, sand and cement to impart strength to the base coat. The strands are treated for protection against alkalinity. These fiberglass strands are classifiable under the provision for glass in bulk, item 540.7100, TSUSA, dutiable at the rate of 6.8 percent ad valorem.

The zink (zinc) control joints are used in construction of the exterior insulation system employing stucco. The joints are 10 feet in length, are placed in intervals of no more than 20 lineal feet, and are used to prevent cracking in the panel that is normally associated with stucco. The zinc joints are classifiable as articles of zinc, not coated or plated with precious metal, in item 657.8000, TSUSA, dutiable at the rate of 6.2 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E2

The nylon or other plastic screws trade-named Fastacks, as well as individual plastic washers, are classifiable under the provision for articles not specially provided for, of rubber or plastics, other, in item 774.5595, TSUSA. The rate of duty is 5.7 percent ad valorem.

The rigid vinyl trim beads, in lengths of ten feet, and having slots, are classifiable under the provision for articles not specially provided for, of rubber or plastics, other, in item 774.5595, TSUSA, dutiable at the rate of 5.7 percent ad valorem. If this trim does not have slots, it is classifiable under the provision for film, strips....and other profile shapes...of plastics ...other, other, in item 771.5500, TSUSA. The rate of duty for this unslotted trim is 6.3 percent ad valorem.

The articles trade-named Fas'ners are nylon or other plastic expandable anchor shells with threaded nails which are used to permanently secure Styrofoam Rigid Insulation Board to substrates. The nails have slotted heads and have unthreaded, sharply pointed, tapered ends.

The Fas'ners, consisting of the plastic expandable anchor shell and threaded nail, constitute an entirety for tariff purposes when imported together, and are classifiable according to the component material of chief value. Thus, if the Fas'ners are in chief value of iron or steel, they are classifiable under the provision for other articles of iron or steel, not coated or plated with precious metal, in item 657.2590, TSUSA, dutiable at the rate of 6.2 percent ad valorem. If the Fas'ners are in chief value of the plastic, they are classifiable under the provision for articles not specially provided for, of rubber or plastics, other, in item 774.5595, TSUSA, dutiable at the rate of 5.7 percent ad valorem.

Regarding the Flex Float finish material, said to be a synthetic water based acrylic, and the Colour Choice Sealer, stated to be a generic acrylic enamel, your inquiry does not provide sufficient information for us to issue a ruling for these products. Requests for rulings must be submitted in accordance with Part 177, Customs Regulations. Therefore, please submit the chemical name of each product, and the percentage of each substance comprising each product. If samples of each are available, please send them to this office.

With the exception of the Flex Flat finish material and the Colour Choice Sealer, this is a ruling issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Ms. H. Hessam
Goemar International Corporation
2856 Thornridge Drive
Atlanta, Georgia 30340

Dear Ms. Hessam:

In your letter dated December 19, 1985, you inquired about the dutiable status of a seaweed extract from Denmark.

Your letter requests that we review our ruling concerning your seaweed extract type GYFA 15. Specifically you believe that since the mixture containing polypeptides occurs naturally, that the product should not be classified as a mixture.

Headnote 3 of Schedule 4 of the Tariff Schedules of the United States, "The term mixtures as used in this schedule means substances consisting of two or more ingredients, whether occuring as such in nature." Since we have followed the headnote as previously stated we believe the ruling to be correct.

Seaweed extract GYFA 15 is classifiable under the provision for mixtures of two or more organic compounds in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 3.9 percent ad valorem, but not less than the highest rate applicable to any component compound. The highest rate applicable is for polypeptides classifiable in item 435.52, Tariff Schedules of the United States, and dutiable at the rate of 7.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. J.A. Beck
Ringo Manufacturing Ltd.
23-7503 35th Street S.E.
Calgary, Alberta T2C 1V3
Canada

Dear Mr. Beck:

In your letter dated December 4, 1985, which was received in this office on December 26, 1985, you inquired about the dutiable status of audio cassette carrying cases from Canada. These cases were manufactured for Hartzell Manufacturing Inc., The Dynasound Organizer Division, of St. Paul, Minnesota.

Two sample cases, models 724 and VS24, were provided with the request. The attache styled cases are designed to carry audio cassette tapes and are constructed from leather-like padded vinyl over rigid wall panels. Model 724 has a luggage valance frame, two metal snap locks, bottom stud feet, and an interior plastic insert designed to organize 24 boxed tapes. Model VS24 consists of two end panels riveted to a larger one-piece panel which, when folded, creates the top, bottom, and two side panels. One metal snap closure secures the case which is equipped with an interior plastic insert capable of organizing 24 boxed or 51 unboxed cassettes.

The term "luggage", as used in the Tariff Schedules of the United States (TSUS), includes containers or cases which are designed to hold specific items and which are designed to be carried with the person. The subject articles are containers designed to both hold specific items, audio cassette tapes, and to be carried with the person. Accordingly, they are classifiable in the luggage provisions.

The models 724 and VS24 cassette carrying cases are classifiable under the provision for luggage, of other material, in item 706.6245, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 20 percent ad valorem.

7150 Penguin Place
Falls Church, VA 22043

Dear Mr. Harmon:

In your letter of December 30, 1985, you requested the tariff classification of a luffa scrubber from Guatemala.

You have submitted a sample of a luffa scrubber. It is an oval-shaped scrubber approximately 12½ inches long by 5 inches wide, with woven textile loops at each end for grasping. It has the luffa material on one side and a woven textile backing on the other side. The fiber content of the textile backing is not identified.

When in chief value of the luffa, the scrubber would be classifiable under the provision for Articles not specially provided for, of unspun fibrous vegetable material, other, in item 222.6400, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 3 percent ad valorem.

When in chief value of the woven textile material, and such material is cotton, the scrubber would be classifiable under the provision for Articles not specially provided for, of cotton, other in item 386.5300,(TSUSA), and dutiable at the rate of 8.2 percent ad valorem.

When in chief value of the woven textile material, and such material is man-made fibers, the scrubber would be classifiable under the provision for Articles not specially provided for, a man-made fibers, other, in item 389.6270, TSUSA, and dutiable at the rate of 4 cents per pound plus 10 percent ad valorem.

Articles classifiable under item 222.6400, TSUSA, which are the products of Guatemala are entitled to duty free treatment under the Caribbean Basin Economic Recovery Act (CBERA), upon compliance with all applicable regulations.

Mr. E. Ruiz, Jr.
Air Sea Customs Service, Inc.
1955 N.W. 72nd Avenue
Miami, Fla. 33126

Dear Mr. Ruiz:

In your letter of December 18, 1985, you requested this office to rule on the tariff classification of a moon boot, product of Italy, on behalf of Universe Shoe of Florida.

Inspection of the sample submitted with your inquiry, Style KB668395, indicates that this boot, which is approximately 11 inches high, has a 3 color non-molded foam backed plastic shaft double stitched to the top of a 2 color unit molded rubber/plastic bottom. This boot also has a removable foam liner that has a tricot fabric lining on the inside and a transparent plastic coating on the outside. This liner would be treated as an entirety if imported with the boot and is dutiable at the same rate as the boot.

It is noted that the unit molded light gray rubber/plastic bottom has a contrasting dark gray band completely encircling this bottom which is applied at the sole and overlaps the upper. According to trade information, contrasting color bands of this type are always injected in a separate step from the molding of the shell bottom. It is our opinion that this bottom possesses a foxing-like band because the band is separately molded, is at the sole, overlaps the upper, and resembles a foxing.

In view of the foregoing, a moon boot made with the sample bottom is classifiable under the provision for other footwear which is over 50% by weight of rubber or plastics; which has a foxing-like band applied or molded at the sole and overlapping the upper; and which is protective against water, oil, grease, or cold or inclement weather, in item 700.5700, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 37.5 percent ad valorem.

Mr. Terrance W. Connolly
Generichem Corporation
85 Main Street
P.O. Box J
Little Falls, N.J. 07424

Dear Mr. Connolly:

In your letter dated November 21, 1985, you inquired about the dutiable status of Comprima compressible sugar from the Netherlands. You have suggested consideration under the provision for edible preparations, not specially provided for, in item 183.05 of the Tariff Schedules.

The substance that you describe as compressible sugar has two potential formulations. The first variety will have a composition of 97 percent cane or beet sugar and 3 percent maltodextrin or starchdextrine. The other form of this substance will contain 85 percent cane or beet sugar with the balance made up of either maltodextrin or starchdextrine. The uses intended for this product are either as confectionery, after the addition of flavoring, coloring, and other ingredients, or as an ingredient in a pharmaceutical after the addition of an appropriate medicinal. The completed substance will then be compressed into the form of a pill or tablet.

Both forms of Comprima are classifiable under the provision for edible preparations, not specially provided for, in item 183.0520, Tariff Schedules of the United States, and dutiable at the rate of ten percent ad valorem.

Articles classifiable under item 183.0520, TSUS, which contain over 65 percent by dry weight of sugars derived from cane or beet sources, whether or not mixed with other ingredients, capable of being further processed or mixed with similar or other ingredients, and which are not marketed to the retail consumer in the identical form and package in which imported were placed under quota restraints by Presidential Proclamation 5071. Since the current quota quantity as expressed in item 958.15 of the Tariff Schedules is "none" for products of this type, both forms of Comprima are effectively prohibited from entry. A copy of Presidential Proclamation 5071 is enclosed for your information.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Eckstam, Fitzsimmons & Associates, Inc.
14276 23rd Avenue North
Plymouth, MN 55441

Dear Ms. Ambrose:

In your letter dated December 19, 1985, which was received in this office on January 7, 1986, you inquired about the dutiable status of soft bathtub foam blocks from Japan.

Four samples were submitted with your inquiry. Two are triangular shapes measuring approximately 2-3/16 inches by 1-9/16 inches by 1-1/16 inches, and two are rectangular shapes measuring approximately 3-1/8 inches by 1-5/8 inches by 3/4 inch. These lightweight foam plastic blocks float without absorbing water. When wet, they stick together for hours. The blocks are designed for construction play, and are capable of being combined in a variety of structural configurations.

These bathtub blocks are classifiable under the provision for toy building blocks, bricks, and shapes in item 737.5500, Tariff Schedules of the United States, and dutiable at the rate of 6.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

7012 West Gulf Bank
Houston, TX 77040

Dear Sirs:

In your letter dated December 20, 1985, you inquired about the dutiable status of a sisal tote bag from Kenya.

The sample submitted is a tote bag manufactured of woven sisal twine. It is unlined and has double shoulder straps of leather.

The tariff classification of this tote bag is predicated upon the component material in chief value at the point just prior to final assembly in the article. In this instance the final assembly is when the sisal bag body is joined with the leather straps. The two competing materials are the sisal and the leather. Based on examination of the sample, it appears to be in chief value of the sisal material.

When in chief value of sisal, the tote bag is classifiable under the provision for handbags, of textile materials, of vegetable fibers and not of pile and tufted constructed in item 706.3840, Tariff Schedules of the United States, and dutiable at the rate of 6.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Los Angeles, CA 90010-2597

Dear Mr. White:

In your letters dated January 14, 1986 and March 11, 1986, on behalf of Transpacific Food Sales, Inc., you inquired about the dutiable status of frozen, uncooked croissants from New Zealand.

A breakdown by weight of all ingredients accompanied your March 11 letter. The imported articles will be frozen, unbaked croissants, made from a dough composed of flour, water, butter, sugar, yeast, salt, and other ingredients. The butterfat content will be 19 percent by weight. The products will be imported in cardboard cases containing 15 or 25 dozen croissants, depending on their size, and will be sold to distributors who in turn sell to commercial accounts such as hotels, restaurants, and deli and sandwich-type businesses. These accounts will fully cook the croissants when served to their customers.

The unbaked, frozen croissants are classifiable under the provision for edible preparations not specially provided for... containing over 5.5 percent by weight of butterfat and not packaged for retail sale in item 182.9200, Tariff Schedules of the United States Annotated, and dutiable at the rate of 16.5 percent ad valorem. They will not be subject to the quota restrictions in item 950.23, TSUS.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Savant Customs Brokers & Freight Forwarders, Inc.
11 Broadway, Suite 951
New York, NY 10004

Dear Mr. Satz:

In your letter dated January 10, 1986, on behalf of The Tupman Thurlow Co., Inc., you inquired about the dutiable status of processed lamb from New Zealand.

The product you described consists of frozen boneless lamb which will first be trimmed of fat and cut into chunks (cubes of no more than one-half inch size) or flakes. These chunks or flakes will then be compressed into specified sizes or shapes, such as, for instance, into lamb roasts. No seasonings will be added, nor will the product be cooked.

This processed lamb meat, consisting of compressed chunks or flakes, is classifiable under the provision for "other meats and edible meat offal, prepared or preserved" in Part 2B of Schedule 1, Tariff Schedules of the United States Annotated (TSUSA). If valued not over 30 cents per pound, this product is classifiable in item 107.7000, TSUSA, and dutiable at the rate of 0.7 cents per pound. If valued over 30 cents per pound, the processed lamb is classifiable in item 107.7600, TSUSA, and free of duty.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Robert Hornyan
Arizona Customs Brokers
2526 E. University Dr., Suite 465
Phoenix, Arizona 85034

Dear Mr. Hornyan:

In your letter dated January 17, 1986, on behalf of Creative Images, Inc., you inquired about the dutiable status of a battery operated "Flashing Eye Mask" from Hong Kong.

The battery operated (not included) "Flashing Eye Mask" is comprised of a plastic skeleton skull having two red lamps for eyes, electrical wires extending from each eye to a remote plastic case which will house a 9 volt battery and a switch which will make the eyes flash on and off, and a textile hood which is permanently affixed to the sides and top of the skull. The mask may be used at masquerade parties, conventions and other functions which relate to the use of a mask.

The "Flashing Eye Mask" is classifiable under the provision for electrical articles and electrical parts of articles, not specially provided for: Other: Other... in item 688.4280, Tariff Schedules of the United States, and dutiable at the rate of 4.1 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Maurice A. Marchand
A. Lassonde & Fils Inc.
170.5 Teme Avenue
Rougemont, Quebec, Canada JOL 1 MO

Dear Mr. Marchand:

In your letter dated January 14, 1986, you inquired about the dutiable status of fondue kits and fondue dips from Canada.

The fondue kits will be marketed as four distinct varieties; Chinese, Oriental, Chicken and Seafood. These kits are composed of:

1. A 27 ounce can of fondue bouillon which is composed mostly of water, dehydrated vegetables, spices and flavorings. The bouillon is flavored to impart the distinct tastes of the aforementioned varieties of fondues.

2. Three 125 gram size jars of distinct types of fondue sauces. These types are, Bourguignonne, Barbeque, Oriental, Chinese, Mexican, Tarragon and Seafood. These sauces are packed three to a kit and coordinated by flavor to correspond to the particular variety of fondue.

Along with the fondue kits are individually marketed fondue sauces. These sauces will be marketed in 8.8 ounce jars and are the idential varieties to those sauces packaged in the kits.

Instructions for use of the kits indicate that the bouillon portion is to be placed in a fondue pot unchanged, heated sufficiently so as to render it suitable for use as the cooking medium. Cut pieces of meat, poultry, fish or vegetables are to be cooked in the bouillon and then dipped in the appropriate ready to use sauce and eaten.

It should be noted, that although called a bouillon, this product is in no way intended for use or so used as soup. It is a cooking medium for other foods for the purpose of preparing food and imparting a particular flavor to these foods. Both the 125 gram and 8.8 ounce size jars of various fondue sauces are complete products and are so used as a sauce to enhance flavor and are not capable of being eaten by themselves as a foodstuff.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F6

The fondue bouillon is classifiable under the provision for edible preparations in item 183.05, Tariff Schedules of the United States, and dutiable at the rate of 10 percent ad valorem.

The fondue sauces are classifiable under the provision for other sauces in item 182.46, Tariff Schedules of the United States, and dutiable at the rate of 7.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Seymour Rothstein
Allegretti, Newitt, Witcoff, & McAndrews, Ltd.
125 South Wacker Drive
Chicago, IL 60606

Dear Mr. Rothstein:

In your letter dated January 20, 1986, on behalf of Tsuyama Manufacturing Company, Ltd., of Osaka Japan, you inquired about the dutiable status of the Cateye Ergociser, Model EC-1000, from Japan. Descriptive literature was submitted with your request.

Model EC-1000 is a stationary exerciser with the flywheel enclosed within what appears to be a metal housing. In the front and rear of this housing, bars with leveling feet extend on both sides. The square handlebar is on top of an adjustable central post to fit the height of the user. The seat post with ergonomic saddle is likewise adjustable. An eddy current brake control, to be powered by household current (the consumption is rated at 40 watts), applies a predetermined loading on the flywheel within the housing. The pedals, which extend on either side of this unit, have permanently affixed straps.

In the center of the handlebars, a computer is mounted on the handlebar post. As you describe it, this computer performs limited functions. The computer is programmed with a test mode for the user's physical fitness level that yields 5 ratings from excellent to poor. The rating result can be entered into an individual's program either under an "Automatic" or "Manual" exercise mode. This unit can store information for up to 9 users which can be retrieved under the "Automatic" mode (2 AA batteries are used to maintain this data). Additional or non-regular users would be employing the "Manual" mode. Other data to be entered are the user's age, weight, sex, and personal code number. When the optical earlobe sensor is plugged in, this unit also provides readouts on pulse rate, energy consumption, elapsed time, current workload, cadence, and work rate (watts), maximum oxygen uptake, maximum physical work capacity, and fitness level. This data is recorded every 30 seconds and printed out on thermal paper by the unit's integral printer. An automatic safety alarm determined by the entered age sounds when the upper limit pulse rate is reached. This upper limit alarm can also be set manually.

In a photograph of the computer in your brochure, one of the readouts is labeled "calorie." This readout is not explained in either your letter or your brochure. Your letter also mentions a

F8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

pretest mode which is not further explained.

Your brochure advertises the EC-1000 in the following manner:

> While watching TV, or listening to music, you can exercise with please, at ease, effectively, and aerobically.
>
> Since the functions of the heart and lungs may be enhanced without physical overload, it may be shared by all members of a family, from young people to grandparents. (emphasis added).

Accordingly, the EC-1000 does not appear to be chiefly used professionally by medical practitioners.

The Cateye Ergociser, Model EC-1000, is classifiable under the provision for sport, gymnastic, athletic, or playground equipment;... not specially provided for, in item 735.2052, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 5.04 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. B. T. Hardcastle
American Oyster Incorporated
950 Spitzer Building
Toledo, Ohio 43604

Dear Mr. Hardcastle:

In your letter dated January 22, 1986, you inquired about the dutiable status of Pleurotus Ostreatus Mushroom from Mexico.

It is our understanding that this item is a mushroom kit composed of compost (ground corn cob and straw) and mushroom spawn (pleurotus ostreatus mycelium) that is formed into 28 pound blocks. These blocks are used for the propagation of mushrooms.

This product is classifiable under the provision for mushroom spawn in item 126.59, Tariff Schedules of the United States, and dutiable at the rate of 1 cent per pound.

Your inquiry asks what the duty costs would be if all the ingredients were exported from the United States to Mexico, manufactured into these blocks, and shipped back to the United States. Questions regarding American Goods shipped abroad and returned should be addressed to the U.S. Customs Service, Office of Regulations and Rulings, 1301 Constitution Avenue, N.W., Washington, D.C. 20229-0001.

Shipments of these items are subject to the United States Department of Agricultures regulations. Questions regarding these regulations should be addressed to the U.S. Department of Agriculture, A.P H.I.S., Federal Building, Room 838, Hyattsville, Md. 20782.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Charles Marcus
Smart Set Gloves, LTD.
6 East 32nd Street
New York, NY 10016

Dear Mr. Marcus:

Your letter of January 9, 1986 received in this office on January 29, 1986, requested this office to rule upon the tariff classification of gloves from Taiwan. Four samples were submitted with your request.

Style 954/1061 and 955/1070 are ladies seamless dress gloves of acrylic fibers with a vinyl palm and back.

Style 956/1062 is a ladies seamless dress glove of acrylic fibers, with a double cuff design and a vinyl palm and back.

Style 973/1007 is a ladies seamless dress glove of acrylic fibers with a vinyl palm and back. Three rows of embroidered stitching which forms ridges is featured on the vinyl back. For tariff purposes style 973/1007 is considered ornamented.

A component material breakdown for all items submitted, indicates that the vinyl portion is in chief value.

The four samples were analyzed by our Customs Laboratory and reveal the following acrylic weight and vinyl square yards per dozen pairs.

	Textile	Vinyl
Style 954 -	.96 lbs per dozen pairs	.72 sq. yds. per dozen pairs
Style 955 -	1.20 lbs per dozen pairs	.72 sq. yds. per dozen pairs
Style 956 -	1.20 lbs per dozen pairs	.72 sq. yds. per dozen pairs
Style 973 -	1.20 lbs per dozen pairs	.72 sq. yds. per dozen pairs

Based on the laboratory analysis and the cost figures submitted, the gloves are in chief value of the textile portion.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F11

REPLY TO AREA DIRECTOR OF CUSTOMS, NEW YORK SEAPORT, NEW YORK

Styles 954/1061, 955/1070, and 956/1062 are classifiable under the provision for gloves, of man-made fibers, knit, in item 704.8550, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 15 cents per pound plus 19.7 percent ad valorem.

Style 973/1007 is classifiable under the provision for gloves, of man-made fibers, ornamented, in item 704.3240, TSUSA. The rate of duty is 21.7 percent ad valorem.

Gloves of man-made fibers fall within textile category designation 631-O. As products of Taiwan this merchandise is subject to visa requirements based upon international textile trade agreements.

Due to the changeable nature of these agreements you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Brian Solomon
K.C. Burdette Company
45 John Street, Suite 801
New York, NY 10038

Dear Mr. Solomon:

In your letter of January 27, 1986, you requested this office to rule on the tariff-classification of a beach sandal, product of Taiwan, on behalf of your client, Mirtex Trading Corporation.

Examination of the sample submitted with your inquiry, Stock No. CS-3531, indicates that this is a Y-type thong sandal with an upper made of folded polypropylene strips and a 2-color EVA wedge type bottom. When a cutting of one of the polypropylene strips making up the upper was unfolded and uncrimped, it was found that this strip was of non-fibrillated construction and was over 1 inch in width so that, for Customs purposes, it is considered a plastic surface.

Therefore, this sample, Stock No. CS-3531, is classifiable under the provision for footwear which is over 50% by weight of rubber or plastics; having uppers of which over 90% of the exterior surface area is rubber or plastics; and which does not have a foxing or foxing-like band applied or molded at the sole and overlapping the upper, in item 700.5670, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Tallman, NY 10982

Dear Mr. Frankenthal:

In your letter dated January 9, 1986, you inquired about the dutiable status of a "High Protein Modified Dairy Blend" from Israel.

The importer advised that "High Protein Modified Dairy Blend" is a mixture of 75 percent casein and 5 percent ultra filtrated whey protein, (albumin). It is assumed that the casein is in chief value.

"High Protein Modified Dairy Blend" in chief value of casein is classifiable under the provision for casein and mixtures in chief value thereof in item 493.17, Tariff Schedules of the United States, (TSUS), and dutiable at the rate of 0.2 cent per pound.

Articles classifiable under item 493.17,(TSUS), which are the products of Israel are entitled to duty free treatment under the Generalized System of Preferences (GSP) or the U.S. - Israel Free Trade Area Implementation Act of 1985 (US/Israel FTA) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Cookstown, Co. Tyrone, No. Ireland
Northern Ireland

Dear Mr. Eliades:

Your letter of January 11, 1986 concerns the dutiable status of Feta cheese made from cow's milk and Feta cheese made from a blend of cow's milk and sheep's milk from Northern Ireland.

Feta cheese made from cow's milk and Feta cheese made from a blend of cow's milk and sheep's milk both are classifiable under the provision for "other cheeses, and substitutes for cheese" in Part 4C of Schedule 1, Tariff Schedules of the United States Annotated (TSUSA). If valued not over 25 cents per pound, these cheeses are classifiable in item 117.7555, TSUSA, and dutiable at the rate of 5 cents per pound. If valued over 25 cents per pound, these cheeses are classifiable in item 117.8855, TSUSA, and dutiable at the rate of 10 percent ad valorem.

Cheese which is classifiable in items 117.7555 or 117.8855 is subject to quota quantity restrictions listed in item 950.10D in Part 3 of the Appendix to the Tariff Schedules. Additionally, an import license, issued to the importer by the United States Department of Agriculture, would be required at the time of entry of such merchandise into the United States.

Inquiries regarding licensing requirements and other U.S.D.A. regulations or restrictions may be addressed to the following office:

Head, Dairy and Import Group
Dairy, Livestock and Poultry Division
Foreign Agricultural Service
U.S. Department of Agriculture
Washington, D.C. 20250

Mr. Michael R. Spano
Candies/El Greco, Inc.
2 Harbor Park Drive
Port Washington, N.Y. 11050-4678

Dear Mr. Spano:

In your letter of December 27, 1985, you requested this office to rule on the tariff classification of a woman's boot from Korea.

Inspection of the sample submitted with your inquiry, Style No. EG1801, indicates that this is a woman's all plastic boot, approximately 5-1/4 inches high, with a zipper closure at the front, a white vinyl mudguard and heel counter, and a unit molded rubber/plastic shell sole which is cemented to the upper.

We note that the shell sole presently overlaps the upper by more than 1/4 inch and that you propose to modify this bottom so that the overlap will be less than 1/4 inch. However, the quilted upper on this boot extends all the way down and turns under at the top of the outsole. The upper, in turn, is also overlapped by the stitched on mudguard which extends from the top of the outsole on to the upper and since this mudguard substantially encircles the entire boot, we would consider it a foxing-like band.

This boot would not be considered waterproof because of the stitched upper and it would not qualify as a cold weather boot since the foam insulation is not thick enough for it to be eligible for classification as protective footwear in item 700.5700, Tariff Schedules of the United States Annotated (TSUSA).

Therefore, Style EG1801 is classifiable under the provision for footwear which is over 50% by weight of rubber or plastic; which has a foxing-like band, almost wholly of rubber or plastic, applied or molded at the sole and overlapping the upper; which is not protective against water, oil, or cold or inclement weather; and which you indicate is valued for Customs purposes over $6.50 but not over $12.00 per pair, in item 700.6900, TSUSA, and dutiable at the rate of 20 percent ad valorem, plus 90 cents per pair.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

63

MAR 20 1986

The sample swatches of "Nappa P.U." and "PVC Nylon" would both be considered a plastic surface. However, classification of a boot using either of these materials would depend on the actual construction of the boot.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Mark S. Zolno
Burdett, Bowles & Radzius, Ltd.
333 West Wacker Drive
Suite 1900
Chicago, IL 60606-1218

Dear Mr. Zolno:

In your letter of February 4, 1986, on behalf of your client, Perseco, Inc., you requested the tariff classification of plastic toy animal figures produced in China.

Samples submitted with your inquiry consist of hard plastic multicolored figures molded into shapes depicting various toy animate and inanimate objects ranging in height from two to three inches. They include figures of a boy and girl named "Fern" and "Link," dinosaurs labelled "Wink," "Bones," "Dina" and "Tiny," a horse named "Kobby" and a monster named "Spell." These figures constitute a line identified as "Tinasours."

A second line of merchandise is called "Runaway Robots" which consists of robot creatures mounted on track-like devices. The articles, which include depictions of a lizard, skull, snake, baboon, bird and Kung Fu man, are propelled by wheels operated by a wound coil spring located inside the track-like base.

It is the opinion of this office that the boy and girl figures are classifiable in item 737.24, Tariff Schedules of the United States (TSUS), under the provision for other dolls and dutiable at the rate of 12.7 percent ad valorem.

The dinosaur figures are classifiable under the provision for other toy figures of animate objects, not stuffed and not having a spring mechanism, in item 737.40, TSUS, dutiable at the rate of 8.3 percent ad valorem.

Merchandise classifiable in tariff items 737.24 and 747.40, TSUS, if valued not over 5 cents per unit, is also eligible for treatment within the purview of tariff item 912.30, TSUS, which provides for the temporary suspension of duty for articles entered on or before December 31, 1986.

The alien figure called "Spell" is classifiable under the provision for other toy figures of inanimate objects, not having a spring mechanism in item 737.49, TSUS, dutiable at the rate of 8.3

G6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

percent ad valorem.

The remaining sample, "Baboon," along with the other figures comprising the "Runaway Robot" series, is classifiable under the provision for toys, not specially provided for, having a spring mechanism in item 737.80, TSUS, dutiable at the rate of 10.5 percent ad valorem.

It is to be noted that while several of the samples carry the registered trademark of the McDonald's Corporation, the importer, Perseco, is an authorized importer and distributor of merchandise bearing that mark.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Mesa, AZ 85202

Dear Ms. Johnson:

In your letter dated February 3, 1986, you inquired about the dutiable status of "Safe-T-Etch" from Canada.

"Safe-T-Etch", a clear liquid, is an aqueous mixture of hydrofluoric acid, a benzenoid non-ionic surfactant and water. The label indicates that the product is used to etch tub and porcelain shower floors to make them slip resistant.

"Safe-T-Etch" is classifiable under the provision for benzenoid mixtures in item 413.5100, Tariff Schedules of the United States Annotated, and dutiable at the rate of 11.9 percent ad valorem, but not less than the highest rate applicable to any component material. No component has a rate higher than 11.9 percent.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

This merchandise may be subject to the regulations of the Environmental Protection Agency, Office of Pesticides and Toxic Substances. You may contact them at 401 M Street, S.W., Washington, D.C. 20460, telephone number (800) 424-9085.

Mr. C. F. McFeeters Jr.
A.N. Deringer, Inc.
Suite 1504
40 Rector Street
New York, N.Y. 10006

Dear Mr. McFeeters:

In your letter dated February 12, 1986, on behalf of Refined Sugars, Inc., you inquired about the dutiable status of Talin protein produced in the United Kingdom.

The literature submitted with your ruling request indicates that this product is a natural sweetener derived from plant matter. Your letter indicates that plant material from Africa is shipped to the United Kingdom where the Talin protein is produced from this material. You also state that the Talin may be imported in pure form, gum arabic blends, maltodextrin blends and mannitol.

Pure Talin is classifiable under the provision for flavoring extracts, and fruit flavors, essences, esters, and oils, all the foregoing whether or not containing ethyl alcohol: not containing alcohol: other in item 450.2040, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 6.5 percent ad valorem..

Talin in maltodextrin blends and in mannitol is classifiable under the provision for edible preparations not specially provided for: other: other: other in item 183.0520, TSUSA, and is dutiable at the rate of 10 percent ad valorem.

However, your inquiry does not provide sufficient information to enable us to issue a tariff classification ruling on Talin in gum arabic blends. Your request for a ruling should include a description of the manufacturing process by which the gum is produced. Please indicate whether the gum has been manufactured to specifications for a particular use, and if so, please state what further processing will be performed after importation to achieve this result.

Based upon the information you submitted, Talin in gum arabic blends would probably be classifiable under the provision for edible preparations not specially provided for: other: other: other: other in item 183.0520, TSUSA with duty at the rate of 10 percent ad valorem.

G9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

There are no quotas which are applicable to this merchandise at the present time.

Since the African raw plant material is processed into Talin protein in the United Kingdom (thereby being transformed into a new product), it is our opinion that the country of origin of the Talin products is the United Kingdom.

Regarding the tariff classification of pure Talin protein, Talin in maltodextrin blends and Talin in mannitol, this is a ruling letter issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Regarding the tariff classification of Talin in gum arabic blends and regarding the issue of country of origin, this in an information letter issued under the provisions of Section 177.1(d)(2)[19 C.F.R. 177.1(d)(2)] of the Customs Regulations.

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Products of this type may be subject to the regulations of the Food and Drug Administration (FDA). Questions regarding FDA requirements may be addressed to the Food and Drug Administration, 5600 Fishers Lane, Rockville, Maryland 20857, telephone: (301) 443-1594.

If you require further assistance regarding the requirements of Part 177, Customs Regulations, please contact Mr. Jacob Bunin, National Import Specialist Assistant, telephone number (212) 466-5742, or Mr. Stanley Hopard, National Import Specialist, (212) 466-5760.

Sincerely,

John J. Martuge

Mr. Eric Jones
Vice-President
Porter International, Inc.
5758 West Century Blvd.
Room 360
Los Angeles, CA 90045

Dear Mr. Jones:

In your letter of January 20, 1986, you requested the tariff classification of pattern fabric material produced in Korea.

The sample submitted with your letter consists of a number of textile piece goods with printed patterns or lines of demarcation that outline toy animal shapes. After importation, these pattern fabric pieces will be repacked in a retail container together with stuffing material. When the patterns are cut, stuffed and sewn they form a toy stuffed animal.

General Interpretative Headnote 10(h) of the Tariff Schedules of the United States (TSUS) provides that "unless the context requires otherwise, a tariff description for an article covers such article, whether assembled or not assembled, and whether finished or not finished."

In their imported condition, the fabric pieces are so far advanced that they can be considered unfinished and unassembled components of a toy animal skin.

Accordingly, it is our position that this merchandise is classifiable under the provision for skins for toy figures of animate or inanimate objects in item 737.51, TSUS, and dutiable at the rate of 8.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director
New York Seaport

Mr. F. Prackler
Harold I. Pepper Co., Inc.
9 Murray Street
New York, NY 10007

Dear Mr. Prackler:

In your letter dated February 20, 1986, on behalf of your client Perny Inc., you inquired about the dutiable status of various hydrolysates of protein from New Zealand.

According to the telephone conversations with Mr. Peterson of Perny Inc., the products will all be used as nutrient sources for growing bacteria.

All of the products mentioned in Mr. Petersons letter are classifiable under the provision for mixtures, not specifically provided for in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 3.9 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be the nitrogenous chemical components, classifiable under item 425.52, Tariff Schedules of the United States, and dutiable at the rate of 7.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director
New York Seaport

Mr. William J. Maloney
Rode & Qualey
295 Madison Avenue
New York, NY 10017

Dear Mr. Maloney:

In your letter of February 21, 1986, you requested, on behalf of your client, L.J.N. Toys, Ltd., the dutiable status of toy fantasy creatures marketed under the tradename "Blinkins." The country of origin is Hong Kong.

The Blinkins are designed to be conceptual characterizations of insect-like fantasy creatures which live primarily in the woods and associate with insects and wild life.

The character figures will be imported in two sizes: a stuffed version of approximately 14 inches in height and a smaller version of four inches in height. Each version shares certain common features including a plastic molded head; human-like facial features; torso and poseable arms and legs; translucent plastic wings; two antennae which protrude from the head; and an exaggerated, protruding bottom which lights when a switch contained within the figure is engaged.

The larger sized Blinkin has certain features which distinguish it from the smaller version. The antennae light up in unison with the bottom. The torso and appendages consist of a skin of textile material filled with traditional stuffing material. The smaller Blinkin figure is made of molded plastic.

Headnote 3 to Subpart E, Part 5, Schedule 7, Tariff Schedules of the United States (TSUS), in pertinent part, defines toy figures of inanimate objects as those which "possess features which are a hybrid of features of more than one animate object." The term hybrid, taken in the context of this headnote language, has come to include those toy figures which are a composition of significant features characteristic of different beings.

The overall appearance of the Blinkins projects a figure with head, limbs and partial torso suggesting a human combined with the antennae, wings and light producing abdominal organ of a firefly beetle insect. Notwithstanding the fantasized, highly stylized winged insect components, they are characteristic of a firefly and taken in their entirety are integral anatomical elements of the Blinkins. Thus, the figures constitute a composite of parts of different species

613

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

and in our opinion, qualify as a hybridization as that term is defined in Headnote 3.

Accordingly, the larger 14 inch Blinkin is classifiable under the provision for toy figures of inanimate objects, not having a spring mechanism, stuffed or filled, in item 737.47, TSUS, dutiable at the rate of 8.3 percent ad valorem. The four inch plastic Blinkin is classifiable under the provision for other toy figures of inanimate objects, not having a spring mechanism, in item 737.49, TSUS, dutiable at the rate of 8.3 percent ad valorem.

Articles classifiable under item 737.47, TSUS, which are the products of Hong Kong are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

For John J. Martuge
Area Director

[redacted]

Dear [redacted]

In your letters of December 9, 1974, and January 10, 1975, on behalf of [redacted], you asked for information about the tariff status of both the MBX electron microanalyzer and the IMS-300 ion microanalyzer, products of France.

Both instruments are used by universities, manufacturers, and anti-pollution institutions, among others, and are used to determine the elements contained in samples of various materials being analyzed. As stated in the brochure submitted, the MBX electron microanalysis system functions by the wavelength and energy dispersive analysis of the X-ray spectrum provided by the bombardment of the specimen with a beam of energetic electrons. In operation, electrons are generated and focused by an electron gun on the specimen to be analyzed. The electrons diffuse into and pass energy to the sample from which X-rays are radiated. These emitted X-rays are intercepted and diffracted into a detector.

The IMS-300 ion analyzer may also be used in the fields of geology, metallurgy, physical chemistry, and biology, in addition to the above. This instrument combines the features of a mass spectrometer and an ion emission microscope to provide a map of the chemical distribution of the surface of a specimen. Ion images are created for display on fluorescent screens.

You stated that both instruments use a small beam (the MBX uses an electron beam, while the IMS-300 uses an ion beam) to bombard the solid sample at low power, analyze a second beam by scanning (crystal scanning in the MBX and magnetic scanning in the IMS-300), and detect signals in the form of pulses.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

A3

[redacted]

For the reason that the operating principle of the MBX electron microanalyzer depends upon X-rays employed to identify the composition of the analyzed specimen, the MBX analyzer is classifiable under the provision for apparatus based on the use of X-rays, in item 709.63, Tariff Schedules of the United States (TSUS), with duty at the rate of 2.5 percent ad valorem.

On the other hand, as stated in your letter, the operating principle of the IMS-300 ion microanalyzer does not employ X-rays but depends upon ion images obtained instantaneously and is similar in its microanalytic function to that of an electron scanning microscope. In these circumstances, the ion microanalyzer is classifiable under the provision for electron, proton, and similar microscopes and diffraction apparatus, in item 708.78, TSUS, dutiable at the rate of 11 percent ad valorem.

Sincerely yours,

for Salvatore E. Caramagno
Director
Classification and Value Division

[redacted]

Dear [redacted]

In your letter of September 22, 1977, on behalf of [redacted] you requested a ruling on the tariff classification of certain ballasts to be imported from Mexico.

On September 16, 1977, we expressed our opinion that, based upon the circumstances and operations which you described, the American components of the imported ballasts qualify for tariff treatment under the provisions of item 807.00, Tariff Schedules of the United States (TSUS), upon compliance with the Customs Regulations.

Photographs and samples of the different American components and a finished ballast, along with a detailed description of the operations performed in Mexico, as well as the definition, functions, and application of a ballast supplied by your client were submitted with your letter of August 24, 1977.

In that letter you stated that the definitions, functions, and application of a ballast supplied by your client are as follows:

"(a) A Ballast is an Electromagnetic device which limits the current applied to a high intensity discharge lamp to its specified value while supplying sufficient voltage to strike the arc.

(b) The function of a ballast is to limit the current applied to a high intensity discharge lamp to its specified value while supplying sufficient voltage to strike the arc.

REPLY TO: COMMISSIONER OF CUSTOMS, WASHINGTON, D.C. 20229

AS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

[redacted]

(c) The ultimate application of this ballast is as a component of a High Intensity Discharge Lighting Fixture, both indoor and outdoor. High Intensity Discharge Lamps include: Mercury, Metalic Halde, and High Pressure Sodium."

You suggest that the ballast is properly classifiable as an electrical article, not specially provided for, under the provisions of item 688.40, TSUS.

It is noted that the submitted sample is designated as an auto-transformer, and according to the wiring diagram shown thereon it functions as a transformer. Accordingly, it is our opinion that the article in question is classifiable under the provision for transformers rated at less than 1 kva, in item 682.05, TSUS, dutiable at the rate of 12.5 percent ad valorem.

Sincerely yours,

R. Arnold

[redacted]

Dear [redacted]

Your inquiry of November 7, 1977, requested the tariff classification of dental screw posts manufactured in Sweden.

A screw post is designed to be placed in the tooth and serves to help in retention of material used in the buildup necessary before the crown is put on a tooth. The post is made of a leadfree alloy and is electrolytically plated with gold. It is assumed the base material is steel.

You are of the opinion that the screw posts should be classifiable as dental instruments and parts thereof, under item 709.25, Tariff Schedules of the United States (TSUS), dutiable at the rate of 7 percent ad valorem. Customs in Los Angeles plans to classify these screw posts as screws of base metal, having shanks over 0.24 inch in diameter under item 646.75, TSUS, dutiable at the rate of 11.5 percent ad valorem.

Screw posts are dental supplies, not dental instruments. Inasmuch as they are left in the repaired tooth, they cannot be used beyond their initial application. Dental instruments, on the other hand, are specialized hand tools designed for reuse and chiefly used by dentists in the performance of their profession. Thus, item 709.25, TSUS, would be inapplicable.

The Assembly Engineering Master Catalog 1976/77 defines a screw as an externally threaded fastener capable of mating with a preformed internal thread or of forming its own thread while being tightened or released by torquing the screw head. The main function of the screw is that of fastening. The subject screw post is not a fastening device. Rather, it is a retainer used in certain dental procedures. A screw post is placed, not screwed, into a tooth. The provision for screws under item 646.75, TSUS, also is inapplicable.

The screws are considered to be articles of metal. They would be classifiable according to component material of chief value. If in chief value gold, they would be classifiable as articles of precious metal, of gold, under item 656.10, TSUS, dutiable at the rate of 20 percent ad valorem. If in chief value steel, they would be classifiable as articles of base metal, coated or plated with precious metal: Coated or plated with gold, under item 656.25, TSUS, dutiable at the rate of 25 percent ad valorem.

Sincerely yours,

[redacted]

Dear [redacted]

Your inquiry of October 18, 1977, requested the tariff classification of cables used in the automotive industry. We replied to that letter on December 12, 1977, stating that while we could not issue a definite tariff ruling, we believed the cables might possibly be classifiable as parts of motor vehicles, other, under item 692.27, Tariff Schedules of the United States (TSUS), dutiable at the rate of 4 percent ad valorem.

Please be advised that we have reconsidered the above advice and would state that our original advice to you was in error. Under General Interpretive Headnote 10(ij), TSUS, a provision for "parts" of an article covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such part. It is our reconsidered view that most of the cables that you would export would be more specifically classified as cables, of wire, whether or not cut to length, fitted with fittings or made up into articles, under item 642.20, TSUS, dutiable at the rate of 9.5 percent ad valorem.

056114

Sincerely yours,

Salvatore E. Caramagno

[redacted]

Dear [redacted]

In your letter dated July 26, 1978, you inquired about the tariff status of a TV set replacement antennas, which are products of Japan. A sample was submitted.

The merchandise consists of a television antenna with two wrenches included in the package. You indicate that the wrenches are used to unscrew the antenna from the base, when it is broken, bent, or otherwise defective. One tool is placed on the base of the assembly and the other is placed on the base of the antenna.

Under General Headnote 10(ij), Tariff Schedules of the United States (TSUS), a provision for "parts" covers a product solely or chiefly used as a part of an article, but does not prevail over a specific provision for such part.

Thus, the antenna is classifiable under the provision for parts of television apparatus, in item 685.20, TSUS, and dutiable at the rate of 5 percent ad valorem. Inasmuch as wrenches are specifically provided for in item 648.97, TSUS, they are dutiable at the rate of 11 percent ad valorem.

058462

Sincerely yours,

[redacted]

Dear [redacted]

In your letter of October 4, 1978, you request a ruling regarding the tariff classification of certain wood mirrors which you import from Taiwan.

The mirrors, which are under one square foot in reflecting area, have wood shelves or pegs affixed to the wood frames. For tariff purposes, they should be considered as single entities with the mirrors as predominant features.

They are properly classifiable as mirrors under item 544.51, Tariff Schedules of the United States, dutiable at the rate of 17-1/2 percent ad valorem. Inasmuch as they are being imported from the Republic of China, they are eligible for duty-free entry under the Generalized System of Preferences upon compliance with the applicable regulations.

Sincerely,

[redacted]

[redacted]

Dear [redacted]

In your letter of April 11, 1979, you inquire as to the tariff status of aluminum castings and steel forgings, products of West Germany. These articles are for a manual rivet puller which is manufactured in the United States.

The aluminum casting is that of a housing for the rivet puller. The steel forgings are those of a draw bar and joints for the rivet puller. In their condition as imported, they will be in a raw state, totally unmachined, and required milling, grinding, boring and tapping. You state that these articles become parts of a manual rivet puller.

Under the provisions of Headnote 1(iv), Part 2, Schedule 6, Tariff Schedules of the United States (TSUS), Part 2 does not cover parts of articles. The exact point in the processing of a raw material at which it becomes a partly finished article or manufacture is a matter which must be determined on the basis of the circumstances of the particular case involved. Generally speaking this exact point is when the material has been so far processed as to be dedicated to use in the manufacture of an article or part thereof.

While your presentation is not clear on this point because the drawings you submitted are of the finished article, it can be said that if the aluminum casting and steel forgings in their condition as imported are dedicated to use in the manufacture of rivet pullers, they would be classifiable even though unfinished under the provision for

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A12

metal parts of hand tools not specially provided for, in items 651.53 and 651.47, TSUS. The provisions of item 651.53, TSUS, provides for those parts composed of aluminum with duty at the rate of 1.7 cents per pound plus 8.5 percent ad valorem, and the provisions of item 651.47, TSUS, provides for those parts of the rivet puller which would be composed of steel with duty at the rate of 8.5 percent ad valorem.

Sincerely,

Arthur P. Schaffner

Dear

This is in reference to your letter of May 24, 1979, regarding the tariff classification of front-end loaders.

The article which is described as the "Boss Loader", is designed to fit farm tractors in the 100 horsepower range. You state that this loader is engineered to stand up to the 180 horsepower range of tractors and is sturdy enough to be used on 2-or 4-wheel drive units. The front-end loader consists mainly of a main frame, which functions as the lifting arms of the loader, a subframe or mounting brackets which provides support to the main frame, two double acting bucket cylinders and two double acting lift cylinders, and a wire braid hydraulic hose kit. It appears that you also furnish a 60-inch bucket as standard equipment for the front-end loader.

If the front-end loader and bucket are chiefly used in agricultural pursuits, they would be classifiable under the provision for agricultural implements, not specially provided for, in item 666.00, Tariff Schedules of the United States (TSUS), and entitled to duty-free entry. However, if these articles are not chiefly used in agricultural pursuits, they would be classified as lifting and handling machinery, in item 664.05 TSUS, and dutiable at the rate of 5 percent ad valorem.

Sincerely,

(Signed Arthur P. Schifflin

AUG 0 5 1980

[redacted]

Dear [redacted]

In your correspondence dated June 10, 1980, you inquired about the tariff status of certain antenna rotators, which are the products of Japan. Descriptive literature was submitted under cover of your letter.

The submitted material indicates that the antenna rotators include 4 models, the KR-400, KR-500, KR-600, and KR-2000. The latter 3 have "control units" which control the antenna's rotation, supply power to the rotator motor, and indicate through the utilization of a meter. The rotation range of the articles is up to 370 degrees. You indicate that the devices are designed to be used on radios although they are of the type which is suitable for use with television antennas.

We are of the opinion that merchandise of this class or kind is chiefly used in conjunction with television reception and is, therefore, properly classifiable under the provision for television apparatus, in item 685.19, Tariff Schedules of the United States, and dutiable at the rate of 4.8 percent of valorem.

Enclosed for your general information is our pamphlet, "U.S. Import Requirements."

Sincerely,

(Signed) R. X. ARNOLD

28 AUG 1981

[redacted]

Dear [redacted]

This is in further response to your letter of June 22, 1981, in which you requested information on the dutiable status of derailleur shift cables imported from Taiwan.

In Oxford International Corp., v. United States, 68 Cust. Ct. 12, C.D. 4326 (1972), bicycle control cables with fittings were held classifable under the provision for cables fitted with fittings in item 642.20, Tariff Schedules of the United States (TSUS). The current column 1 rate of duty required under this provision is 8.6 percent ad valorem. Also, merchandise from Taiwan classifiable under this provision may be entitled to exemption from duty under the Generalized System of Preferences.

If the shift cables in question have been imported, the above cited legal precedent should be called to the attention of the Customs officers handling the transaction. If duty on the merchandise has already been liquidated, a protest should be filed on Customs Form 19 at the port of entry.

Sincerely,

(Signed) A. P. [redacted]

Chief, Customs Information Exchange

Director, Classification and Value Division

Difference of Opinion on Customs Form 6431

In your memorandum of November 16, 1981, you transferred the difference of opinon on Customs Form 6431 dated September 10, 1980, concerning the tariff classification of steel forgings made in Japan. This difference is listed as the fourth difference on page 2 of CIE N-89/79, Suppl. 27, dated February 1982. Our decision follows:

ISSUE:

The question involved is whether forgings which have not been advanced in any way, but which have been made to specifications for their ultimate production into parts of articles, are classifiable under the provision for forgings in item 606.71, Tariff Schedules of the United States (TSUS), or under the specific provision for the part which they will become, which, in this instance, is the provision for parts of automobiles in item 692.32, TSUS. The 1980 column 1 rate of duty under item 606.71 was 6 percent ad valorem. The 1980 column 1 rate of duty under item 692.32 was 3.9 percent ad valorem. In some instances, however, the classification of forgings under item 606.71 or another forgings provision would accord merchandise a more favorable dutiable status than would result from classifcation of the merchandise as a part.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B4

FACTS:

The specific merchandise involved in this difference is forgings which will be used in the production of universal joints for motor vehicles.

LAW AND ANALYSIS:

In resolving the issue as set forth above, the interpretation of Headnote 1(iv), Part 2, Schedule 6, TSUS, and General Headnote 10(h), TSUS, is involved. General Headnote 10(h) states, "Unless the context requires otherwise, a tariff description for an article covers such article * * * whether finished or not finished." Headnote 1(iv) excludes from Part 2, Schedule 6, articles specially provided for elsewhere in the TSUS, and parts of articles. In United States v. J. Gerber & Co., 58 CCPA 110, C.A.D. 1013 (1971), the court concluded that General Headnote 10(h) could not be used to exclude forgings from the applicable provision for forgings because the language of the forgings provisions constituted a situation where "the context requires otherwise," thereby rendering General Headnote 10(h) inapplicable with respect to forgings which represent unfinished parts. This decision has not been limited by the Customs Service, and under current instructions must, therefore, be regarded as having been acquiesced in. Accordingly, the preference of item 606.71 over a parts provision should not be open to question at this time.

A question does exist, however, because of certain dissatisfactions with the Gerber decision expressed in CSD 81-1, file No. 065046, and in our decision of November 16, 1979, file No. 062184, in which we reconsidered and affirmed a decision dated September 20, 1979. That question is to what

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

069532

extent, if at all, the Gerber decision may be used as a precedent in determining the tariff classification of forgings. We placed the authority of the Gerber decision in doubt for several reasons. First, it was suggested that the Gerber court's views were not consistent with positions taken by that same court in other cases. As examples, we cited United States v. The Servco Co., 60 CCPA 137, C.A.D. 1098 (1973), and Avins Industrial Products Co. v. United States, 62 CCPA 83, C.A.D. 1150 (1975). However, these decisions dealt with different tariff provisions with different legislative histories. The Servco decision in one respect merely stands for the proposition that tubing which is neither used to construct longer lengths of tubing nor as material from which shorter lengths are cut may be regarded as a part, while the Avins decision illustrates a situation where wire used as a material from which shorter lengths will be cut will not be regarded as a part. See our decision in IA 251/79, February 14, 1980, file No. 061845.

More to the point, we cited Redden & Martin v. United States, 5 Ct. Cust. Appls. 485, T.D. 35147 (1915), as a case in which a parts provision prevailed over the applicable forgings provision. In that case, however, the competition was between the forgings provision and a provision for scissors * * * blades * * * finished or unfinished." In that situation, there was at that time a clearer expression of legislative preference for the scissors blades provision over the forgings provision than there is under the present language of the TSUS for any preference of the provision for automobile parts over the applicable provision for forgings. Accordingly, it cannot be categorically asserted that the Gerber decision is not in harmony with earlier and later court decisions.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC_____

069532

B6

We also criticized the Gerber decision for ignoring Headnote 1(iv), Part 2, Schedule 6. However, that headnote has no application with regard to competitions between provisions within Part 2, Schedule 6, and was appropriately not mentioned by the court. With respect to competitions where Headnote 1(iv) might otherwise be pertinent, the finding that General Headnote 10(h) is inapplicable in competitions involving a forgings provision automatically renders Headnote 1(iv) also inapplicable.

In this connection, we stated that the Gerber court was not applying the rules regarding relative specificity in further contravention of the mandate in General Headnote 10(c), TSUS. However, it is fundamental that relative specificity only applies when both competing provisions describe the merchandise. If, as according to the Gerber court, a parts provision does not include unfinished articles when in competition with the applicable forgings provision, the parts provision does not describe the merchandise in its condition as imported, and relative specificity and General Headnote 10(c) have no application in determining the scope of the forgings provision.

Finally, we raised questions as to the applicability of the Gerber decision by suggesting there was a point which could exist either when a forging was made, or at some stage during its further processing, when it ceased being a forging and became dedicated as a part. Then, according to our previously expressed views, the provisions for forgings would not become nullities if you identified that point, provided that point occurred before significant further processing took place. However, the Gerber court, in effect, found that the language of the applicable forgings provision was designed to modify the decision in Saltonstall v. Wiebusch,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

156 U.S. 601 (1895), and to avoid having the Customs Service become involved in questions as to when a forging ceases being a forging and becomes dedicated to use as a part. The necessary inference from the Gerber decision is that whether an article is classifiable as a forging or not as a forging is determined solely by whether any significant further processing after the forging operation has occurred before importation.

HOLDING:

For the foregoing reasons, the rationale contained in CSD 81-1, and in our earlier discussions on the subject, can no longer be regarded as representing the latest views of the Customs Service, and the Gerber decision should be regarded as acquiesced in and as a valid precedent to the extent it may be applicable to the tariff classification of forgings. However, in classifications involving forgings provisions there nevertheless remains the questions as to what constitutes a forging process and whether the imported merchandise has, in fact, not been advanced beyond a forging operation. Since in CSD 81-1 it was not clear that the process involved either a hammering or pressing operation within the traditional concept of a forging operation, that decision, although its discussion of legal precedents will no longer be regarded as representing our current views, is not shown to be erroneous in its conclusion and, therefore, is not revoked. With regard to any other previous decisions regarding forgings, no revocations or reclassifications will otherwise be authorized solely on the basis of the views expressed in the instant decision without independent consideration based on an examination of the merchandise in each individual case as to whether the manufacturing

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

069522

B8

069532

operation involved is, in fact, a forging operation in the traditional sense, and whether the merchandise, in fact, does not represent any significant advancements beyond the forging process.

Products of a forging process which have not been significantly advanced before importation will be classified under item 606.71, or other applicable forgings provision, even though the products also represent, in their condition as imported, unfinished versions of articles, or parts of an articles, specially provided for elsewhere in the TSUS.

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 38012001130

The above-captioned protest and application for further review were filed against your tariff classification of merchandise which was the subject of entry No. 82662650 filed in April 1982, and manufactured in Canada. Our decision follows:

ISSUE:

The merchandise was classified under the provision for tubes in item 772.60, Tariff Schedules of the United States (TSUS), and dutiable at the column 1 1982 rate of 4.5 percent ad valorem. The protestant contends the merchandise is duty free under the provision for tubes designed for tires designed for agricultural or horticultural tractors or other foreign vehicles in item 772.59, TSUS.

FACTS:

The merchandise is Goodrich tubes in size 20.8R 38, with valve type TR-218. Advertising literature for the B. F. Goodrich Company, and for other tire manufacturers, which has been submitted shows that tubes of this description are for farm vehicles.

LAW AND ANALYSIS:

Generally, tires and tubes within the tire industry farm vehicle use category are not interchangeable with tires and tubes in other industry categories such as those for use on cars and trucks, industrial vehicles, etc. See our decision of April 7, 1982, 089009, for a discussion of the pertinency of multiple uses with the respect to the designed-for classification standard.

B10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

However, while it is suggested that the instant articles do not meet the applicable designed-for standard, the file lacks any specific evidence rebutting the submitted evidence which is consistent with a design for exclusive use on agricultural vehicles.

HOLDING:

For the foregoing reasons, you are instructed to allow the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

(Signed) A. P. SCHIFFLAN

Mr. Donald E. Stingel
14701 Spring Meadow Drive
Germantown, Maryland 20874

Dear Mr. Stingel:

In your letter of March 15, 1984, on behalf of your client, AMCA International, Bowling Green, Kentucky, you requested review of a ruling on the classification of an article known as a "wedge anchor." In a letter of December 8, 1983 (file 807180), this article was classified as an article of iron or steel, not specifically provided for, in item 657.25, Tariff Schedules of the United States (TSUS).

The article is called a stud, bolt, stud anchor, or concrete anchor by different trade members. However, the chief use is agreed upon: as an anchor in concrete. It is available in numerous sizes, ranging from 1-3/4 inches in length by 1/4 inch in diameter, to 12 inches in length and 1-1/4 inches in diameter. It is threaded on one end and is tapered on the other. The unthreaded end tapers slightly toward the middle of the shank. On the sample, the taper is 1-1/2 inches in length on a wedge anchor that is approximately 8-1/2 inches in length. A spring wedge is fitted onto the tapered end. A nut and washer are also fitted onto the wedge anchor.

The wedge anchor is designed so that the tapered end, fitted with the spring wedge, can be tapped into a predrilled hole having the same diameter as the wedge anchor. As the nut is tightened (when securing the article to be anchored), the tapered end is pulled up slightly and expands the spring wedge to form an efficient anchorage in the concrete.

Similar fasteners have been considered in prior ruling letters. In a letter of June 4, 1975 (file 035839; ORR Ruling 75-0132), a stud anchor fitted with an expander sleeve was held to be classified in item 657.20 (now 657.25), TSUS, rather than as a bolt because there was insufficient evidence of commercial designation as a bolt. Classification as a stud was not considered. In a letter of February 7, 1978 (file 054605), a similar anchoring device was classified as a stud in item 646.57, TSUS, because it was imported without the expander sleeve.

B12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

There are two issues in this case. First, it must be determined whether or not this fastener is a bolt, stud, or something else for purposes of tariff classification. Commercial understanding or trade designations may be relevant. Secondly, if the fastener without the spring wedge is considered a stud, it must then be determined whether or not the addition of the spring wedge makes it more than a stud.

Commercial or trade designation for this article is not uniform: stud anchor, wedge anchor, concrete anchor, or anchor bolt, are some of the names and depend primarily on the producer or distributor. However, one fact is certain: it functions as a stud. A stud is a type of a bolt, but is distinguished from "bolts" by its application. That is, a stud is usually anchored and provides a projection to which something may be fastened. The common meaning of the term "stud" was considered in Fastening Devices, Inc. v. United States, 40 Cust. Ct. 345, C.D. 2004 (1958). Under the common meaning of the term "stud" we affirm that the decision in our ruling of February 7, 1978 (file 054605), is correct.

The fastener, as it is bought and sold in the trade with the spring wedge, has numerous names which, on the surface, do not narrowly descibe it as a stud. Therefore, the question is raised as to whether, by the addition of the spring wedge, a stud becomes more than a stud.

The spring wedge is a fastener or holder used with studs and, if imported separately, would be classifiable in item 646.42, TSUS. Therefore, the wedge anchor is essentially a stud and a holder imported as assembled. Unlike the nut and washer, the spring wedge is not typically removed. Its design requires that it be assembled onto a stud before insertion into a predrilled hole. Because removal of a spring wedge could impair or prevent reuse if its original dimension could not be regained, the holder and stud are classifiable as an entirety.

The addition of a holder to a stud does not change the nature of the stud. For a reason similar to that by which a two-part bolt is classified as an entirety under the provision for bolts in item 646.54, TSUS, we hold that this two-part stud is classified as an entirety under the provision for studs in item 646.57, TSUS. We do note that the classi-

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B13

fication decisions on two-part mine bolts have been premised on the fact that they are known in the trade as bolts. The fastener in issue does not enjoy such unanimity of recognition. However, the rule of construction is that a tariff term is used in its common and commercial meanings, which are presumed to be the same. In the absence of contrary legislative intent or proof of a specific commercial designation, the common meaning controls. In this case, the evidence is not conclusive as to the commercial meaning, although it is often referred to as a stud or bolt anchor. However, inasmuch as the common meaning of "stud" is applicable to the most significant component, the entirety should be classified as a stud.

The nut and washer are separately classifiable. Their identity is not merged with the stud, and there is no provision for classification of studs with nuts and washers under a single provision. Therefore, the nut is classified in item 646.56, TSUS, and the washer in item 646.70, TSUS.

The stud and anchor are classifiable as an entirety under the provision for studs in item 646.57, TSUS.

The ruling letter of December 8, 1983 (file 807180), is modified to the extent that the wedge anchor is classifiable in accord with this decision. Also, the ruling letter of June 4, 1975 (file 035839, referenced as ORR Ruling 75-0132), is revoked, as is any other ruling or portion of a ruling that is not consistent with this decision.

Sincerely,

Harvey B. Fox

District Director of Customs
127 Water Street
Ogdensburg, New York 13669

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0712-4-000131

This protest was filed against your decision in the liquidation on various dates of eight 1983 Champlain entries covering shipments of Abiform Forms Paper 65 produced by [redacted] in Canada.

This ruling concerns the correct tariff classification of this paper.

FACTS:

The protestant claims that Abiform Forms Paper 65 is nothing more than standard newsprint paper which is either too heavy or too light to meet the specifications for standard newsprint paper under T.D. 56349. It claims that the paper has a higher brightness and that when the paper fails to meet the requirements of standard newsprint in item 252.65, Tariff Schedules of the United States (TSUS), it is properly classifiable under the provision for printing paper not specially provided for, in item 252.67, TSUS, which is a duty-free provision. It also claims that there is an established and uniform practice of classifying this paper in item 252.67, TSUS.

You argue that this is a special paper made to meet the requirements of the printing forms business. You argue that the subject paper has a special brightness and that it is chiefly used for the printing of various forms. You state that the Canadian shipper indicated to the Champlain Customs officer that practically all of this type of paper is being imported for use as business forms. You conclude that the paper in question is classifiable

074564

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

c1

under the provision for writing paper weighing over 18 pound per ream, in item 252.75, TSUS, dutiable at the time of entry at the 1983 rate of 4.2 percent ad valorem.

ISSUE:

Is Abiform Forms Paper 65 (now known as Abiform 65) classifiable in item 252.67, TSUS, or in item 252.75, TSUS?

LAW AND ANALYSIS:

The main question here is whether the chief use of Abiform Forms Paper 65 is as writing paper. In order to determine this, we must first determine the class or kind of articles to which Abiform Forms Paper 65 belongs.

In a supplemental brief submitted by counsel for the protestant on September 13, 1984, counsel argues that the class or kind of articles should be composed of all groundwood printing paper with the following characteristics:

(1) The paper is not impregnated, not coated, not surface-colored, not embossed, not ruled, not lined, not printed and not decorated;

(2) The pulp is made from at least 10 percent mechanical wood pulp;

(3) The paper has a basis weight of 20 pounds to 55 pounds (per 25 inch by 38 inch — 500 sheet ream) or equivalent;

(4) The paper has a smoothness of 20 to 180 Sheffield, and

(5) The paper has a brightness of 65 to 70 Elrepho.

To this end, counsel has submitted estimated figures purporting to show that the chief use of such a class or kind of articles is for commercial printing, e.g., for advertising inserts, direct mail flyers, mail order catalogues and magazines.

We reject the category of class or kind proposed by counsel for the protestant as too broad. Including such a wide range of basis weights, smoothness and mechanical wood pulp percentages in the same class or kind is almost like saying that all white paper is the same class or kind of paper.

C2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

071564

Instead, we find that Abiform Forms Paper 65 is part of a class or kind composed of groundwood paper with the following characteristics:

(1) The paper is not coated, not impregnated, not ruled, not surface-colored, not embossed, not lined, not printed and not decorated;

(2) The paper has a brightness of 65 to 70 Elrepho;

(3) The paper has a finish of 140 to 180 Sheffield; and

(4) The paper has a basis weight of 30 to 45 pounds per 25 inch by 38 inch — 500 sheet ream.

(5) The paper is imported in rolls with one of the following widths:

(a) 29-3/4 inches or 29-23/32 inches,
(b) 28-1/2 inches,
(c) 25-1/2 inches,
(d) 23-1/2 inches, or
(e) 14-7/8 inches or 14-27/32 inches.

All the evidence we have with regard to this class or kind of paper indicates that such paper is chiefly used for business forms use. The name of the product was, until the time of this protest, "Abiform Forms Paper 65." (We note that counsel for the protestant has informed us that the trade name of Abiform Forms Paper 65 has recently been changed to Abiform 65.)

Abiform 65 was advertised by the protestant as a forms paper. In a "Marketing Bulletin" from [redacted] dated April 19, 1982, which announced a "new product line" consisting of Abiform, 65 GE brightness, in four different basis weights, the three heavier grades were said to have been developed in direct response to market requests for a grade of business forms paper. The highest grade paper was advertised as intended for multi-part forms and carbonless coating applications.

The Champlain import specialist has advised us that almost all of the importations of Abiform 65 are being shipped to business forms manufacturers in the United States. The end use of paper which is imported by business forms manufacturers is as business forms paper.

074564

C3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Finally, Abiform is described by a Canadian government publication as a forms paper. In the Canadian government publication "Generic Identification of Paper and Paperboard Brandnames" (1984 issue), both Abiform 65 and Abiform 70 are listed as groundwood forms paper, on page 3 of the publication. (We note that four of the other papers which the protestant would include in the same class or kind as Abiform 65 — i.e., Premium 70, HBX Offset, RP 65, and HBX Roto — are described on pages 12 and 13 of the same Canadian government publication as groundwood papers, not groundwood forms paper.)

In light of the evidence mentioned above, we find that the chief use of the class or kind of articles to which Abiform 65 belongs is as business forms paper. Both T.D. 72-207 and Legal Determination 82-0071 classified as writing paper similar papers which were intended for conversion into computer output forms and business forms. Inasmuch as T.D. 72-207 and Legal Determination 82-0071 found that paper chiefly used for business forms is classifiable as writing paper, and inasmuch as the subject paper is chiefly used for business forms, the correct classification for Abiform Forms Paper 65 is as a writing paper in item 252.75, TSUS.

The protestant has submitted an estimate of 2748 entries covering Abiform 65 liquidated in item 252.67, TSUS, from 1977 to 1982. As we noted above, however, the file contains a "Marketing Bulletin" from Abitibi dated April 19, 1982, which announced a "new product line" of Abiform 65 in four basis weights. Inasmuch as Abiform 65 was proclaimed to be a "new product line" in April 1982, the claim of an established practice for Abiform 65 dating from 1977 is clearly incorrect. All of the liquidations claimed prior to 1982 are based on the liquidations of paper which, while named "Abiform," are not Abiform Forms Paper 65, the subject of this protest.

074564

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

HOLDING:

Abiform Forms Paper (now known as Abiform 65) is chiefly used for business forms. It is properly classifiable as a writing paper in item 252.75, TSUS.

The protest should be denied in full. A copy of this decision letter should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

(Signed) J. T. Roth

Re: Decision on Request for Internal Advice No. 76/84, Concerning Unfinished Elevator Guide Rails

Dear Sir:

Under the provision of section 177.11(a) and (b)(4) of the Customs Regulations (19 CFR 177.11(a), (b)(4)), you requested advice on the tariff classification of certain hot-rolled shapes which are dedicated to use as elevator guide rails (also known as T-rails). This ruling is our decision on the classification issue.

FACTS:

The merchandise in issue is a basic shape formed in a rolling mill from a billet. It is a hot-rolled carbon steel shape weighing over 0.29 pound per linear foot, and is not drilled, punched, or otherwise advanced. It is in the approximate shape of a "T" and is said to be dedicated to the sole use as a vertical guide rail for an elevator.

After importation, the merchandise is further processed as follows:

1. Straightening to a tolerance of 1/32 inch over a length of 16 feet.

2. Machining of the blade or stem to a level of smoothness of 0.25 micrometers or better. This involves the removal of up to approximately 1/16 inch from each of the three sides of the blade.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

074917

3. Machining of the end. This constitutes squaring each end and then milling a groove in one end and a tongue in the other; drilling four holes in each end; and milling the flange side of each so that it is flat for approximately 8 inches from each end.

4. Deburring of the machined ends and application of a rust-inhibitor on all the machined surfaces.

The imported lengths are approximately 16 feet long, and are in 8, 11, 16, and 18.5 pound categories for guide rails.

It is your position that the imported merchandise is an unfinished guide rail which is merely further processed by finishing operations and is, therefore, classifiable as a part of an elevator in item 664.10, Tariff Schedules of the United States (TSUS). Counsel for the importer claims that the operations performed on the imported merchandise are substantial and, therefore, the T-shapes are not unfinished guide rails for tariff purposes.

ISSUE:

Does the processing, performed on imported T-rails, constitute substantial additional processing for the purpose of determining whether it is an unfinished article or a material?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076917

LAW AND ANALYSIS:

Headnote 1(iv), Part 2, Schedule 6, TSUS, in pertinent part, reads as follows:

> Part 2 headnotes:
>
> 1....This part does not include...
> (iv) other articles specially provided for elsewhere in the tariff schedules, or parts of articles.

In construing this exclusion, the courts have held that a provision for parts of a named article is sufficient to exclude an article from classification under a specific provision in Part 2 of Schedule 6 if the article is a part of an article. General Interpretative Rule 10(ij) is not controlling in such cases. Nissho-Iwai American Corp. v. United States, 602 F. Supp. 88 (Ct. Int'l Trade 1984), affirmed on Appeal No. 85-1259 (CAFC, August 30, 1985); The Servco Company v. United States, 68 Cust. Ct. 83, C.D. 4341 (1972), affirmed 60 CCPA 137, C.A.D. 1098 (1973).

The classification of guide rails as parts of elevators in item 664.10, TSUS, is not in issue. Administrative rulings are on point: ruling letters of July 3, 1975, and December 1, 1980 (files 039300 and 061976, respectively). Our ruling of April 9, 1979 (file 057698), in which rectangular plates, specially flattened and cut, were classified as unfinished parts of machines, is instructive in this case. The plates, precision ground after importation, had only one use.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

074917

Although an article is dedicated to a sole use, it is not considered a part for tariff purposes if, after importation, it must be subjected to substantial additional processing. John V. Carr & Son, Inc. v. United States, 72 Cust. Ct. 19, C.D. 4500 (1974); The Servco Company v. United States, supra.

Although this principle has been clearly stated by the courts, the application turns on the facts of each case. In this case, there is a provision for parts of elevators. The imported T-rails are rolled to the basic configuration of finished guide rails and are identifiable as individual sections. The milling, end finishing, and drilling are necessary to put each section into a condition for use, but these operations are finishing operations which, for purposes of the T-rails, are not "substantial additional processing" as required by the test. The specific nature and configuration of each T-rail at the time of importation establishes what the article is and its use. The machining operations are surface and end finishing operations. See The Servco Company, supra. Furthermore, unlike the wire in Avins Industrial Products Co. v. United States, 72 Cust. Ct. 43, C.D. 4503 (1974), the imported articles have no other stated use.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

074917

HOLDING:

The lengths of hot rolled T-rails are classified as unfinished parts (guide rails) of elevators, in item 664.10, TSUS, rather than as angles, shapes, or sections, of steel in item 609.80, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Re: Decision on Protest and Application for Further Review of Protest No. 0712-4-000139, dated January 25, 1984

Dear Sir:

The above-referenced Protest and Application for Further Review of Protest were timely filed against your decision in classifying certain floor coverings under the provision for floor coverings of pile or tufted construction, of man-made fibers, in which the pile or tufts were inserted or knotted into a pre-existing base, in item 360.83, Tariff Schedules of the United States (TSUS). The merchandise was entered on October 19, 1983, Entry No. 84-272883, liquidated on October 27, 1983. This ruling is our decision on the issue.

FACTS:

The imported merchandise consists of various grades of carpeting on rolls of up to 96 inches in width and approximately 180 yards in length. The merchandise consists of domestically produced greige goods (nylon yarn which has been inserted by needle, i.e., tufted, into a woven polypropylene backing) which have been dyed in Canada and returned for processing into automotive carpets. After having been dyed in Canada, the carpeting was imported into the United States and subjected to the following processing operations: unrolling and undercoating with a plastic extrusion of polyethylene and modified polymer; drawing through heated rollers to bond the carpeting and the extruded base; cutting to size; dielectrical sealing of heel pads to the top surface of each piece; heating and pressure molding of each carpet piece with a layer of scrap fiber into the shape of the floor pan for a particular motor vehicle; and punching of holes in the carpeting to permit installation of various automotive components after the carpeting is placed in a vehicle. For the sake of this ruling, the

C11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

carpeting at the time of importation is considered to be specifically designed for and solely used in the automotive industry. Any other use would be considered a fugitive use for purposes of this determination.

The protestant claims that the imported carpeting is a fabricated component within the meaning of Headnote 2(a), Subpart B, Part 6, Schedule 6, TSUS. In support of this, the protestant states that the carpeting is dedicated to automotive use and is recognizable as automotive carpeting. The court's decision in John V. Carr & Sons, Inc. v. United States, 76 Cust. Ct. 162, C.D. 4652 (1976), is cited as dispositive of the issue. You claim that the imported carpeting is precluded from classification as a fabricated component because it is in a material length. You cite numerous cases which distinguish between unfinished articles and materials for purposes of tariff classification.

ISSUE:

Is the imported carpeting a fabricated component for purposes of Headnote 2(a), Subpart B, Part 6, Schedule 6, TSUS?

LAW AND ANALYSIS:

An article entered as original motor-vehicle equipment under the provisions of the Automotive Products Trade Act of 1965 (APTA) must be a fabricated component within the meaning of Headnote 2(a). The term "fabricated component" was discussed in the legislative history to APTA. House Report No. 537, dated June 21, 1965, at page 27. The relevant language is as follows:

> The term "fabricated component" is a term of limitation which embraces finished or unfinished components actually incorporated into a motor vehicle. The term does not, however, include materials, such as metal plate, sheet, strip, wire, pipes and tubes, and textile piece goods. In other words, although at the time of importation that component does not have to be in a condition completely ready for assembly without

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C12

> further fabrication, it must at a minimum be so far processed as to be physically recognizable as a component in an unfinished state.

The term "fabricated component" under APTA has been construed by the court in only one judicial opinion, John V. Carr & Sons, supra. The merchandise considered in Carr was brake hose in various material lengths. The hose was specially designed for high pressure hydraulic brake systems in trucks. It was recognizable in the industry as automotive brake hose. The court held that it was a fabricated component under APTA.

Under the long-standing meaning of the term "material" for purposes of tariff classification, the hose in the Carr case was a material. The numerous decisions cited by the government in that case established the precedent for determining whether imported merchandise is a material or an unfinished article. The test requires, in essence, identity of an individual article. The court in Carr stated that these decisions were inapplicable to the facts and issue before it. The conclusion to be drawn concerning the principle of the Carr case is that we need to distinguish between the term "material" as used in the legislative history for APTA and as used for tariff classification purposes. Such a distinction, however, will not affect the tariff classification. It only enters into the determination as to whether a material, if classified under a provision that covers articles both in material lengths and as individual articles, is a fabricated component for purposes of APTA.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C13

075013

The merchandise in issue is clearly in material lengths for classification purposes and is classifiable in item 360.83, TSUS. This is similar to the situation presented in Carr concerning material lengths of hose. In Carr the court noted that the hose was clearly identified by markings and other evidence as automotive brake line hose, and was recognizable as such.

The carpeting product in issue is solely used in automotive applications. The technical specifications for its construction limit its application to the automotive industry. The carpeting is recognizable as such, and, therefore, is similar to the brake hose in Carr. Secondly, and more significantly, the carpeting material is not known as textile piece goods. Arguably, the carpeting material is a textile fabric in the piece. As such, it would seem to be excluded from APTA treatment under the above-quoted legislative history. However, in a letter received from the American Textile Manufacturers Institute, Inc. (ATMI), we were advised that automotive carpeting "does not fit within the term 'piece goods' as it is used in the textile industry." The high degree of engineering, the specificity of use, and the manner in which it is sold are conclusive in precluding the carpeting material from consideration as textile piece goods. In view of the Carr decision and the definite statement from ATMI, the carpeting material would not be encompassed by the named exemplar, textile piece goods, as a material excluded from APTA.

In summary, the carpeting material is designed for automotive applications, is recognizable as such, and is not textile piece goods.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Therefore, the carpeting is a fabricated component for purposes of APTA.

HOLDING:

For the above reasons the carpeting material is a fabricated component for purposes of tariff treatment under APTA. The protest should be allowed in full. A copy of this decision should be given to the protestant at the time notice of action is given on Customs Form 19.

Sincerely,

Harvey B. Fox

Mr. John E. Hawes
System Integrators, Inc.
P.O. Box 13626
Sacramento, California 95853

Dear Mr. Hawes:

This is in further reference to your letter of January 8, 1985, in which you requested information as to the dutiable status of the Hell Digiset LS 210. The merchandise is a product of West Germany.

The Digiset LS 210 is described as a typesetting system consisting of three modules, an IP 100 image processor, a flatbed recorder and a printer. The IP 100 receives font and other typesetter or text data through interfaces from other domestically sourced input generating equipment. The processor allows further adjusting of print and images regarding toning, slanting, size, etc., and allows for full page laser scanning. In the recorder, film is exposed to the laser signals emitted by modulator electronics and optical components. The film is processed in the printer.

While you contend the system is duty-free under the provision for typesetting machines in item 668.25, Tariff Schedules of the United States (TSUS), we find that that classification is only applicable to the flatbed recorder in question. While you cited court decisions for an opposite conclusion, those decisions did not deal with editing and film developing equipment peripheral to phototypesetters, and, in fact, the typesetters in litigation did not even deal with full-page images. We further find that the IP 100 and the printer are classifiable under the provision for

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D2

machines, not specially provided for, in item 678.50, TSUS. The current column 1 rate under that provision, applicable to products of West Germany, is 3.9 percent ad valorem.

Boston, Massachusetts 02109

Dear Sir:

Re: Decision on Application of Further Review of Protest 0401-4-000339, Classification of Base Paper

Counsel for the protestant describes the process of manufacturing Glorythene Black/White Photographic Base Paper (Code Number P 380) as follows:

1. Paper of 100 percent wood pulp stock is made on a conventional Fourdrinier papermaking machine. The paper weighs 144 grams per square meter.

2. One side of the paper is then coated with polyethylene in an extrusion process. This is the white surface of the imported product which is its face. A chill roll on the extruder imparts the desired finish (glossy, matte, or embossed) to this face side. This layer of coating weights 38 grams per square meter.

3. The underside of the paper is coated with polyethylene which is black in color at the same time that step No. 2, above, occurs. This simultaneous coating is known as the tandem extrusion process. That is, it is a one-pass operation in which both sides are coated. The layer of black polyethylene weighs 40 grams per square meter.

4. After being cut to size, the paper is completely manufactured and ready for export to the United States. After importation, the paper is sensitized for use in photography by the application of light sensitive emulsions to the face side (i.e., white side).

5. This paper is used in the instant photography process. When the paper is ejected from the camera, processing chemicals are released onto the white side of the paper. The black pigment

D4

THIS DOCUMENT MAY BE RELEASED TO THE

on the underside prevents light from entering through that side. In seconds, the image photographed is developed directly onto the paper. The user then has a photographic image on the white side of the Glorythene paper.

Information contained in the file is to the effect that prior to 1962, all photographic base papers were coated with a baryta coating. This was to impart the required surface to enable the sensitizer to achieve the right degree of smoothness after the sensitizing coating was applied. In 1962, the Wiggins Teape organization introduced resin coated papers as an alternative to baryta coated paper. At the same time, the Kodak organization also introduced a similar product, and virtually all photographic base papers are now coated with a polyethylene resin coat on both sides. The finish or surface of the polyethylene is achieved by the chill roll. This chill roll can achieve a glossy, matte or embossed finish. The protestant claims that this paper is still purely and simply a photographic base paper specially designed for the sensitizing industry, and although baryta coated papers are still used to a very limited extent for certain specific purposes, the major industry product is resin or polyethylene coated paper. We note that a specification sheet for the product from the Polarid company bears the title "Photographic Base Paper."

The question is whether the imported base paper is classifiable under the provision for basic paper to be sensitized for use in photography, in item 254.05, TSUS (as the importer claims), as other impregnated paper in item 254.85, TSUS, or as a plastic article in item 774.55, TSUS.

It is the port's position that this is not a basic paper because it has the look and feel of two colored plastic sheets. The essential character is imparted by the plastic, and the paper seems to serve no purpose but to bind the plastic sheets together. Finally, the concerned import specialists argue that the plastic layers are functioning portions of the material. The plastic surface is sensitized and thus the product cannot be a paper to be sensitized.

The import specialists are concerned that the paper has no function other than to serve as a backing or a binder. The plastic layers are the functioning portion of material, imparting to the product the essential characteristic. Because of this concern we questioned counsel on this point. He advises that the imaging process used here is the same as when baryta coated photographic base papers were in use. This is the way all photographic base papers are used. Regardless of the thickness or finish of the coating, the image is always developed on the sensitizing materials that sit on top of the coating.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D5

075882

In consideration of the foregoing it is our conclusion that the paper in question will ultimately be used in the same manner as papers to be coated with baryta which are unquestionably classifiable under item 254.05, TSUS, as basic paper to be sensitized for use in photography. The fact that this paper is an improvement or a variation from the baryta type should not require a different classification. C.D. 4179 noted.

For the foregoing reasons you should allow the protest in full. A copy of this decision should be furnished to the protestant along with the Form 19 Notice of Action.

Sincerely,

Arthur P. Schaffner

Mr. Victor S. Samara
Samara Brothers, Inc.
34 Exchange Place
Jersey City, New Jersey 07302

Dear Mr. Samara:

Your letter of January 22, 1985, requests a ruling on the tariff classification of two overall and long sleeve shirt sets, styles 5075 and 6075 to be imported from the People's Republic of China. Both samples were sent to Headquarters. They are of the same fiber composition and the same general construction. Only the bib design differs.

Number 5075 has a bib with a horizontal band along the top, with the remainder of the bib shirred beneath. Number 6075 has a higher bib with a curved or scooped front and back. These distinctions are insufficient to create different classification in the tariff items under consideration here; therefore, this ruling will govern both style numbers.

The samples consist of 100 percent woven cotton corduroy overalls with shirts of 65 polyester and 35 percent cotton woven fabric. The shirts have button cuffs and full button closures. The shirts are not ornamented. The overalls are ornamented with textile appliques and embroidery stitching. The overalls have self-fabric suspenders that are to be threaded through the fabric loops inserted in the shoulder seams on the shirts. The two parts are to be imported together and are intended to be worn together.

You state that you intend to import this merchandise in infants' sizes 9-24 months and in toddler sizes 2, 3 and 4.

This matter was referred to Headquarters for resolution because it was necessary to clarify whether a new headnote to the tariff dealing with playsuits should lead to any changes in the tariff treatment of two-piece garments claimed to be playsuits. In our recent ruling, 075949, dated March 11, 1986, we noted that the standards for determining whether two garments were classified together

D7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

under the tariff include reference to Customs Textile Category Guidelines (CIE 36/79), the way the garments are known and marketed, their use, the construction design and composition of the garments, and the way they may be worn together. We also noted that several factors must be evaluated before they yield a classification result, so they do not consist of a formula to be applied mechanically.

The overall and shirt sets, in infants' sizes up to and including 24 months of age and in toddler sizes (2,3, and 4) are classified in item 384.0933, Tariff Schedules of the United States Annotated, as "other ...infants' wearing apparel, ornamented: Of cotton: Other: Not knit: Other coveralls, overalls, jumpsuits and similar apparel; other playsuits, washsuits sunsuits and similar apparel: Coveralls, overalls, jumpsuits, and similar apparel, whether or not known as playsuits: Infants'," dutiable at 20 percent ad valorem (1986), requiring textile category designation 337.

These items apply to your samples because the two parts are imported as a unit and are designed to be worn together. The loops on the shoulder serve the function of keeping the suspenders from falling down during an active child's play. While each garment might conceivably be worn alone or in combination with other garments, the function of the shoulder loops would not be fulfilled by separate wear of the shirt, nor would the suspenders be kept up securely when the overalls were worn with a different shirt.

It is difficult to determine with any certainty whether the buyers would find the shirt loops feature which secures the suspender to be of much value. However, for our classification purposes we note that the feature performs a real function in connecting the garments during wear and that the function goes beyond the trivial, or incidental.

You are advised to contact your local Customs office prior to importation to determine the current status of any import restraints or requirements. This ruling should be attached to the entry documents filed on importation.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

076003

Gail T. Cumins, Esq.
Sharretts, Paley, Carter & Blauvelt, P.C.
Eighty Broad Street
New York, New York 10004

Dear Ms. Cumins:

This is in reference to your submission concerning the tariff classification of foamed polyethylene beads, products of Japan. Polyethylene pellets are said to be impregnated with a blowing agent (freon gas) under heat and pressure. When the pressure is released the pellets expand to form the foamed polyethylene beads. The foamed beads are described as being up to 100 times less dense than the pellets, and the degree to which they are expanded can be controlled by the foaming process.

Subsequent to importation, the beads are used by various molding plants for molding into a variety of solid shapes. In the molding process the beads are subjected to further expansion and fusion to create a variety of products from drinking cups to rigid packing material shapes.

The question is whether the foamed polyethylene beads are considered basic forms classifiable as a polyethylene resin in item 445.30, TSUS; or an advanced form classifiable under the provision for other expanded, foamed or sponge plastics, or articles wholly or almost wholly of such plastics in item 770.80, TSUS.

Headnote 2, Part 4, Schedule 4, TSUS, in defining the term "synthetic plastics materials," states that the plastics may be in solid, semi-solid, or liquid condition, such as flaked, powders, pellets, or granules. In explanation, the Tariff Classification Study, Explanatory Materials, CIE 1/64, Vol. 1, p. 303, states that products included as "synthetic plastic materials" are plastics in the first stage of manufacture, i.e., in physical forms such as liquids, pellets, flakes, and other forms from which finished or semi-finished products may be made. In volume 2 of the Study, page 666, it is noted that another technique for producing styrene foam articles is to place partially pre-expanded styrene beads into a mold and simultaneously introduce steam which causes the expanded beads to further expand and adhere to one another and fill the mold cavity. The Study notes on page 664 that items 770.30-770.80, cover expanded, foamed, or sponge plastics and articles wholly or almost wholly of such plastics.

D9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076003

Despite these explanations in the Tariff Classification Study, it is argued that the expanded beads are another basic form within the definition of the synthetic plastics materials headnote, that they are "a more expeditious form for the molders use," a form which can be changed by extrusion into various forms which are themselves advanced beyond the resin state. The beads, it is argued, are basic forms which can be processed into any number of molded products. It is maintained further that as pellets, which are extruded products, are considered a material resin by the headnote definition, the foamed bead should be so likewise considered, since it is not further advanced.

While admitting the basic utility of the expanded bead in that it is not dedicated to any specific use, the fact remains that it is a pellet which has been processed beyond the first step of resin manufacture. While still not a final form, the beads are no longer considered a basic form by the headnote definition. This interpretation is reinforced by the Tariff Classification Study.

We think the key to solving this question is the superior heading to items 770.30-770.80 which provides for expanded and foamed plastics as well as articles of such plastics. This coupled with the explanation in the Study, convinces us that although the product under consideration is a foamed pellet, an expanded bead with a versatility of use and lack of dedication, it is nonetheless advanced beyond the state of plastics provided for in Schedule 4, TSUS.

For the foregoing reasons the foamed polyethylene beads are classifiable under the provision for flexible expanded, foamed or sponge plastics in item 770.80, TSUS.

Sincerely,

Arthur P. Schaffner

William L. Dickey, Esq.
William L. Dickey & Associates, P.C.
International Square
1825 I Street, N.W., Suite 400
Washington, D.C. 20006

Dear Mr. Dickey:

This is in response to your letter of April 29, 1985, in which you petition for reconsideration of a New York Customs ruling dated January 25, 1985, that you applied for on behalf of Asfor Steel Corporation. In that matter, assemblies, each consisting of two wheels, two sets of journal roller bearings and one axle for railroad freight cars, were classified under the provision for parts of freight cars in item 690.35, Tariff Schedules of the United States (TSUS). The current column 1 rate required under that provision is 5.9 percent ad valorem.

You contend the merchandise is properly classifiable under the provision for wheels imported with axles in them in item 690.30, TSUS, a free provision. You further state that this tariff treatment would be consistent with our tariff treatment of similar merchandise in a ruling interpreting the repealed dutiable list of the Tariff Act of 1930. However, the tariff classification in the New York ruling under review was consistent with our interpretations under the TSUS as reflected, for example, in T.D. 66-267(14), 101 Treas. Dec. 682.

Your request for a change in position is largely based on exceptions to the "more than" rule. More specifically, you contend that the addition of journal bearings does not change the essential character of wheel and axle assemblies and cite judicial precedent you believe pertinent. However, we find the cited authority is inapposite here. Item 690.30 is not a provision for wheel and axle assemblies and, therefore, the essential character of such assemblies cannot be taken into consideration. Rather, the provision is only for wheels and parts. It merely contains, in effect, an instruction that

D11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

when wheels are imported with axles inserted, the axles will be regarded as entireties with the wheels. There is nothing in the provision authorizing a journal bearing to also be regarded as an entirety with a wheel.

In this connection, it should be further noted that while the expressio unius rule does not apply to TSUS headnotes, it does have some application to TSUS breakouts. Accordingly, we are of the opinion that the specific authorization for treating a wheel and attached axle as an entirety excludes similar treatment for an attached journal bearing. Nor do we find that any other theories of tariff classification apart from exceptions to the "more than" rule, such as any theory that bearings are wheel parts or axle parts, can be legitimately applied to avoid that conclusion.

Accordingly, we remain of the opinion that the instant assembly constituting an entirety which is other than or more than wheels and an axle is dutiable under item 690.35, and the ruling in question, therefore, is affirmed.

Sincerely,

John T. Rock

SUBJECT: Difference of Opinion on Customs Form 6431

In your memorandum of April 30, 1985, you transferred the difference of opinion on Custom Form 6431 dated December 29, 1983, concerning the tariff classification of the Minolta Color Meter II made in Japan. This matter is listed as the last difference on page 2 of CIE 89/79, Suppl. No. 45, dated March 1986. Our decision follows:

ISSUE:

The sending port contends the merchandise is classifiable under the provision for optical electrical measuring, checking, analyzing or automatically-controlling instruments and apparatus in item 712.05, Tariff Schedules of the United States (TSUS). The column 1 rate of duty required under that provision in 1983 was 17.5 percent ad valorem. The national import specialists are of the opinion that the merchandise is covered by the provision for photographic light meters in item 722.75, TSUS. The 1983 column 1 rate under that provision was 4 percent ad valorem.

FACTS:

It is stated in the sender's remarks that the color meter simultaneously measures the ratio of three colors of a continuous light source or combination of sources and then recommends appropriate correction filters to balance them with

D13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

the type of film used in the camera. It may be assumed the articles employ dichroic optical systems with photoelectric detectors.

LAW AND ANALYSIS:

The main question here is the extent the provision for photographic light meters may be considered broad enough to encompass the subsequently created or commercially significant color meters. Lexicographic and technical references we have consulted show that "light meter" is merely another term for "exposure meter," and that the latter is a device for measuring light intensity for the purpose of shutter and/or aperture settings or control. While it is true the instant articles also measure light intensity, they do not do so until the light is separated into its three primary color constituents, and the measuring or analysis that takes place is for the purpose of filter selection.

With respect to commercial references, we have found only one listing of the instant meters under the category "exposure meters". See catalogs and advertisements of the Cambridge Camera Exchange, Inc., 7th Avenue and 13th Street, New York. All other commercial references to the devices in question rather include them under the broader "meter" category. In this connection, we note that the instant articles are comparatively expensive costing several times more than the typical exposure meter thereby further suggesting a different category of merchandise.

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

HOLDING:

1. The foregoing facts are not persuasive of the view that legislative intent would be served by regarding color meters as subsequently created articles within the preexisting scope of the provision for photographic light meters in item 722.75, TSUS.

2. Accordingly, we find that the merchandise is properly classifiable under the provision for optical electrical measuring, checking, analyzing or automatically-controlling instruments and apparatus in item 712.05, TSUS.

Arthur P. Scheffler

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: MAY 22 1986

FILE: CLA-2 CO:R:CV:G
076295 JCH

076295

TO : Chief, Customs Information Exchange
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Difference of Opinion on Customs Form 6431

In your memorandum of May 7, 1985, you transferred the difference of opinion on Customs Form 6431 dated April 18, 1985, concerning the tariff classification of scanning disc printers made in Switzerland. This difference is listed as the eighth difference on page 1 of CIE 89/79, Suppl. No. 45, dated March 19, 1986.

The merchandise is the Gretag 3142 scanning disc printer. It was initially described by the sending port as using paper cassettes which after exposure were taken to a developer. The national import specialists after examining literature for the merchandise were of the opinion the merchandise produced internegatives which are negatives made from transparencies.

It is assumed that the sending port's classification under the provision for enlargers in item 722.18, TSUS, presupposes an optical system for producing positives or negatives either smaller or larger than the original. If that is the case, and the merchandise contains an internal light source, the merchandise would be correctly classifiable under the provision for enlargers in item 722.18. See Ehrenreich Photo-Optical Industries, Inc. v. United States, Slip Op. 86-35 (Ct. Int'l Trade, decided March 26, 1986). It is our understanding that the distinction between enlarging printers in that matter and the enlarging printers which were the subject of United States v. E. Besler & Company, 64 CCPA 121, C.A.D. 1193 (1977), was that the latter did not contain an internal light source. A distinction was not made because one produced positives while the other made internegatives.

It would appear, therefore, that classification of the instant enlarging printers, whether or not they produce internegatives, under item 722.18 is correct. However, since we have not been furnished any technical information describing the merchandise, this finding should not be regarded as conclusive with respect to any subsequently filed protests and applications for further review which may show that the facts are different from as we understand them to be as indicated above.

076365 TLL

076365

District Director of Customs
Baltimore, Maryland 21202

Re: Application for Further Review of Protest No. 1303-4-000399

Dear Sir:

The issue involved in this case is whether the imported paper is classified under item 252.67, Tariff Schedules of the United States (TSUS), as book paper and printing paper, not specially provided for, or whether the paper is classified under item 252.75, TSUS, as writing paper weighing over 18 pounds per ream.

The paper at issue is Risco Bond Offset Paper. The paper in question was used to print U.S. Government tax forms. These are to be filled in by pen, typewriter, etc.

This paper is 68 gsm in weight. Sixty-eight grams per square meter is commercially equivalent to 18 pound (17 x 22-500) writing paper, including bond, form bond, and ledger. The basis weight for tariff purposes is 41.8 pounds per Customs ream. The paper was classified on liquidation as writing paper.

The protestant claims the paper should be classified on reliquidation as printing paper, based on an asserted conformity to a government standard for offset book (printing) paper: JCP A60, published by the Joint Committee on Printing, Congress of the United States (JCP).

Before getting into a discussion of JCP standards, reference to two Headquarters precedents is relevant. In T.D. 72-207, Headquarters held certain bond paper to be classified under item 252.75, TSUS, by stating:

> The chief use of this paper in the United States has been determined to be as writing paper for conversion into computer output forms and business forms for the recordation of data by pen, pencil, typewriter or similar device as a means of communication by one or a limited number of copies to one or a limited number of receivers. Generally, the only printing done in the conversion processes is lines, spaces, column headings, and incidental text. This paper is commercially designated as a writing paper by the paper industry within the United States.

E3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

076365

Headnote 2(d), Part 4, Schedule 2, TSUS, defines writing paper in the following manner:

> (d) The term "writing paper" includes, but is not limited to, papers such as ledger, letter, manifold, mimeograph, note, onionskin, tablet, and typewriter papers.

In C.S.D. 82-91, Customs followed T.D. 72-207, and held that computone paper used in the production of computer printout forms, is properly classified under item 252.75, TSUS. In so holding, Customs pointed out:

> ....Apparently, the chief use of computone in the United States is in making computer printout forms for recording data by pen, pencil, typewriter, or similar device. The only printing done on the paper is lines, space column headings, and incidental text.

In the context of C.S.D. 82-91, the tax forms to be printed after importation are designed for "recording data by pen, pencil, typewriter or similar device."

C.S.D. 82-91 went on to state:

> In Treasury Decision 72-207, the Customs Service held that form and computer bond paper was classifiable as "writing paper" in item 252.75, Tariff Schedules of the United States (TSUS), noting that such paper is commercially designated as writing paper by the paper industry within the United States.
>
> The only way in which computone differs from the form bond paper that was at issue in T.D. 72-207 is in the composition of its stock. The form bond which was the subject of the Treasury Decision was composed of 100 percent chemical wood pulp, while computone contains 67 groundwood pulp.
>
> The designation "writing paper," however is a use provision. The percentage of groundwood pulp will not cause computone to be classified differently from the form bond in T.D. 72-207 unless it is shown that the different stock results in a different end use.

We note that writing paper is a chief use provision except for the types of paper specifically enumerated in Headnote 2(d), Part 4, Schedule 2, TSUS, supra. These papers (e.g., ledger, letter, onionskin, etc.) are writing papers by tariff definition, regardless of their use. Insofar as JCP standards are concerned, the paper in question conforms to a JCP standard D10 for writing paper, white and colored. This standard specifies a paper weighing 68 gsm, which is used, among other things, to print forms. With respect to forms, the standard says, "Printed matter may include text, line illustrations, and ruled forms."

E4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

With regard to the standard for printing paper, your attention is directed to the May 1984 Supplement to the Dictionary of Paper, Fourth Edition, which provides:

> Printing papers consist of papers designed to be used by commercial printers, lithographers, magazine publishers, book publishers and similar establishments for mass communications and other end uses where a multitude of copies are required for broad distribution. The kinds of paper in this category include such grades as uncoated offset, machine finished and english finish book papers, high bulk book papers, supercalendered book, and clay filled supercalendered papers.
>
> The products utilizing printing papers are generally sold in completed form, i.e., material is not added after the printing stage. These industries are generally characterized by long press runs on high speed equipment. The material printed on the paper is the sole purpose and intent of the document and imparts all the knowledge to be gleaned, by itself, with no further addition.
>
> Printing papers are usually printed on both sides, and in many cases receive copy requiring heavy ink coverage. Therefore, opacity is generally considered to be a very important characteristic.
>
> End Use Products
>

After review of the imported paper, we are of the opinion that the paper does not meet the above standard.

In sum, we conclude based on Headquarters precedent and JCP standard D10 that Risco Bond Offset Paper is classified under item 252.75, TSUS. Consequently, you are directed to deny the protest. Please see that the protestant is provided a copy of this decision with the returned Customs Form 19.

Sincerely,

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1101-4-000021, Classification of Liquid Burnish Golds and Liquid Bright Platinum Lustres, Products of England

The gold and platinum lustres are claimed by the importer to be classifiable under various provisions: paint in item 474.30; pigments in item 473.88 or 473.90; varnishes in item 474.46; benzenoid paints in item 408.48; benzenoid colors, dyes or stains in item 410.22, mixtures in 432.25, TSUS, benzenoid mixtures in item 407.16, or paints in 413.50; or the similitude provision in item 798.00, TSUS.

Customs classified the merchandise as a benzenoid mixture in item 413.51, TSUS. These products are composed of oil soluble, organo-metallic complexes of gold and/or platinum, palladium, rhodium, or other platinum group metals, together with trace amounts of silver and/or base metal in oil soluble, organo-metallic form, and are in solutions of aromatic and aliphatic organic solvents plus synthetic and natural resins. They are used to impart gold or platinum film to the surfaces of glazed earthenware, porcelain and glassware. After decorating the article it is placed in a furnace and fired to a high temperature (1050-1250 degrees F on glass, or 1300-1500 degrees F on glazed ceramic). During the firing the organic components are volatilized, and the metals reduced back to their metallic form with precious metal fused to the substrate.

<u>GMC 2858/M</u> - is said to contain 3.6 percent mercury-gold amalgam, 30 percent gold sulforesinate, with binders and solvents, all of which are volatilized upon firing, and none of which is benzenoid.

<u>Burnish Gold - GMC 3733-S</u> - Gold Powder, 31.6 percent; mercury-gold amalgam, 19.7 percent; with solvents and binders which are volatilized on firing, and none of which is benzenoid.

E6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Burnish Gold 5375/M - Contains gold powder 15.0 percent; gold sulforesinate 26.0 percent; silverphosphate and copperphosphate, with binders and solvents, none of which is benzenoid.

GMC 5691/S - Contains 20.8 pecent powders, binders and solvents includes methyl cyclohexanone, 4.4 percent, a benzenoid chemical.

Burnish Gold 3209 - Contains gold powder 8.2 percent, gold sulforesinate 32.9 percent; with solvents and binders that include cyclohexanane 4.5 percent and nitrotoluene 1.6 percent, both benzenoids.

Burnish Gold-GMC 112-T, GMC 6957 - Contains gold resinate 43 percent, along with solvents and binders, including 1 percent phenolic resin and 2.6 percent nitrotoluene, both benzenoids.

Bright Platinum - PBC 3805 - Contains 18.0 percent sulforesinate, isophorone 13.5 percent, methylcyclohexanone 3.9 percent and nitrotoluene 3.9 percent.

Bright Platinum - FBC 3807 - Contains 11.3 percent gold sulforesinate, 13.0 percent platinum sulforesinate, 2.4 phenolicresin, 10.7 percent cyclolexanone, nitrobenzene, 3.8 percent.

As to the claim that the products are pigments, the term "pigments" as used in Headnote 1, Part 9(B), Schedule 4, TSUS, would not include the powders in issue. The headnote definition refers to products commonly known as pigments, which the precious metal powders are not. The "Explanatory Notes to the Brussels Nomenclature" defines solutions or suspensions of metallic compounds in solvents used for decorating ceramics or glassware, as lustres, with the most widely used being gold, silver, aluminum and chromium. Thus, though they may be somewhat similar to pigments, they are regarded as being different, and distinct, as are glass frit and engobes.

Another contention is that the lustres are paints or varnishes. Headnote 2, Part 9C, Schedule 4, TSUS, defines paints as pigment dispersions in a liquid vehicle which are suitable for application on a surface as a thin layer and which harden to an opaque solid film. However, in the case of the lustres, instead of pigments these are precious metals, which, when applied to a surface, have to be fired; and rather than a surface coating, it penetrates the porous texture ceramic or glass article. The materials are not considered varnishes either, in view of the headnote definition, as they are not transparent or translucent films.

E7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

As to those products which contain benzenoid binders, solvents or other chemicals, it is asserted that the de minimis rule should obtain. The test, as stated by the court, for determining whether or not a benzenoid ingredient in an otherwise non-benzenoid product is considered de minimis is: (1) whether it was present in a minute amount, and (2) whether it played a role in the principal function of the product or exhausted its usefulness prior to the performance of the principal function. United States v. Aceto Chemical Co., 64 CCPA 78 C.A.D. 1186 (1977). In applying the de minimis test for products such as these in issue, any benzenoid in an amount of about 3 percent or more would not be considered de minimis.

Classification is as follows:

Burnish Gold 2858/M - not in chief value of precious metal and not containing any benzenoids would be classifiable as a mixture in item 432.25, TSUS, dutiable at the highest rate applicable to any component material. The highest rate would be for item 605.28, TSUS.

Burnish Gold GMC 3733-S - Classifiable as an article of precious metal, gold, in item 656.10, TSUS.

Burnish Gold 5375/M - Classifiable in item 656.10, TSUS.

Burnish Gold 5691/S - Classifiable in item 656.10, TSUS.

Burnish Gold 3209 - Classifiable in item 656.10, TSUS.

Burnish Gold GMC 112-T, GMC 6957 - Not in chief value of a precious metal and as the benzenoid content is considered de minimis, it is classifiable as a mixture in item 432.25, TSUS, with the rate of duty dependent on the highest rate of a component material.

Bright Platinum PBC 3805 - Classifiable as a benzenoid mixture in item 407.16, TSUS, in view of its benzenoid content.

Bright Platinum FBC 3807 - Classifiable in item 407.16, TSUS, in view of its benzenoid content.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC_____

076386

You are instructed to deny the protest, except to the extent that reclassification as indicated above results in a partial allowance.

A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schifflin

Mr. K. H. Lee
J. D. Bertolini Industries, Ltd.
132 West 36th St.
New York, New York 10018

Dear Mr. Lee:

In your letter of May 20, 1985, to Customs in New York, you inquire as to the tariff classification of refrigerated containers from Korea (presumably the Republic of Korea).

The containers are described as being of steel and aluminum construction with fiberglass interior lining and insulated with polyurethane. They are not designed, however, to allow heating or cooling liquids to circulate in their walls. They measure 8 ft. x 8 ft. x 20 ft. We are informed that the nose walls of these containers have cutouts to receive refrigeration units. The containers will arrive without the refrigeration units, which will be of American origin and installed after importation. Each unit will have a combination motor/compressor, evaporator, condenser, and fan.

Competing provisions we have considered are item 640.30, Tariff Schedules of the United States (TSUS), covering other containers of base metal chiefly used in the packing, transporting, or marketing of goods (temporarily free of duty under item 911.80), versus item 661.35, TSUS, covering refrigerators and refrigerating equipment, whether or not electrical, and parts thereof. We have previously held that containers such as the ones here involved, imported with their refrigeration units, are classifiable in item 661.35. The subject containers imported without refrigerating units are, in our opinion, unfinished refrigerating equipment, and also classifiable under item 661.35, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Dear Sir:

Re: Decision on Application for Further Review of Protests Nos. 3304-4-000186 and 3304-5-000032

The two above-captioned protests and application for further review were taken against your decision in the classification of printed, plastic-coated woven polyethylene bags, the product of Canada. Protest 3304-4-000186, dated December 21, 1984, covers entry 84-206502-5, entered March 14, 1983 and liquidated November 23, 1984. Protest 3304-5-000032, dated March 14, 1985, covers entry 83-328101-2, entered September 30, 1983 and liquidated January 11, 1985. The protests involve the same parties and same merchandise.

ISSUE:

The protestant claims the bags are classified in item 772.20, Tariff Schedules of the United States (TSUS), the provision for containers of rubber or plastics, with or without their closures, chiefly used for the packi g, transporting, or marketing of merchandise, dutiable at 5.3 pere[illegible]orem (1983).

[illegible]ified the bags in item 385.53, the provision for bags and sacks, or other shipping containers, of textile materials: of man-made fibers, dutiable at 8 cents per pound plus 13.2 percent ad valorem (1983).

E12

076495 / 076496

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

The issue is whether the bag is of textiles or of plastic.

FACTS:

This importer requested internal advice on similar merchandise which was answered by this office in IA 155/83 (IA), Headquarters Ruling Letter (HRL) 073348, December 30, 1983. That IA ruled that the bag was classified in item 385.53, TSUS. A sample of that merchandise is available at Headquarters and we have examined it.

We have obtained a sample of the instant merchandise from entry 83-328101-2. This bag is in dimension and construction the same as the merchandise in the IA. The only difference is that this bag is printed in white with predominantly green markings. A safety mark "a" (for asbestos?) is present in the side pleats of both bags in red and black. The white printing on the instant bag extends to about 1 inch from the bottom where the transparent polyethylene woven material is most obvious.

LAW AND ANALYSIS:

The IA noted that its bag "appears to have been coated on its exterior surface with a light layer of transparent rubber or plastics material...." That appearance is equally true in the instant bag. The woven polyethylene strips would readily come apart if the coating of plastic material were not present holding them together.

E13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

076495 076496

Headnote 5(a) to Schedule 3, TSUS, directs Customs to classify coated or filled fabrics in Schedule 7 (as plastic), if coated with "nontransparent rubber or plastic." As noted in the IA, the coating on these bags is transparent, meaning that they are ineligible for Schedule 7 classification, when made of woven textiles. This analysis is directed to the claim advanced by the protestant than the bags are "white opaque." The instant bag is fully transparent where the white printing stops at the bottom of the bag and is also transparent through the area printed in white where the white coloring was not impressed in the interstices of the polyethylene weave.

It should be noted, however, that a more thorough printing job would not be enough to turn this woven bag into a non-transparent article classifiable in Schedule 7. Headnote 5, relied on by the protestant, is not activated by the mere addition of a color over a transparent coating. This mere printing, whether or not it changes the color, does not change the fact that the plastic coating on the woven polyethylene is transparent. Our examination of the sample indicates that the only material change between the bag in the IA and the instant bag is a change in color.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E14

076495/076496

HOLDING:

You should deny both protests. These bags are classified in item 385.53, TSUS, as liquidated. A copy of this decision should be attached to each Customs Form 19 to be returned to the protestant.

Sincerely,

Harvey B. Fox

Mr. Anthony M. Dix
Commercial Director
Edward Hall & Brothers Ltd.
Botany Works, Whaley Bridge
Stockport SK12 7DQ, Cheshire
England

Dear Mr. Dix:

This is in reference to your inquiry on the classification of bleached honeydew cotton. The cotton is described as not suitable for spinning due to honeydew contamination, which is said to be a sticky, brown, sugar-like substance secreted on cotton by white flies. This is claimed to be a problem with cotton from Sudan, and makes it unspinnable. One solution is said to be the bleaching of the cotton, which involves boiling the cotton with caustic soda, to remove all the natural fats and waxes as well as the honeydew. It is noted that as all the natural lubricant has been removed from the cotton by this process, it is not spinnable. However, the unspinnability is not a factor in this case, as the cotton in question is intended for manufacture into surgical cotton-wool products which do not require spinning.

A sample of the bleached honeydew cotton was submitted to the Cotton Quality Research Station of the Department of Agriculture which determined that the sample was the equivalent to a 1-3/32 inch staple cotton. While not regarded as a machine waste, the sample was said possibly to be from dirty waste. A French technical paper on the nature of this cotton was also submitted. The paper emphasized the major problems faced in spinning "sticky raw cottons due to contamination by Honeydew," and "that using finishing products in raw cotton remains a delicate problem."

The question is whether this type of cotton is a waste.

Cotton fiber does not become a waste merely because it is incapable of being spun. Headnote 1(a), Part 1, Schedule 3, TSUS, in defining waste, lists certain wastes which are by-products of a manufacturing operation or a manufactured product which has been reduced to its constitutent fibers.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F2

However, additional evidence made available to this office on this type of cotton describes it in different terms. A report prepared by the Cotton Quality Research Station describes the physical properties of a sample of honeydew cotton believed identical to the merchandise in question. It was stated that the bleached cotton fibers could be sprayed with lubricants and spun into many types of yarn up through 20 count. Though not an ideal starting material, it was believed that the bleached fibers could be used to produce yarns as high as 40 count. Also it was noted that the harsh bleach used to remove the honeydew was not necessary. It was stated that honeydew contamination was readily removed with warm water and a wetting agent. It was also noted the honeydew contaminated cotton was suitable for spinning on open-ended spinning machines.

Waste is generally refuse, surplus, and useless stuff resulting from a manufacturing process and commercially unfit, without remanufacture, for the purposes for which the original material was suitable. Harley Co. v. United States, T.D. 41644 (1926). See also Cheltenham Supply Corp. v. United States, 63 Cust. Ct. 271, C.D. 3908 (1969). In United States v. Salomon, 1 Ct. Cust. Appls. 246, T.D. 31277 (1911), the court held that cotton linters, short bits of cotton fibers that adhere to the seed during the ordinary process of ginning and are later recovered by a special gin, were not waste. In Salomon Bros. v. United States, 2 Ct. Cust. Appls. 431, T.D. 32196 (1912), it was held that broken jute fibers rejected by a carding machine, which may be spun or felted, were not waste -- residuum with commercial value and used for the same purpose as the superior quality fibers, except that it produces an inferior product, is not waste. Finally we note C. J. Tower & Sons of Buffalo, Inc. v. United States, 56 Cust. Ct. 274, C.D. 2638 (1966), which held that tire cord yarn which, because of oil spots and other defects, was not useable as such, was not waste because it still fell into the common meaning of the term "yarn."

In view of the above, the subject merchandise is not a waste for tariff purposes. Rather, this type cotton is classifiable under the provision for fibers of cotton, processed but not spun, in either item 300.45, TSUS, if having a staple length of under 1-1/8 inches, with duty at the rate of 5 percent ad valorem, or, if having a staple length 1-1/8 inches or more, in item 5 cents per pound plus 5 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076498

Importations under these provisions are subject to item 955.06, TSUS, TSUS, which imposes an absolute quota of 1000 pounds per 12-month period beginning September 11 in any year.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Angela De Gaetano, Chief
Customs Information Exchange
U.S. Customs Service
6 World Trade Center, Rm. 450
New York, New York 10048-0945

Dear Ms. De Gaetano:

A Customs Form 6431 from the port of Blaine, Washington, concerns entry No. 935745 covering a shipment of cedar hanging planters from Canada to Skagit Gardens Inc., Mount Vernon, Washington. This difference of opinon is listed as the ninth item on page 1 of C.I.E. N-89/79, supplement 45, dated March 1986.

The merchandise in question is hanging planters, 10 inches by 10 inches, of cedar. The issue presented is whether the planters are classifiable under the provision for household utensils and parts thereof, all the foregoing not specially provided for, of wood, other, other, in item 206.98, Tariff Schedules of the United States (TSUS), or under the provision for articles not specially provided for, of wood, in item 207.00, TSUS.

The initiating port thinks that the hanging planters are classifiable as articles of wood, not specially provided for, in item 207.00, TSUS, because they can only be used outdoors, i.e., in patios and shopping centers. This port claims that the instant planters are not decorative planters for household (i.e., indoors) use -- although, interesting enough, the port claims that the outside use is for decoration. This port cites Headquarters Ruling Letter (HRL) 481.39 of January 30, 1969, in support of its position.

The replying port thinks that, if chiefly used in the home, the hanging planters are classifiable as household utensils, not specially provided for, of wood, in item 206.98, TSUS. It called the importer, who stated that he uses the planters for growing plants, then sells them to garden centers for retail sales. The importer stated that, in at least 90 percent of the sales, the planters are bought by individuals for use in the home.

The replying port argues that the planters are chiefly used in the household. It points out United States v. Lipman's, 52 CCPA 59, C.A.D. 859 (1965), in which the court said:

FS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _ ___

> ...it would be an unnecessary and artificial limitation to restrict the term "household"...to the interior of a dwelling....The term "household" is broader than the mere physical structure of a house.

In Lipman's, supra, the court also affirmed the lower court's finding that:

> ...there is an increasing tendency on the part of suburban and rural householders to spend much leisure time out of doors, in areas immediately adjacent to the home. The incidence of patio living and outdoor dining is of such common occurrence as to fall naturally within the purview of judicial observation, from which it is reasonable to infer that implements of such living respond as readily to the characterization of household utensils as do the more conventional articles whose uses are confined to the interiors of homes.

The replying port further notes that there is nothing in the construction of the instant hanging planters which distinguishes them from articles of the same class or kind which are chiefly used in the home.

General Interpretative Rule 10(e)(i) states that chief use of an article is to be determined based upon the use in the United States at, or immediately prior to, the date of importation, of articles of that class or kind to which the imported articles belong. Chief use depends upon the chief use of the class or kind of such articles, not upon the actual use of the particular shipment in question.

We agree that the hanging planters are of the class or kind of planters which are chiefly used in the home. We also note that the instant merchandise is sold for retail and that the importer states that 90 percent of the sales are for use in the household. While this evidence indicates only actual use of the instant merchandise, we believe that, in this case, the actual use is representative of the chief use of the class or kind of such planters. We note finally that HRL 481.39 conflicts with United States v. Lipman's , supra, and that a decision of the Court of Customs and Patent Appeals takes precedence over an administrative ruling letter. We note that similar wooden flower or plant containers have been classified in item 206.98, TSUS, in HRL 069928 of September 2, 1982, and in HRL 055365 of January 11, 1979.

We find that the instant cedar planters are classifiable under the provision for household utensils of wood in item 206.98, TSUS.

Sincerely,

Ned H. Marshak, Esq.
Sharretts, Paley, Carter,
and Blauvelt, P.C.
80 Broad Street
New York, New York 10004

Dear Mr. Marshak:

This is in response to your request for a ruling on the tariff classification of a "Lego Basic Building Set With Storage Case." Mr. Levy of your firm presented the original request in his letter of February 1, 1985, New York control no. 812368. Mr. Belanger of your firm made an oral presentation of the issues and the arguments at a conference at Headquarters on April 3, 1986.

You provided a sample. The sample consists of two parts. One part is labeled "1932" and "Basic Building Set With Storage Case." It contains 52 interlocking plastic pieces for children of age 3-5. The pieces come in a cardboard box, adorned with colored pictures of the product, sales information, and a UPC bar code, suitable for use in retail sale. The cardboard box measures 6-3/8 inches by 9 inches and is about 1-3/4 inches deep. The other piece is a storage case which is marked with a label as being, among other things, "Easy to Carry." The storage case appears to be constructed entirely of highly durable child-proof plastic. It is said to hold over 330 pieces and to snap tight for secure storage. The box, somewhat resembling a child's plastic lunchbox, opens on one side with a hinge at the other side of the hatch-like lid. At the other side of the lid are flexible plastic catches that snap, securing the lid. When the case is closed, it is designed to be carried by hand with the help of horizontal indentations on both sides of the case, about 4-1/2 inches long.

The cardboard box does not fit inside the carry case. It is sold, the box on top of the case, with clear plastic wrap attaching the two pieces together for the purposes of the special offer.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

076529

The issue is whether the carry case is classified together as an entirety with the toy blocks. The blocks alone are classified under the provision for toy building blocks, bricks and shapes in item 737.55, Tariff Schedules of the United States (TSUS), dutiable at 6.6 percent ad valorem (1986).

You have argued primarily that the case and the toy blocks are classified together as an entirety. As such, you argue that the line of entireties cases that includes Miniature Fashions, Inc. v. United States, 54 CCPA 11, C.A.D. 894 (1966) and Lafayette Radio Electronics Corp. v. United States, 57 CCPA 62, C.A.D. 977 (1970) would direct Customs to recognize the two pieces as an entirety. This line of cases describes those instances where two articles are imported together and where the value or identity of one part is minimal and subordinated to the value and identity of the other part.

We regard the instant merchandise as distinguishable factually from the principles derived from the cited cases. The importer markets separately at least two storage cases, numbers 781 and 782, the latter said in the enclosed catalog to be "available soon!" The case has a separate market identity without any one of the collections of toy bricks placed inside of it. The value of the case is also substantial in comparison to the blocks included with this special offer. The special offer sticker attached to the plastic holding the blocks box to the case says that the comparable value of the item sold separately is $12.99, based on the suggested retail price of number 322 blocks and number 782 storage case. Our field examination of retail sale of comparable Basic Building Sets from this manufacturer showed an average retail price for the building set alone to be $5.99 and the comparable carry case to be $4.99. This evidence does not support your claim that there is no commercial value to the case. On the contrary, we find factually that the case has substantial value, about 80 percent of the retail price of the blocks, and therefore, would not be controlled by the principles in the entireties cases cited.

In particular, the rationale of Lafayette, supra, is inapplicable here because the storage case is neither an integral part of the block play, nor are the comparable toys sold with carry/storage cases. By contrast, as shown

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

076529

in the importer's own catalog, they are usually sold separately. Moreover, there is nothing about the carry case inherently related to toy plastic blocks. The case for the transistor radio in Lafayette, supra, has no independent function or usefulness without the radio that it was sold with; however, this case retains its utility when separated from the box of blocks. It may be used to store and carry other blocks sold by this importer, comparable blocks, or small toys, in general. To respond to your argument in the citation of Ikora, Inc. v. United States, 66 Cust. Ct. 262, C.D. 4202 (1971), the carry case is distinguishable in principle from a glass dish that fits into a silver tray forming an entirety which the court noted had "no commercial or general acceptance" as an article to be used "independent of" the thing with which it is imported. Here there is no mandate by design or construction, by commercial marketing realities, or otherwise, that the case be used with these blocks. In fact, the case, advertised to hold 330 pieces, comes with only 52 pieces. The disparity between the capacity of the carry case and this set highlights the absence of a constructive association of the two separate and distinct articles comprising the proposed importation. They do not form an entirety by a standard definition employed by the Customs Service or the courts.

Another way to find an entirety, applicable to importations of articles having comparable value, is to see if, when joined or put together, the individual identities of the articles merge into a new identity that is a new and different article of commerce. When these blocks with the carry case are put together they do not merge to form a new article of commerce with a new identity. The identity of the articles remains unaffected.

During the conference it was established that no claim is being made that the carry cases are "containers of usual types ordinarily sold at retail with their contents" in the language of General Headnote 6 to the TSUS. The cardboard box, not the carry case, is the container of the usual type ordinarily sold at retail, in this instance.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Having determined that the two articles do not form an entirety, we must classify the case. This case is classified in item 706.62, TSUS, the provision for luggage of other materials, dutiable at 20 percent ad valorem (1986).

Sincerely,

Arthur P. Scheffler

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-2-014189

This protest was filed against your decision in the liquidation on November 12, 1982, of entry No. 83-224-018-0 dated October 13, 1982, covering shipments of two styles of men's nylon/leather jogging shoes manufactured in Taiwan. The styles are constructed alike but are different colors.

ISSUE:

The protestant claims the joggers are classified in item 700.35, Tariff Schedules of the United States, the provision for footwear, of leather, for men, youths, and boys, dutiable at 8.5 percent ad valorem.

You classified the joggers in item 700.95, TSUS, the provision for other footwear, other, dutiable at 12.5 percent ad valorem.

The issue is whether the joggers are in chief value of leather or of rubber and plastics.

FACTS:

The protestant submitted a component cost breakdown sheet wih its initial protest. This breakdown showed the cost per pair for the leather component, including cutting and trimming to be $1.01. The rubber or plastic component

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

was $1.29, including cutting and trimming. On its face, therefore, the component costs of the materials required the classification in chief value of rubber or plastics.

Before the matter was decided, the attorney for the protestant called Headquarters with the request to substitute new cost information provided by the manufacturer or importer. We honored the request because Customs was in the process of reconsideration and clarification of the costs to be included in a computation of the values of component materials for athletic footwear. This clarification is set forth in our file 073826, February 15, 1984, and our telex of April 25, 1984, (telex) from the Assistant Commissioner (Commercial Operations) regarding athletic footwear, file APP-1-CO:T:D:E MF.

The "new" cost breakdown provided by the protestant is dated September 10, 1982, and shows material for both split and pigment leather, as well as cut and trim, equalling $1.03 per pair. The rubber and plastic component costs, including cut and trim, equal $1.01. per pair. The protestant also provided a component weight breakdown dated August 1, 1984.

LAW and ANALYSIS:

The protestant argues that a portion of the costs for equipment, electric power, and overhead should be added to the leather and textile components to determine the true

076530

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

value of that component for comparison purposes. Our telex, supra, explains that Customs will consider as relevant: (1) actual labor and certain fringe benefit costs; (2) cost of molds and (3) costs of raw materials, including certain unrecoverable wastes. Costs not included were, among others, certain other fringe benefit costs and "depreciation of machinery or energy costs." Because the equipment, electric power, and overhead costs are not to be included according to the telex, they will not be considered here or allocated among components.

We consider material costs as a basis to which is added a portion of the labor cost. In the case of the uppers, the labor cost of stitching leather overlays onto the fabric uppers will be allocated among the materials comprising the uppers in proportion to their relative weights. C.S.D. 81-239, Headquarters Ruling Letter (HRL) 076494, July 10, 1981. When the component weight breakdown, dated August 1, 1984, is taken into to consideration, we note that the following parts comprise the upper by weight: (1) nylon (with tricot and foam); (2) PVC padded collar; (3) PVC inside lining, and (4) Split suede. These weights (in grams) are respectively: 38.8, 16.6, 10.8, and 98.6, making a total of 164.8. The toe box rubber piece and chemical

076530

F13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

sheet are not included here because they may have been added in a different subassembly. The proportion of the leather weight (98.6) to the upper weight (164.8) yields, when rounded, .6 or 60 percent. When .60 is multiplied with the 59¢, the resulting stitching labor cost is 35¢, to be allocated to leather. Using the same process, the rubber and plastic portion (27.4 grams) against the upper weight (164.8) yields, when rounded .17 or 17 percent. When .17 is multiplied by 59¢, the result is 10¢ to be allocated to the rubber and plastics portion. Both of these processes yield a subtotal for leather of $1.38 and a subtotal for rubber and plastics of $1.11.

The protestant urges us to disregard the 42¢ for "assembling and lasting", and the 57¢ for "EVA and outsole cementing" because "these costs are incurred in the final assembly only, after each separate component, i.e. sole and upper, has been finished and is in condition ready for assembly with the other component."

While we can accept the "assembling and lasting" labor cost as the cost that ultimately joins the two components, the EVA and outsole cementing is obviously not a final assembly. There can be only one final assembly and in the absence of evidence to the contrary, we conclude that the labor costs for final assembly are the ones labeled "II.2.

076530

F14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Assembling & Lasting." There is no additional entry for stockfitting, that is, cementing the outsole to the mid-sole prior to joining that cemented-together product to the upper. This entry represents stockfitting which is not final assembly. Therefore, entry II.4., "EVA and Outsole cementing" is the last labor cost to be attributed, and it is added solely to the rubber and plastic side. This addition brings the total for rubber and plastics to $1.68. Because $1.68 for rubber and plastic exceeds the leather total $1.38, the shoes are not in chief value of leather.

HOLDING:

The shoes are classified in item 700.95, TSUS. You should deny the protest. A copy of this decision should be attached to the Customs Form 19 to be returned to the protestant.

Sincerely,

Arthur P. Scheffler

Louis S. Shoichet, Esq.
Siegel, Mandell & Davidson
Counselors at Law
One Whitehall Street
New York, New York 10004

Dear Mr. Shoichet:

In a letter dated July 17, 1985, on behalf of the Berkshire Handkerchief Company, you inquired as to the dutiable status of certain nylon shopping bags produced in Taiwan. A sample was submitted for examination.

The sample, style No. 5322, is a double handle nylon tote bag. It measures approximately 20 inches wide by 13 1/2 inches high by 4 inches deep and has double carrying straps measuring approximately 20 inches in length. This bag has no interior pockets or other interior compartments, no closures, and has a zippered outer compartment at its bottom to allow for the insertion of an umbrella.

The issue presented is whether the merchandise is classifiable under the provision for luggage and handbags of other textile materials in item 706.41, Tariff Schedules of the United States (TSUS), or is precluded from classification thereunder, if considered a shopping bag, by virtue of the exclusionary language in Headnote 2(a)(ii) and (b) of Schedule 7, Part 1, Subpart D, TSUS.

Headnote 2(a)(ii) of Schedule 7, Part 1, Subpart D, TSUS, provides in pertinent part that "For the purposes of the tariff schedules — (a) the term "luggage" covers (ii) brief cases *** and like containers and cases designed to be carried with the person, except handbags as defined herein."

Headnote 2(b) of Schedule 7, Part 1, Subpart D, TSUS, provides that "the term 'handbags' covers pocketbooks, purses, shoulder bags, clutch bags, and all similar articles, by whatever name known, customarily carried by women or girls, but not including luggage or flat goods as defined herein or shopping bags."

We consider the case of J. E. Mamiye & Sons, Inc. v. United States, 85 Cust. Ct. 92, C.D. 4878 (1980), aff'd United States v. J. E. Mamiye & Sons Inc., 69 CCPA 17 (1981), and Legal Determination 82-0122 dated October 4, 1982, to be relevant to the issue involved here.

G2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The appellate court in Mamiye stated that "the structure of the statute clearly indicates that Congress used the term [handbag] in its broadest sense, covering all types of bags carried in the hand or on the arm." Also, the court construed "the term 'shopping bag' to mean a bag primarily used for shopping, that is, for carrying purchased articles from the place of purchase to the place of use. The court below found that [5] tote bags of the types here in issue, while useful for shopping are primarily used as a second handbag for the convenience of carrying additional personal articles that would not fit in one handbag. The record amply supports the conclusion that the chief use is to carry articles already in one's possession, such as books, packed lunches, umbrellas or extra shoes."

In Legal Determination 82-0122 dated October 4, 1982, it was stated that "tote bags will be regarded as more than shopping bags if they have one or more features in addition to being made of textile materials such as, but not limited to, inside or outside flaps, linings, compartments, any type of closure, or ornamentation or some other feature imparting a degree of quality to the article making it suitable for more than the transport of purchases once or only a few times. For example, a textile bag with no such features, and which is of such insubstantial quality that its life is clearly temporary, or it cannot be used without lining it with the bags merchandise is otherwise packaged in would not be regarded as of the same class of merchandise the Mamiye court was concerned with."

Upon reconsideration, we conclude the limitation imposed by Legal Determination 82-0122 that for a bag to qualify as a shopping bag it must be suitable for the transport of purchases once or only a few times and be of insubstantial quality is a too rigid interpretation of Mamiye. It is our observation that the decision in Mamiye rested on the failure of the government to show that the bags were primarily or chiefly used for shopping rather than on the physical characteristics of the bags.

The fact that style No. 5322 is designed to carry an umbrella which is a personal effect does not mandate its classification as luggage. However, as with the bags which were before the court in Mamiye, there has been no showing that style No. 5322 is of a type of bag primarily or chiefly used for shopping.

In view of the foregoing it is our opinion that double handle shopping bags represented by the sample are classifiable under the provision for handbags of other textile materials in item 706.4140, TSUS, and dutiable at the rate of 20 percent ad valorem. As products of Taiwan these bags are subject to quota/visa restraints.

Sincerely,

Arthur P. Schaffner

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: MAY 29 1986

FILE: CLA-2 CO:R:CV:G
076621 c

076621

TO : Area Director of Customs
New York Seaport Area
6 World Trade Center
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Your Memorandum Dated December 19, 1985 (File CLA-2-07:S:COM:N3G-341-210) Concerning the Tariff Classification of Double Handle Tote Bags Manufactured in Taiwan

In a letter dated July 17, 1985 (File No. 076621), the law firm of Siegel, Mandell & Davidson on behalf of Berkshire Handkerchief Co., inquired as to the dutiable status of a nylon shopping tote (style No. 5322). This merchandise is similar to a nylon folding tote bag (style No. 4010) which was the subject of a ruling issued by this office on March 18, 1985 (File No. 074556 c), holding it to be classifiable under the provision for other articles not specially provided for, of textile materials: ornamented in item 386.13, Tariff Schedules of the United States (TSUS), rather than under the provision for handbags of other textile materials in item 706.41, TSUS.

It is your position that an established and uniform practice exists to classify the same or substantially similar double handle tote bags as luggage under Schedule 7, Part 1, Subpart D, TSUS. For this reason and because you believe that style Nos. 4010 and 5322 have been purposely designed to be more than shopping bags in the tariff sense, you ask that the result reached in HRL 074556 be reversed.

You state in your memorandum that prior to December 27, 1978, Customs had a uniform practice to classify merchandise the same as item 5322 and the nylon folding tote within the provision for handbags and luggage. We note that similar merchandise described as a "nylon, open top, double handle shopping bag with a vinyl base" which was the subject of HRL 041791 dated January 2, 1976, was classified under item 389.60, TSUS, as other articles not specially provided for, not ornamented, of man-made fibers.

Also, you indicate that all ports have uniformily liquidated entries covering such bags as Berkshire's under the luggage and handbag provisions since October 1981. We note that on a CF 6431 from the port of Philadelphia dated September 26, 1982, you recommended that a nylon circe shopping bag be classified under item 386.09, TSUS, following the result reached in HRL 041791 dated January 2, 1976.

64

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

In view of the foregoing and the numerous varieties of "tote" bags that have been imported and classified at the various ports since 1981, we are not persuaded that an established and uniform practice of classification exists with respect to the classification of double handle tote bags.

The rationale for the result reached in HRL 072113 dated May 31, 1983, holding that the nylon circe shopping bag is classifiable as a handbag was based on the case of J. E. Mamiye & Sons, Inc. v. United States, 85 Cust. Ct. 92, C.D. 4878 (1980), aff'd United States v. J. E. Mamiye & Sons Inc., 69 CCPA 17 (1981), and Legal Determination 82-0122 dated October 4, 1982.

The appellate court in Mamiye stated that "the structure of the statute clearly indicates that Congress used the term [handbag] in its broadest sense, covering all types of bags carried in the hand or on the arm." Also, the court construed "the term 'shopping bag' to mean a bag primarily used for shopping, that is, for carrying purchased articles from the place of purchase to the place of use. The court below found that [5] tote bags of the types here in issue, while useful for shopping are primarily used as a second handbag for the convenience of carrying personal articles that would not fit in one handbag. The record amply supports this conclusion that the chief use is to carry articles already in one's possession such as books, packed lunches, umbrellas or extra shoes."

In Legal Determination 82-0122 dated October 4, 1982, it was stated that "tote bags will be regarded as more than shopping bags if they have one or more features in addition to being made of textile material such as, but not limited to, inside or outside flaps, linings, compartments, any type of closure, or ornamentation or some other feature imparting a degree of quality to the article making it suitable for more than the transport of purchases once or only a few times. For example, a textile bag with no such features, and which is of such insubstantial quality that its life is clearly temporary, or it cannot be used without lining it with the bags merchandise is otherwise packaged in would not be regarded as of the same class of merchandise the Mamiye court was concerned with."

Upon reconsideration of the matter, the reliance on the Mamiye case to classify the nylon circe shopping bag as a handbag appears to be misplaced. It is our view that the nylon circe shopping bag is primarily used for shopping. The limitation proposed by Legal Determination 82-0122 that for a bag to qualify as a shopping bag it only be suitable for the transport of purchases once or only a few times appears to be a too rigid interpretation of the Mamiye case. The bags involved therein were not considered shopping bags because of the failure of the government to show that shopping was the sole or even the chief use of the bags and not because of their physical characteristics.

We do not believe that the nylon circe shopping bag is similar to the bags involved in Mamiye. Specifically, it is designed to be folded and placed in a handbag and thereafter to be taken out and opened after purchases are made and thereafter used to carry the purchases home. The

GS

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ____

subject bag, unlike those involved in Mamiye, is not primarily used as a handbag. Consequently, it is our view that it was properly classified under item 386.13, TSUS.

Style No. 5322 which is the subject of a ruling request dated July 17, 1985, from the law firm of Siegel, Mandell and Davidson is also a man-made textile double handle tote bag. It measures approximately 20 inches wide by 13 1/2 inches high by 4 inches deep and the shoulder straps measure approximately 20 inches long. This bag has no interior pockets or other interior compartments, no closures, and has a zippered outer compartment at the bottom of the bag to accommodate an umbrella.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides that "For the purposes of the tariff schedules — (a) the term 'luggage' covers — (i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel."

The fact that style No. 5322 is designed to carry an umbrella which is a personal effect does not mandate its classification as luggage. However, as with the bags which were before the court in Mamiye, there has been no showing that style no. 5322 is of a type of bag primarily used for shopping. For this reason, it is our position that it is properly classifiable under item 706.4140, TSUS.

813152

076676

Rufus E. Jarman, Jr., Esq.
Barnes, Richardson & Colburn
475 Park Avenue South
New York, New York 10016

Dear Mr. Jarman:

You have requested a review, under 19 CFR section 177.2(b)(ii)(C), of New York ruling 813152 of April 17, 1985, on behalf of ITT Automotive Products World Wide Group. The Area Director ruled that the merchandise, a single function high mount stoplamp assembly from Italy, is classifiable under the provision for other sound or visual signaling apparatus, item 685.70, TSUS. You contend that the proper classification is under item 683.65, TSUS, as electric lighting equipment designed for motor vehicles.

The brake light assembly in question consists of a shell fabricated entirely from plastic, a plastic lens, molding screws, bulb, wiring, and electrical contacts. The assembly will be fastened to the package tray at the rear of a motor vehicle with the red lens showing through the back window and will provide an unambiguous signal when the operator of the motor vehicle steps on the brake pedal.

We agree with the New York ruling that these articles are properly classified under item 685.70. As you indicate in your letter, when item 683.65 was added to the tariff schedules, H. R. Rep. No. 342, 89th Cong., 1st Sess. (May 12, 1965), stated that it was to apply principally to equipment covered by the existing item 653.40, illuminating articles and parts thereof, of base metal, other, formerly classified as automotive parts. While a single center high mount stoplamp, required for all passenger cars manufactured after September 1, 1985, is considered a part of an automobile, it is not an illuminating article. "The articles classifiable under 653.40 are limited to illuminating articles." ITT-Thompson Industries, Inc. v. United States, 3 CIT 36, 41 (1982). The fact that an imported article is capable of lighting does not alone make it an illuminating article. "To serve as an 'illuminating article,' the article must be used to 'light up' something other than itself. While an article

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

67

which merely serves to light up itself may be illuminated, it can hardly be considered an illuminating article." Ross Products, Inc. v. United States, 58 CCPA 1, 5, C.A.D. 994, 433 F.2d 804 (1970). In holding that bicycle taillights, which "perform a function analogous to that of automobile taillights," Oxford International Corp. v. United States, 75 Cust. Ct. 58, C.D. 4608 (1975), were properly classified under item 653.40, the Customs Court found that the taillight bulbs lit up not only the taillight but also part of the bike and the road behind it; when turned on in a darkened room, they cast a beam of light illuminating objects in the surrounding area. Oxford at 64. "Item 653.40 describes the 'articles' in terms of the function of 'illuminating.' ...the use of the articles is a significant factor in item 653.40." Ross at 4. High mount stoplamps, which do not serve to light up the area around the vehicle, cannot be said to be described by the provision for lighting equipment for motor vehicles.

Rather than lighting up the surrounding area, like a taillight, a stoplamp gives a visual signal by means of a light when the motor vehicle operator steps on the brake pedal. "Item 685.70 encompasses only those devices whose function is to call attention to temporary or abnormal conditions." Oxford at 68. "[T]emporary operation to alert [sic] an emergency condition" is a necessary characteristic of articles classified under this provision. Carling Electric Co. (Carlingswitch, Inc.) v. United States, --CIT--, Slip Op. 84-60 (May 31, 1984), aff'd on other grounds, --CAFC--, No. 84-1532 (March 21, 1985). The high mount stoplamp is a single function device in a separate housing from the rear lamps of a motor vehicle to provide a more effective indication to following drivers that the vehicle is slowing or stopping. As a visual signalling apparatus, it is properly classified under item 685.70.

Sincerely,

Arthur P. Schaffer

P.O. Box 61050
Dallas, Fort Worth, Texas 75261

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 5501-3-000105

This protest was filed against your decision in the liquidation on August 26, 1983, of entry No. 223920 dated April 12, 1983, covering a shipment of stuffed toy unicorns.

FACTS:

The merchandise involved in this application for further review consists of plush toy figures of unicorns. Customs classified the unicorns under the provision for toy figures of animate objects, not having a spring mechanism and stuffed in item 737.30, Tariff Schedules of the United States (TSUS). Protestant contends that such merchandise is more appropriately classified under the comparable provision for toy figures of inanimate objects in item 747.47, TSUS, since a unicorn is an imaginary figure which possesses features which are a hybrid of features of more than one animate object.

ISSUE:

Whether the toy unicorns at issue are classifiable under the provision for toy figures of animate objects in item

69

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

737.30, TSUS, or under the provision for toy figures of inanimate objects in item 747.47, TSUS.

LAW AND ANALYSIS:

Headnote 3, Schedule 7, Part 5, Subpart E defines toy figures of inanimate objects in the following manner:

> For the purposes of the superior heading to items 737.47 and 737.49 and of item 737.51, "toy figures of inanimate objects" are only imaginary creatures that either --
> (i) do not possess features of human or other earthly creatures;
>
> (ii) possess both earthly and non-earthly features but are predominantly non-earthly in nature; or
>
> (iii) possess features which are a hybrid of features of more than one animate object.

Protestant claims that the unicorns involved in this protest should be considered inanimate since unicorns are a hybrid of more than one animate object. In support of this argument, dictionary definitions of the terms "unicorn" and "horn" have been offered. Protestant states that Webster's Third New International Dictionary (1967) defines "unicorn" as "a fabulous animal possibly based on faulty old descriptions of the rhinoceros and generally depicted (as in heraldry) with the body and head of a horse, hind legs of a stag, the tail of a lion, and in the middle of the forehead a single long straight horn held to be a sovereign remedy against poisoning" and that "horned" is defined as "having horns (a mythical beast), the unicorn."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076762

G10

An examination of the toy unicorn figure leads us to the conclusion that this merchandise is not a true hybrid as contemplated by Headnote 3. The unicorn is a simple, comical, cuddly representation of a horse with a horn appendage. This horn feature is merely incidental. There is no attempt to depict the hybrid creature described in the dictionary definition offered by protestant. This merchandise is distinguishable from true hybrid toy figures which have been considered by Customs to be inanimate. See e.g. C.S.D. 81-236, 15 Cust. Bull. 1202 (1981) concerning "Thun," Lizard Woman," "Beastman," and "Imperious Leader" and New York Rulings 811652 and 811821 concerning "Wuzzles." It is more similar to the subject of a recent decision on application for further review of Protest No. 2704-3-003580, Headquarters Ruling Letter dated October 25, 1985, fi e No. 075294 concerning a winged horse which was ruled to be animate.

HOLDING:

In view of the foregoing, this merchandise was properly classified under the provision for toy figures of animate objects, not having a spring mechanism and stuffed in item 737.30, TSUS. You should deny this protest in full.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G11

A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Chicago, Illinois 60607

Re: Consideration of Internal Advice No. 9/84, Classification of Autosol 2000

In H.R Ruling 073958 Autosol 2000, a two component system designed to form a plastic stencil print in a screen printing process, was classified as a benzenoid mixture in item 413.51, TSUS. The components consist of a vinyl based emulsion and a benzenoid diazonium salt solution used as a sensitizer and stabilizer. The components, although packaged separately, are intended to be mixed together, and therefore they are classified as an entirety.

On reconsideration, in behalf of the importer, affidavits were submitted from chemists familiar with the product. They maintain that a non-benzenoid sensitizer could be produced and used with the emulsion to accomplish the same purpose as that accomplished by using the benzenoid sensitizer. It is further maintained that the benzenoid component is in a minute amount, less than 1% of the product, and present merely to provide stability to the sensitizer, and has no effect on the polymerization process. It is therefore contended the benzenoid component should be ignored under the de minimis concept, with the entirety being classified as a polyvinyl alcohol resin.

Cases are cited to support the de minimis concept. United States v. Cavalier Shipping Co., 60 CCPA 152, C.A.D. 1103 (1973); F. W. Meyers and Co. v. United States, 54 Cust. Ct. 83, C.D. 4876 (1980); Aceto Chemical Co., Inc. v. United States, 64 CCPA 787, C.A.D. 1186. In each of these cases a benzenoid compound, a warning agent in one, a wetting agent in the others, was added to a non-benzenoid active ingredient. The court concluded in each case that they did not assist in the primary function of the main product in each case, and de minimis applied.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

613

However, in this case, the diazo sensitizer is a benzenoid compound, a high molecular weight, branched polymer which has a specific composition. It is, therefore, a benzenoid compound. For tariff purposes, a chemical compound is either benzenoid or non benzenoid. A part of a compound can not be considered non essential, otherwise the entire compound would cease to exist if part of the molecule were removed. It is not possible to ignore the benzenoid moiety and conclude a sensitizer remains. In this case the compound contains a benzenoid component and is therefore a benzenoid compound which is essential to the polymerization of the product itself.

The decision in I.A. 9/84 is affirmed.

Sincerely,

Arthur P. Schaffner

Mr. Lee J. Wilson
Reedrill, Inc.
P.O. Box 998
Sherman, Texas 75090

Dear Mr. Wilson:

In your letter of September 3, 1985, you inquire as to the tariff classification of a rock tooth which you proposed to assemble in Mexico with components of United States origin. A blueprint and other drawings were submitted.

You state the rock tooth is the actual cutting component of your line of rock drilling augers, and will be produced in Mexico by soldering (nickel silver alloy) tungsten carbide inserts to metal forgings (the drill body), hand deburr excess solder, paint, and pack 50 teeth per box. The forgings, carbide inserts, solder sticks and cardboard boxes are of U.S. origin.

The described rock tooth for rock drilling augers is a one-piece cutting tool. It would be classifiable under the tariff provision for interchangeable cutting tools for hand-tools or for machine tools, with cutting part containing by weight over 0.2 percent of chromium, molybdenum, or tungsten, or over 0.1 percent of vanadium, in item 649.43, Tariff Schedules of the United States (TSUS), dutiable at the rate of 8.2 percent ad valorem. We presume, however, that the requisite tungsten content is present.

Classification under the provision for parts of other excavating, levelling, boring, and extracting machinery, in item 664.08, TSUS, as originally recommended to you, is not applicable inasmuch as the provision in item 649.43 is more specific. One-piece drill bits, such as the one here, as well as the cutting portion of a two-piece rock drilling bit, are classifiable as cutting tools in item 649.43. The bit bodies imported separately are not cutting tools, but would be classifiable as parts, in item 664.08, if chiefly used with the particular class or kind of articles delineated thereunder.

Item 807.00, Tariff Schedules of the United States (TSUS), would impose a duty on the full value of articles assembled abroad in whole or in part of United States components, less the cost or value of such components. Item 807.00 applies only to fabricated components of United States origin that are designed to be fitted with other components in an assembly process, with no operations performed thereon except the attachment of the components to form the imported articles.

A3

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

Consequently, upon compliance with applicable Customs Regulations, allowances may be made under item 807.00 for the value of the tungsten carbide inserts and the metal forgings of U.S. origin which are merely soldered together to form the imported drill bits. No allowances, however, can be made for the solder sticks since they are considered to have lost their physical identity by a change of form and substance in the assembled drill bits. Generally, boxes and packaging materials of U.S. origin that are not advanced in value or improved in condition while abroad may be entered duty-free, under the provisions of General Headnote 6(b)(i), TSUS.

Information on importations under item 807.00, TSUS, and a copy of General Headnote 6(b)(i), are enclosed for your references.

Sincerely,

Arthur P. Schefflin

Margaret Hardy Sachter, Esq.
Soller Singer & Horn
No. 10 The Mews
421 Hudson Street
New York, New York 10014

Dear Ms. Sachter:

Your letter dated September 10, 1985, requests reconsideration of Headquarters Ruling Letter 075319 dated March 14, 1985, in which top and bottom components of a two-piece garment, style 9224, were classified separately. The top portion was classified under the blouse provision in item 383.27, Tariff Schedules of the United States (TSUS), category 339, and the panty was classified under the provision for other wearing apparel in item 383.30, TSUS category 359.

The submitted sample, style 9224, consists of two individual pieces connected by a single row of stitches. Each piece is constructed from a finely knit fabric of 53 percent cotton, 35 percent polyester, and eleven percent spandex. The bottom portion is a solid color panty that has elasticized waist and leg openings and a gusset sewn in the crotch. The striped sleeveless top coordinated to match the panty features a round neckline, foam shoulder pads and a straight hemmed bottom. The single row of stitches holds the top of the panty to the blouse. The stitches are located approximately two inches above the blouse's hem. The blouse hangs over the top of the panty.

This garment at hand is distinguishable from style 9224 in issue in HRL 075319 and 075512 dated June 29, 1985, because the row of stitching connecting the two components is firm. The garment is not easily separated into two parts. Thus, the merchandise has a commercial reality as a one-piece garment because it remains joined during normal use.

The merchandise appears to be in chief value of cotton. Contrary to your assertion that the merchandise is classifiable under the provision for other women's wearing apparel, not ornamented, of man-made fibers, knit, body suits in item 383.80, (now item 384.80) TSUS, it is classifiable under the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

AS

provision for other women's wearing apparel, not ornamented, of cotton, knit, other in item 384.3497, TSUSA, dutiable at the rate of 10.2 percent ad valorem, under category 359. There is no eo nomine designation for body suits under the provisions for women's cotton wearing apparel. This ruling will apply to the imported components only if they are securely fastened. Headquarters Ruling Letter dated September 10, 1985 (file no. 075319) will apply to those garments whose components are easily separated.

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox
Director Classification
and Value Division

The Honorable
Bill Goodling
Member of Congress
2020 Yale Avenue
Camp Hill, Pennsylvania 17011

Dear Mr. Goodling:

This is in further reference to your communication of September 12, 1985, on behalf of Mr. Thomas O. Roberts, President, Erin Supply Company, Inc., of Dallastown, Pennsylvania, concerning the tariff classification of certain work gloves manufactured in the Peoples' Republic of China and entered through the port of Baltimore.

It is Mr. Roberts' position that the work gloves involved are not woven or knit cotton gloves. He maintains that they are properly classifiable under the provision for gloves of rubber or plastics with fourchettes in item 705.86, Tariff Schedules of the United States, TSUS.

Samples of the work gloves have been submitted for examination. We have numbered the gloves for identification purposes. Sample No. 1 is made of vinyl coated knit fabric. Sample No. 2 is made of vinyl coated woven fabric with a cotton knit wrist and sample No. 3 is made of vinyl coated woven fabric.

Schedule 3, Headnote 5, TSUS, provides in pertinent part that "for the purposes of Parts 5, 6 and 7 of this schedule and Parts 1 (except Subpart A), 4, and 12 of Schedule 7, in determining the classification of any article which is wholly or in part of a fabric coated or filled or laminated with nontransparent rubber or plastics (which fabric is provided for in Part 4C of this schedule), the fabric shall be regarded not as a textile material but as being wholly of rubber or plastics to the extent that (as used in the article) the nontransparent rubber or plastics forms either the outer surface of such article or the only exposed surface of such fabric."

The legislative history to the cited headnote makes it clear that Congress intended the surface character of the fabric to govern its tariff classification. If the coated or laminated surface of the article or fabric in that article did not have a textile appearance or character, then that article or that portion of the article should not be considered as a textile for tariff purposes.

A7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

There are two requirements which must be met in order for the fabric to be considered rubber or plastics. The first requirement is that the rubber or plastic coating, filling or lamination must be nontransparent. The second requirement is that the textile surface character of the fabric must be eliminated.

An examination of the sample gloves shows that the textile character of the fabric has been retained after the application of the plastics coating material. The yarns comprising the fabric, and, in some instances, the spaces between the yarns can be seen.

The gloves designated as sample No. 1 are classifiable under the provision for cotton gloves, made from a pre-existing machine knit or woven fabric, or any combination of such fabrics, not woven, in item 704.5808, TSUS, and dutiable at the rate of 25 percent ad valorem.

The gloves designated as samples Nos. 2 and 3 are classifiable under the provision for cotton gloves, made from a pre-existing machine knit or woven fabric, or any combination of such fabrics, woven, in item 704.4010, TSUS, and dutiable at the rate of 25 percent ad valorem.

Your enclosures are being returned.

If we can provide any additional information or be of further assistance, please do not hesitate to call on us.

Sincerely,

Michael H. Lane
Assistant Commissioner
Commercial Operations

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 2704-4-003864

This protest was filed against your decision in the liquidation on September 14, 1984, of entry No. 427154-5 dated May 8, 1984, covering a shipment of plastic picnic sets manufactured in Hong Kong.

FACTS:

The picnic set involved consists of 29 plastic pieces. That portion comprising the carry case is actually two large bowls with a detachable strap which serves to carry the set as well as a bowl. The remaining 27 pieces consist of picnic serving pieces such as cups, bowls, forks, knives, spoons, plates and salt and pepper dispensers, etc.

This merchandise was classified as an entirety under the provision for luggage, whether or not fitted with bottle, dining, drinking, manicure, sewing, traveling, or similar sets, of other materials in item 706.62, Tariff Schedules of the United States (TSUS).

The protestant maintains that the individual articles comprising the set are classifiable separately under items 772.03 through 772.06, TSUS, as appropriate.

ISSUE:

Are the two bowls which act as a carrying case within the purview of the term "luggage" for tariff purposes?

NO

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

LAW AND ANALYSIS:

Schedule 7, Part 1, Subpart D, Headnote 2(a)(ii), TSUS, provides in pertinent part that "For the purposes of the tariff schedules — (a) the term '<u>luggage</u>' covers — (i) travel goods *** and like articles designed to contain clothing or other personal effects during travel."

To be considered luggage within the purview of the above-cited headnote, the carrying case itself must be primarily luggage. It is our observation that the "clam shell" combination of bowls does not constitute luggage for tariff purposes inasmuch as the bowls are more than a carry case for the other picnic articles. They are in fact bowls, the main function of which is to act as serving dishes.

In view of the foregoing, classification of the picnic set as luggage is not appropriate. It is our position that the components of the set are separately classifiable. The salt and pepper dispensers are provided for in item 772.03, TSUS, with duty at the rate of 4 percent ad valorem or entitled to free entry under the Generalized System of Preferences (GSP), if otherwise qualified. The plastic knives, forks, and spoons are classifiable under the provision for other articles chiefly used for preparing, serving or storing food or beverages, or food or beverage ingredients, of rubber or plastics in item 772.15, TSUS, and dutiable at the rate of 4 percent ad valorem or entitled to free entry under the GSP, if otherwise qualified. The remaining plastic articles are provided for under item 772.06, TSUS, with duty at the rate of 8 percent ad valorem or entitled to duty-free treatment under the GSP, if otherwise qualified.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

A11

HOLDING:

The protest should be allowed. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

New York, New York 10118

Dear Ms. Friedman:

This is in reply to your letter of October 8, 1985, concerning the country of origin of certain sweaters.

In your letter, you state fabric will be imported into Haiti from either the United States, Europe, or the Far East. In Haiti the fabric will be cut, sewn, and finished into completed sweaters. All the fabric needed for armholes and necks will be shipped in bulk and cut in Haiti.

Based on the above set of circumstances, the subject garments would be considered products of Haiti upon their importation into the United States and would be subject to any import restraints that may be applicable to products of Haiti. The garments would not be considered to be products of the countries where the fabrics were knit.

Sincerely,

Harvey B. Fox

APR 29 1986

REFER TO
CLA-2:CO:R:CV:G
077110 PR

077110

This ruling concerns the tariff classification of certain bookmarks.

FACTS:

The submitted sample is a bookmark that is approximately 1-7/8 inches wide by 7 inches long. One side of the bookmark contains a quotation from the Bible and what appears to be pressed flowers that are held in place by a clear plastic lamination. There is a small hole near the center top of the bookmark, through which a doubled string or cord has been passed. The end of that string consists of a two-inch long tassel. The tassel is formed by four-inch plied yarns that have been knotted into the end of the double cord.

ISSUE:

The issue presented by the subject merchandise is whether the bookmark, if in chief value of the textile tassel, is classifiable as an ornamented textile article for tariff purposes. In this regard, two determinations must be made in the affirmative for the tassel to cause the bookmark to be classified as an ornamented textile article-- (1) that the tassel is primarily decorative, and (2) that the tassel ornaments a textile fabric or an article of textile materials.

BI

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

LAW AND ANALYSIS:

Headnote 3, Schedule 3, Tariff Schedules of the United States (TSUS), lists the types of features that can constitute ornamentation for tariff purposes. The headnote contains the requirement that those features constitute ornamentation only when they ornament fabrics or other articles of textile materials.

In Blairmoor Knitwear Co. v. United States, 60 Cust. Ct. 388, C.D. 3396 (1968), it was held that term "ornamented," as defined in Headnote 3, includes only those features which primarily serve to adorn, embellish, decorate, or enhance. Where the functional purpose is paramount and the decorative effect only incidental, the feature does not create an ornamented article within the purview of Headnote 3.

In this regard, it appears that the knot forming the tassle prevents the fringed portion of the tassel from sliding into a closed book, thus allowing a reader to readily locate the bookmark. However, the fringe that extends outward from the knot presents a highly decorative appearance and serves little, if any, utilitarian function. Subsection (b) of Headnote 3 provides that fringe need not have a separate existence from the article on which it appears in order to constitute ornamentation.

B2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

011710

Since there is no authority to disregard the value of the textile tassel, or the fringe which is part of that tassel, the bookmark, which is stated to be in chief value of the tassel, is a textile article which is ornamented by the fringe. In this regard, it is noted that this office ruled on March 17, 1972, file MCB 418.44, 015851, that a similar article was ornamented for tariff purposes.

HOLDING:

The subject bookmark, which is stated to be in chief value of cotton, is properly classifiable under the provision for other ornamented articles of textile materials not specially provided for, of cotton, in item 386.04, TSUS, with duty at the 1986 rate of 25 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

This ruling concerns the validity of American selling price appraisements of certain footwear manufactured in Taiwan and Korea.

FACTS:

The footwear involved was classified in liquidation under the provision for other footwear which is over 50 percent by weight of rubber or plastics or over 50 percent by weight of fibers and rubber or plastics

B4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

with at least 10 percent by weight being rubber of plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics in item 700.60, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 20 percent ad valorem.

Schedule 7, Part 1, Subpart A, Headnote 3(b), TSUS, provides that "Subject to the provisions of section 336(f) of this Act, the merchandise in item 700.60 shall be subject to duty upon the basis of the American selling price as defined in section 402 or 402a of this Act, of like or similar articles manufactured or produced in the United States."

Pursuant to the above above-cited headnote, the imported footwear was found to be legally similar to certain domestically produced footwear. It should be noted that in response to a Freedom of Information Act request the protestant was provided information showing the American selling price appraisements at which liquidations were made covering the imported footwear. However, in most instances no information was then provided identifying the domestic prototypes.

Appended to this ruling is Attachment A which sets forth the "most similar" domestic prototype and the exact ASP applicable to each of the protestant's shoes for the dates on which these shoes were exported. This listing also covers stock numbers included on protest Nos. 2704-8-002572/8-004146/9-000652 filed by the same protestant.

Only about twenty five percent of the appraisements shown on the attachment are the same as those used at liquidation due in part to the use at liquidation of LaCrosse shoes as prototypes. Approximately 10 years ago Customs determined that LaCrosse did not "freely sell or offer" its shoes within the purview of section 402a(g), Tariff Act of 1930, as amended.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

BS

077114

It might be possible to establish the price which LaCrosse was "willing to receive" for their shoes, as that term was used in 402a(g), Tariff Act of 1930, as amended. However, Customs has always used a "freely offered" price in preference to a "willing to receive" price. Therefore, in all cases where a LaCrosse shoe was originally used as the prototype, we have substituted another similar shoe from Bata or Uniroyal, who did "freely offer." Since we always used the "equally similar" prototype which was the "closest in price" to the import, the change from the LaCrosse shoe to a Uniroyal or Bata shoe always results in a higher appraisement.

Other shoes have appraisements which were correct for shipments a few months earlier. It is probable that ASP listings kept at your port were somewhat behind. A large number of other appaisements remain a mystery as to the identity of the prototype that was intended by the import specialist. However, whether or not we know the reason for the difference between the liquidated appaisements and our appraisements, we will lose the "presumption of correctness" in court on all such appraisements, but we believe that our alternate appraisements should prevail even without that presumption.

An ASP has not been provided for protestant's stock numbers 56036, 56124 and 52202/11/12/13 because the 15 page typed protestant's list claims the liquidated value to be the correct appraisement.

The primary prototypes shown are the most similar, "freely offered" shoes made in the United States. Alternate prototypes were listed only if the primary prototype did not cover all possible sizes of the import. Since the protestant imported very standard, "mass market" shoes, there are one or more alternate, similar prototypes available for every stock number imported, but we have not listed them.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

ISSUE:

Whether the imported shoes are legally similar to the domestic prototypes listed on Attachment A for ASP purposes.

LAW AND ANALYSIS:

Analysis

Stock No. 56159, etc.
Protestant's Position

Stock Nos. 56159 and 56161 have been described by the protestant as youth's boat shoes with canvas uppers and crepe herringbone pattern molded soles. These shoes are of a handwrapped construction with a one-color molded sole, one foxing wrap and with a flat heel.

The Uniroyal Regatta which is the primary domestic prototype is said not to be similar to the imported youth's boat shoes because of the use of a wedge heel and an injection molded construction with a two color outsole.

The Bata Dockside which is the alternate domestic prototype is said not to be similar to the imported youth's boat shoes because it is an injection molded shoe manufactured in women's sizes.

The major argument made by the protestant here against a finding of similarity is that in terms of construction, a hand wrapped shoe cannot be compared with an injection molded shoe. A handwrapped shoe is made by a labor intensive process which results in a shoe of a higher quality construction.

The protestant points out that an adult shoe is not comparable to a child's shoe and that styling differentiates shoes in the eyes of a consumer, by making them different in appearance.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077114

B1

077119

Customs Position

The protestant's description of the domestically produced Uniroyal Keds Regatta as being injection molded and having a wedge heel is not accurate. This shoe is hand wrapped and does not have a wedge heel.

Although the domestically produced Bata Dockside is an injection molded shoe the average consumer cannot tell that it is not hand wrapped. It should be noted that while hand wrapping is probably superior in itself as a method, an injection molded bottom using a suitable high grade plastic can outperform a sloppy hand wrapped sneaker using a poor quality rubber.

We agree that an adult shoe is not comparable to a child's shoe. However, our comparison is correct because the Keds Regatta comes in youth's and child's sizes. Generally, we would not consider the styling differences here to be significant enough to preclude a finding of similarity. The impact of styling differences is difficult to assess in view of the varying tastes of the public. Also, the protestant has made a general statement that styling differences cause shoes to be dissimilar but fails to present detailed reasons why this is so for the particular shoes involved.

Stock Nos. 56181 and 56182
Protestant's Position

Stock Nos. 56181 and 56182 are described as child's [redacted] licensed copyright merchandising character shoes. All models are of lace to toe construction and include a licensed copyright character as a merchandising property.

The domestic prototype is the Uniroyal Keds tail lights LTT which is a reflector patch, youth safety shoe without a licensed copyright character.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B8

A copyrighted character shoe may not be compared to shoes not containing the character.

A consumer who wants a certain merchandising character item will not settle for a product without it.

The Customs Service must take cognizance of the business reality of character merchandising in our consumer economy. The use of such characters differentiates the products in which they are used from any other products which do not contain the characters. Furthermore, it is clear that buying decisions are greatly influenced by the presence or absence of a merchandising character, especially with regard to products for children.

Shoes containing the [redacted] character may not be compared to any shoes not containing this character. This is particularly true with regard to the domestic prototype with reflector patches. The reflector tape used with such footwear constitutes a distinctive difference in terms of appearance and safety from any without it. Such tape must be purchased from the U.S. manufacturer, adding significantly the cost of any footwear to which it is attached. The use of such reflector patches will differentiate the domestic footwear from any without reflector patches, including the merchandising character footwear imported by the protestant.

Customs Position

We do not agree with the protestant that a copyright character shoe may not be compared with shoes not containing that character. First, we are not at all certain that a child would reject the domestically produced reflector patch, youth safety shoe if the imported character shoe were not available and are even less certain that the child would reject the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B9

077114

imported character shoe if the domestic model were not available. It is also true that in the final analysis the parent rather than a young child would make the decision as to which shoe to purchase and parents are much less influenced by devotion to [redacted] than children.

Stock No. 56189
Protestant's Position

Stock Nos. 56189 and 56191 are children's shoes with a crepe, pillar molded sole.

The Bata Two Points Locut is the primary domestic prototype for stock Nos. 56189 and 56191 exported prior to August 1, 1975, and the Uniroyal Keds Jet King is the primary domestic prototype for these shoes exported between August 1, 1975, to March 1977. The alternate domestic prototype for these shoes exported between August 1, 1975, and August 1, 1976, is the Bata Two Points Locut.

The Bata Two Points is a basketball shoe with a slip lasted construction completely different from that of the imported shoes. In addition to this construction difference, the use to which the imported shoe may be put is different as the pillar sole of the imported footwear would preclude its use on a basketball floor. The pillar molded sole does not have the same qualities of adhesion as a shoe with a basketball type sole construction.

The domestic shoes and the imports are not adaptable to the same use and have different constructions. The differences in use and construction make them neither competitive nor commercially interchangeable. In addition, the imported footwear has patches attached which distinguishes it stylistically from the domestic footwear.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077119

B10

Customs Position

The protestant's description of the Bata Two Points as being of a slip lasted construction is not accurate. This style is of a hand wrapped vulcanized construction.

The overwhelming use of these shoes is by children as ordinary sneakers. The use of these shoes for basketball playing is confined principally to other than wood floors. The suction cup type soles provide additional adhesive qualities for the Two Points that are significant on a wood floor but are much less so on an outside surface such as cement and asphalt.

Stock No. 56479, etc.
Protestant's Position

Protestant's stock Nos. 56479, 56481, 56479 and 57481 are described as child's and women's boat shoes with canvas upper and crepe herringbone molded sole. The shoe is said to be of hand wrapped construction with a flat heel and one foxing wrap.

Stock Nos. 56479 and 56481 are both in child's sizes. The domestic prototype is the Uniroyal Regatta for child's 5 through women's 3. The Bata Skiff is the domestic prototype for stock Nos. 57479 and 57481 which are in women's sizes.

The Uniroyal Regatta has a wedge heel construction with multiple foxing strips. It was not manufactured in women's sizes.

The imported footwear is not competitive or commercially interchangeable with the domestic prototype. The differences in construction make them significantly dissimilar.

Customs Position

As stated previously the protestant's description of the Uniroyal Regatta is not accurate. This shoe is hand wrapped and does not have a wedge heel. However, as protestant states this shoe was not produced in women's sizes. This is why we have appraised the women's sizes of their

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077114

B11

imports by using the Bata Skiff as the domestic prototype, not the Uniroyal Regatta.

The claim by the protestant that the imported footwear is not competitive or commercially interchangeable with the domestic prototypes has not been substantiated. The assertion that the Regatta and stock Nos. 56479 and 56481 are so different in construction as to render them dissimilar fails because the imported shoes and the Regatta are both of a hand wrapped construction.

Stock No. 56882, etc.
Protestant's Position

Stock Nos. 56882, 56883, 56884, 56885, 67882, 67883, 67884, 67885, 96882, 96883, 96884 and 96885 may be described as youth's, boy's and men's low cut gym shoes. These are gym oxfords with a molded rubber sole and are of a hand wrapped construction. They have a 13 ounce canvas upper and a rubber sole with an NBS abrasion of 35.

The Bata Two Points Locut is the primary domestic prototype for those shoes exported prior to August 1, 1975, and the Uniroyal Ked Jet King is the primary domestic prototype for these shoes exported from August 1, 1975, to March 1, 1977. The alternate domestic prototype for these shoes exported between August 1, 1975, and August 1, 1976, is the Bata Two Points Locut.

The Bata Two Points is a basketball shoe. The sole has a National Bureau of Standards (NBS) abrasion rating of 70 and the insole is well cushioned. It has a 16 ounce canvas upper. As a real basketball shoe, it is sold in stores and departments which specialize in sporting goods. The imported shoe on the other hand, is a type of general shoe merchandise not sold as a specialized basketball shoe even by the protestant. The protestant markets basketball shoes in its sporting goods department rather than in its shoe department.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B/2

077114

The domestically produced Bata Two Point is different from the import in construction, use, quality or competitiveness. The differences in the type of store in which sold, as well as the constructions makes them neither competitive nor commercially interchangeable. As stated before, difference in the type of retail outlet can make footwear non-competitive.

Customs Position

It is our position that the channel of distribution for the import and the domestic prototype is not different. We would consider shoes such as the domestic prototype which are sold in stores and departments which specialize in sporting goods to be essentially in the same channel of commerce as those imports sold in the sporting goods department of the protestant's stores. Also it has not been established that the Bata Two Points was in fact sold as protestant claims.

The Bata Two Points like the imports is of a hand wrapped construction. The protestant has not submitted any evidence which would persuade us that there are any differences in construction which would be significant enough to render the shoes dissimilar.

Stock No. 57259, etc.
Protestant's Position

Stock Nos. 57259 and 57261 may be described as women's canvas upper CVO with a crepe herringbone pattern (deck type) molded sole.

The domestic prototype for these stock numbers is the Bata Skiff. The protestant has not presented any arguments against using the Bata Skiff as the domestic prototype.

Stock No. 57359, etc.
Protestant's Position

Stock Nos. 57359, 57363, 57364, 57368, 57379, 57383 and 57384 are described as either a women's one eyelet tie CVO with calendared sole, or a women's side gore slip-on CVO with calendared sole.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B13

The Bata 2-ring or promenade which is the primary domestic prototype is a women's two eyelet tie with a rope espadrille wrap. It is significantly dissimilar in appearance as well as appointments and in quality of construction.

The domestic prototype is not comparable to the imported models. The imported footwear is specifically directed toward a certain narrow market composed of elderly women. In addition the imported shoes are significantly different in materials and quality of construction. The sole of the imported shoes is clay loaded rubber as opposed to crepe on the domestic model. The uppers on the imported footwear used starch combining which made them very stiff when new and led to early adhesion failures. The combining of the domestic prototype shows a much higher quality as shown by the suppleness of the shoes. These differences in materials, construction, quality and styling make the imported footwear not comparable to the prototype.

Customs Position

The protestant has not submitted any evidence to substantiate its claim that the imported footwear is specifically directed to a narrow market composed of elderly women.

The difference cited by the protestant with respect to sole materials is not so significant as to render the import and the domestic prototype dissimilar. Also, it is questionable whether the average consumer could recognize the difference in sole materials.

The statement that the imports are inferior to the domestic prototype because of adhesion failures is not supported by any evidence.

Stock No. 67851, etc.
Protestant's Position

Stock Nos. 67851 and 96851 may be described as men's and boy's sports shoes with a licensed merchandising signature by Ken Rosewall.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077114

B14

027114

The Bata Court Tops is the primary domestic prototype. This shoe is a basketball shoe with a sole dissimilar to the sports shoe sole of the imported footwear. The Court Tops does not carry a licensed merchandising signature. The sole of the Court Tops has an NBS abrasion of 90.

The Bata Court Tops is not comparable to the imported shoes due to the licensed merchandising signature as well as the construction and design for which they may be used. A licensed merchandising property used with a product, imparts to the product with which it is used a significant value as well as differentiating it from all other goods.

The imported footwear also differs in terms of construction and use from the domestic prototype. These differences in constructions and use make the prototype neither competitive nor commercially interchangeable.

Customs Position

The protestant states that the Bata Court Tops is a basketball shoe. However, this shoe appears in the Bata in stock catalog (1974) on page 13 which shows tennis shoes. Also, the heading on page 13 reads "tennis shoes."

We do not agree that an imported shoe with a licensed merchandising signature may not be compared with shoes not possessing that signature due to the "significant value of the signature." The "value of a signature" is difficult to assess inasmuch as it involves subjective determinations on the part of the consumers. Again, we are not at all certain that a person would reject the domestically produced shoe without the signature, if the imported signature shoe were not available. Also, we are not certain that a person would reject the imported signature shoe if the domestic prototype without the signature were not available.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

APPROVALS

Stock No. 56191 covered by CE 220757 dated 4-29-75, if actually liquidated at $5.05 less 2 percent, should be revalued at $4.40 less 2 percent in sizes 11 to 2 and $4.20 less 2 percent in sizes 8-1/2 to 10-1/2.

Stock Nos. 56539, 56541, and 56542 covered by CE 210672 dated 3-16-75 and CE 112246 dated 7-30-73, if actually liquidated at $2.35 less 2 percent should be revalued at $2.25 less 2 percent in all sizes.

Stock No. 96851 covered by CE 151933 dated 11-8-73, if actually liquidated at $5.75 less 2 percent and/or if actually liquidated at $6.75 net on CE 223020 dated 5-28-74, should be revalued at $5.30 less 2 percent on CE 151933 (assuming date of export is after 10-9-73) and at $6.25 less 2 percent on men's sizes 6-1/2 to 13 on CE 223020.

LAW

For the purposes of determining similarity in American selling price cases, four tests have been used as guides: (1) similarity of material, (2) commercial interchangeability, (3) adaptability to the same use, and (4) competitive character.

In 1966 certain guidelines to be used in appraising footwear were issued by the Commissioner of Customs. Those guidelines provide in part that "In carrying out that function such officers shall use all reasonable ways and means to select the product manufactured in the United States which in their opinion is like or most similar to the import in physical characteristics, such as appearance, durability quality, construction, workmenship and finish."

Based on the tests for determining similarity and the guidelines set forth above it is our position that the domestic prototypes selected are legally similar to the imports for the following reasons:

C2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077119

(1) The imported shoes and the selected domestic prototypes are composed of essentially the same material and are basically similar in construction and design. The differences cited earlier by the protestant are minor and do not preclude a finding of similarity. See Albert F. Maurer Co., v. United States, 51 CCPA 114, C.A.D. 845 (1964).

(2) The imported shoes and the selected domestic prototypes are adaptable to the same uses; and

(3) With respect to commercial interchangeability and competitiveness, we are not convinced that the domestic prototypes are sold in different retail outlets than the imported footwear. In the case of A. Zerkowitz Co. v. United States, 55 Cust. Ct. 643, Reap. Dec. 11095 (1965) (reversed on other grounds), 58 CCPA 60, C.A.D. 1005 (1970), the court stated that "it is easy to see that if an import was sold only in religious supply houses, and the alleged counterpart, only through sporting goods establishments, skepticism as to competitiveness would be warranted. When the outlets differ, however, primarily in the degree to which they cut prices, or claim they do, the difference in outlet is simply a function of the difference in price, and price is the life of competition. The Neiman Marcuses, Brooks Brothers, or Abercrombie & Fitches of this world would indeed be surprised to be told they received no competition from cheaper discount houses. No customer is so wealthy he does not look for a bargain once in a while. The finest stores (not those named above) run bargain basements and occasionally they announce sales, at which times, if rumor is correct, the high-quality merchandise may be secreted in the warehouses and poorer stuff finds its way to the counters. Occasionally, too, high-price stores dispose of slow-moving merchandise to lower-price outlets. Not only is it impossible to find that imports never competed with the alleged counterparts on the shelves of the same stores, but to the extent the competition was at a distance of around the corner, or from the first floor to basement, it is impossible to see the relevance of the fact."

HOLDING:

The protest should be denied, except to the extent that reappraisement as indicated for certain entries specified above results in a partial allowance. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

077155 JAS

077155

District Director of Customs
Patrick V. McNamara Bldg.
477 Michigan Avenue
Detroit, Michigan 48226-25668

Dear Sir:

This is our decision on Application for Further Review of Protest No. 3801-5-001357, dated February 25, 1985. At issue are consumption entries 586213, 389220 and 389934, dated respectively, August 18, October 19, and December 27, 1983, and liquidated January 28, 1985. The merchandise is certain workholding devices from West Germany.

FACTS:

A brochure submitted by protestant depicts a number of specially designed positioning and clamping work holders referred to as Self Adapting Fixture Elements (SAFE). While neither protestant nor your office has specified which of the various models in the brochure are the subject of this protest, models 87608 and 87614 are highlighted on pp. 5, 27 and 61, and are presumed to be the subject of this protest. The appropriate national import specialist in New York concurs. These articles are advertised as devices which support and clamp workpieces in machine tool applications. Model 87606 is a positioning, seating, and clamping element using a precision hold down screw and tranverse adjusting slide for adjustment of the distance between two drill holes. Model 87614 is a vertically adjustable element that supports and clamps workpieces through a hole with a precision hold down screw. Both models are advertised for use on "all kinds of machining jobs" with both conventional and numerically controlled machine tools.

C4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The subject entries were liquidated under the provision for other accessories used principally with machine tools, in item 674.56, Tariff Schedules of the United States (TSUS). You relied on a Protest Review Decision dated May 15, 1984 (073943), as amended by a decision dated July 25, 1984 (074413). Protestant challenges these decisions, however, and maintains that the superior heading to the involved item numbers clearly indicates that work holders are to be classified as parts of machine tools and that the tariff language makes no mention of the fact that to be so classifiable the work holder must be used on only one type of machine tool.

ISSUE:

Are the subject work holders "parts" of or "accessories" used principally with machine tools?

LAW AND ANALYSIS:

In your covering memorandum of June 11, 1985, (PRO-2-06-CV:CT:AWG), you state that C.I.E. 26/66, which essentially supports protestant's position, may be in conflict with our May 15 and July 25, 1984, decisions which formed the basis for your liquidation of the protested entries. C.I.E. 26/66, dated January 14, 1966, has since that date governed the tariff treatment of machine tool work holders. This decision concerned certain dividing heads mounted on the bed of a milling machine, and apparently used only with this type of machine tool. The decision construed the superior heading to items 674.50 through and including 674.56, TSUS, "Work and tool holders and other parts of, and accessories used principally with machine tools," and concluded that work holders are considered parts per se, rather than accessories. This conclusion was

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077155

based on the placement of the comma in the quoted superior heading. Pages 480 and 481 of the Tariff Classifiction Study are cited to support the conclusion reached in C.I.E. 26/66.

While we agree that the dividing heads in C.I.E. 26/66 were correctly held to be parts, classifiable in item 674.53, we feel the proper reasoning is because they were used only with a particular type of machine tool, i.e., a milling machine. Normally, statutory construction and punctuation are to be construed in their ordinary grammatical sense unless such interpretation would result in a conclusion contrary to the manifest intent of Congress. L. R. Markell et al. v. United States, 16 Ct. Cust. Appls. 518, T.D. 43239 (1929), and related cases. The Explanatory Notes on proposed Schedule 6, contained in the Tariff Classification Study of November 15, 1960, vol. 2, published as C.I.E. 1/64, are a valid source of legislative history on the involved provisions. A careful reading of these materials reveals the following. The last sentence of paragraph 2 on page 480 relates item 674.53, the parts provision, to the provisions in paragraph 372, Tariff Act of 1930, as amended. Paragraph 3, at the bottom of page 480 and continuing on page 481, in discussing accessories, begins "There are a number of jigs, fixtures, and other subsidiary devices or accessories which are principally used in connection with machine tools. Such devices, although principally used with machine tools, are not parts of any particular tool."

It is our position that this language strongly implies that if chief use with any one particular machine tool, or with any of the various models or types of that machine tool can be established, a device is to be classified as a part rather than an accessory assuming, however, that it actually qualifies as a part in a tariff sense. For example, a work holder shown to be chiefly used with a twist drill, radial arm drill and other types of drills, would be classifiable as a part and not as an accessory.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077155

077155

The decision of May 15, 1984, as amended by the decision of July 25, 1984, essentially held that T-slotted angle plates which were work holders used with horizontal boring mills and radial drills, adjustable angle plates similarly used, T-slotted box tables used with radial drills, boring mills and other floor type machine tools, and T-slotted cube blocks, suitable for many machining purposes, were classifiable as other machine tool accessories in item 674.56, TSUS. These decisions are consistent with our interpretation of the quoted language in the Tariff Classification Study. For these reasons, the decision in C.I.E. 26/66 is hereby limited to the merchandise therein considered.

HOLDING:

Self Adapting Fixture Elements, the subject of this protest, are classifiable under the provision for other accessories used principally with machine tools, in item 674.56, TSUS. The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action, to satisfy the notice requirements of section 174.30(a), Customs Regulations.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON, D.C. 20229

MAY 14 1986

REFER TO

CLA-2 CO:R:CV:G
077197 JGB

077197

The Honorable
David de Pury
Minister
Embassy of Switzerland
2900 Cathedral Avenue, NW.
Washington, D.C. 20008

Dear Mr. de Pury:

Your reference: 5 32.21(5)
5 32.125.250-RA/bt

Your letter of October 23, 1985, with accompanying memorandum prepared by the Swiss Embroidery Association, St. Gall, Switzerland, written on that Association's behalf, requests a ruling on the country of origin of twenty-three styles or types of embroidery produced by members of the association for export to the United States. Samples of the base fabric and the end product in each style or type were provided, showing the "before and after" stages of the embroidery operation.

The samples show that woven, knit, net, and pile fabrics are imported into Switzerland where they are embroidered and finished. We understand the base fabrics to be from Hong Kong or another column one country in the Far East. The textile products consist of various fabrics (embroidered fabrics, ornamented nets, and burnt-out laces), sample numbers 1 through 16, and of manufactured articles (motifs, curtains, embroidered doilies, and embroidered handkerchiefs), sample numbers 17 through 23.

Because these samples consist of materials produced in more than one foreign country, the country of origin for Customs purposes is determined by our regulations, 19 CFR 12.130. These regulations provide the standards for determining the country of origin by requiring that the country of origin for a textile or textile product is that foreign country where it last underwent a substantial transformation. A substantial transformation is said to occur when the textile or textile product has been transformed by means of substantial manufacturing or processing operations into a new and different article of commerce. 19 CFR 12.130(b).

C8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The issue is whether the embroidered products are a product of the country where the base fabric is made (country A) or of Switzerland where the embroidery work is done (country B).

The regulations, §12.130(d)(1), present three tests or criteria to determine whether a new and different article of commerce has been created by a manufacturing process. To create a new and different article, there must be a change in: (1) Commercial designation or identity; (2) Fundamental character, or (3) Commercial use. Satisfying one of these criteria is usually enough to meet the "new and different article" standard.

Our examination of the samples shows that all but samples 5 and 12 meet each of these tests. Samples 5 and 12 will be discussed later and are not included in the discussion that follows immediately. The commercial identities of plain woven fabrics and nets have been transformed into the new identities of embroidered curtain fabrics, burnt-out laces, embroidered trimmings, embroidered curtains, embroidered doilies, and embroidered handkerchiefs. All of these items have a recognized identity within the textile trade which is separate and distinct from the base fabric. Second, the fundamental character has been changed by the substantial manufacturing or processing operation in country B. The base materials are neither interchangeable with the finished product nor, in most cases, even similar in appearance. This change is especially apparent with those products which have the original base fabric removed prior to finishing (for example: style 3, the allover cut-out embroidery guipure lace "chemical" embroidery in a blossom design; style 4, another guipure lace in a teardrop pattern; style 16, another guipure lace edging in a flower design, and style 19, a handkerchief with substantial lace edging.)

The third criterion, change in commercial use, is apparent by a casual examination of the samples. For example, in the case of sample 1, an allover chenille embroidery with cut-out base fabric, the base fabric can be used for a variety of textile applications in apparel, furnishing and manufactured articles. The finished cut-out embroidered and chenille-yarn ornamented fabric is dedicated to use in the ladies' dress trade. Sample 6, with a plain base fabric that would be used in apparel or furnishings has been changed to a galloon with eyelets, primarily suitable for use with curtains. Sample 9, a base tulle, is commercially used to manufacture curtains and bridal products among other things. The finished motif is

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

dedicated to use as an insert in ladies' apparel. Sample 13, an allover multicolor embroidery used in the ladies' dress trade started with a base fabric that could be used for wearing apparel, furnishings or other manufactured products. Sample 16, a light semi-transparent base fabric is embroidered with a lace trim and then washed in a chemical which dissolves the base fabric altogether, leaving only the trim.

The change in commercial use is even more pronounced in the manufactured finished articles. In the case of sample 20, the plain base woven fabric is used in a variety of ways within the furnishings and apparel trade; the finished product is a handkerchief. This finished handkerchief has guipure lace trim around all edges and predominantly on the corners, extending toward the center 3-4 inches in the samples provided. The finished product has a changed identity and use as a decorative or ornamental handkerchief. The same process applies to sample 20; however, this sample is embroidered in colors so that the areas most covered by the embroidery are the corners from which the embroidery work extends from 3-4 inches toward the center of the handkerchief. Again, a plain base fabric is woven in country A and imported in the piece to country B where it is manufactured into a finished article having a changed identity and use that is different from the base fabric.

In the case of samples 21 and 22, the base fabric, an imported tulle net and woven fabric can be used in apparel, furnishings or other manufactured articles. The completed article has a completely different character, identity, and use that is unrecognizable compared to the base fabric.

The country of origin criteria provided by the regulations, §12.130(d)(2), to determine "substantial manufacturing or processing operations," are also met by the samples provided, with the exception of samples 5 and 12.

The machine embroidery trade occupies a unique and easily definable segment of the textile trade. Customs has elected to analyze the manufacturing processes of this trade based on independent reasearch in the domestic and European trade, as well on our own knowledge gained from authoritative trade publications. Therefore, we know the processes used to make woven base fabrics and tulle in country A, as well as the time, complexity, degree of skill and technology and the value added. Moreover, we know from firsthand examination the characteristics of the machines used to make the embroidery products in country B, because the same highly specialized machines are used by our domestic industry with the same types of base fabrics to produce substantially similar end products.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C10

In the matter at hand, the base fabrics, products of country A, are in samples 1,3,4,6,7,10,13,15,16,18,19,20,22, and 23 relatively ordinary machine woven fabrics. Samples 2, 9, and 21 are machine-made tulle, a net. Sample 2 also includes a vinyl coated woven fabric, while the entire base fabric for sample 8 is vinyl coated. The base fabric for sample 14 is a pile fabric, while sample 17's base woven fabric is designed to disintegrate when the motif is ironed on another piece of cloth.

For the woven base fabrics and the warp knits, the manufacturing is done with great speed in highly automated looms or warp knitting machines. In the case of the tulle, this machine-made net is manufactured in a highly automated process. The vinyl-coated fabrics and pile fabric are products of special processes, both of which start with a woven fabric made in an automated process followed by another automated process, coating with vinyl on one side in the first instance and making the pile by cutting in the second example. The disintegrating fabric is obviously a machine-woven material; however, the man-made yarn has special properties of being destroyed by heat.

The processes performed in country B, the country of export, are performed mainly by the Schiffli machine, a machine of Swiss origination, the Cornelly machine, and possibly a Raschel lace-making machine with Jacquard applications. In each sample the capital investment in machinery when calculated per yard of fabric produced is overwhelmingly in favor of country B. Simply stated, the raw materials that go into the base fabric are cheap and the method of manufacture of the base fabric is very fast, creating huge volumes of fabric. The processes used on the finished product in country B are very slow, highly complex, and because of the relatively slow speed of production, both labor and capital intensive. The value added in country B is greater than 10:1.

Our data show that because of the time and labor involved in the country B operations, each additional square inch of embroidery by these machines costs about the same as the last, with very little reduction in cost due to volume. Our National Import Specialist for this merchandise noted that the value added by the allover multicolor embroidery of sample 13 makes the value of the base fabric negligible by comparison. In considering the value of something as intricate as the burnt-out laces of sample 16, the value of the base fabric is probably no more than one percent of the value of the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

needlework necessary to create these designs. While the embroidery present on the burnt-out lace sample may be enough to qualify as substantial manufacturing, the additional process of chemical bath involving substantial additions of time and labor gives additional support to this position.

Sample 5 is described as an embroidery trimmed with guipure lace "chemical" embroidery edging. The burnt-out portion measures 1-1/4 inch from the edge at its extreme, while the simple embroidery portion measures about 4-1/2 inches from the edge, including the burnt-out portion. Sample 12 is an eyelet embroidery measuring 2-1/2 inches from the edge. Base fabric in both samples appears to be made on a warp knitting machine.

It is unclear to us what use is to be made of the finished embroidery trim, because it is not disclosed what article of textile material the sample is cut from. Is the embroidered edging destined for use as intimate apparel, underwear, or curtains, for example? Without more precise information it is not possible to determine whether these samples represent a new and different article of commerce. As stated above, most samples are readily identifiable as representing well-known segments of the embroidery trade. Some are finished articles, such as doilies or handkerchiefs, or galloons that show us the height but not the width. However, samples 5 and 12 are a mere edging on a piece of fabric of unknown dimensions with undetermined identity, character and use. With these two exceptions, the samples speak for themselves, but for samples 5 and 12, it cannot be determined that the required change has occurred when we do not know what the finished product is. We should note, moreover, that in the case of curtain fabric, hemming or working of the edge is not enough to create a substantial transformation. See T.D. 85-126, our change of practice notice for this merchandise. Also, adding an embroidered border to fabrics in the piece is not usually enough to change the country of origin. We distinguish samples 5 and 12 from the others presented by noting that the latter samples are finished articles with recognizable dimensions or unfinished articles with repeating allover patterns. The former samples, by contrast, display only a border treatment: a combination of embroidery trimming with guipure burnt-out chemical embroidery in the case of sample 5 and a combination of eyelet embroidery and Schiffli embroidery in the case of sample 12.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C12

The new country of origin rules make no specific mention of embroidery and burnt-out lace operations. Section 12.130(e) list those manufacturing or processing operations that usually will qualify and those that usually will not qualify for substantial manufacturing or processing operations. If any of these listed operations were involved with the production the samples at hand, they would be considered as a means of applying the regulation; however, the absence of a discussion of the embroidery and burnt-out lace processes in our regulations does not mean that these processes would not meet new country of origin criteria. The criteria for country of origin are contained in §12.130(d). Section 12.130(e) merely explains the preceding paragraph by listing the usual qualifying and non-qualifying operations.

Having met the criteria of §12.130(d), the samples provided, with the exceptions of samples 5 and 12, should be declared substantially transformed in country B as products thereof. Products where the base material is present in the shipment should be covered by a multiple country declaration. (See §12.130(f)(2).) In those cases, such as sample 16, where the base fabric has ceased to exist after chemical treatment, but before exportation, a single country declaration should be presented. (See §12.130(f)(1).) As indicated above, we lack sufficient information to determine whether any test under §12.130(d)(1) has been met for samples 5 and 12. If no test in §12.130(d)(1) has been met, it is inconsequential that the embroidered borders of samples 5 and 12 probably do meet the substantial manufacturing criteria of §12.130(d)(2).

Sincerely,

Harvey B. Fox

077275

This ruling concerns the country of origin of certain cotton piece goods.

ISSUE:

The issue presented by the subject inquiry is whether certain cotton fabric, woven in one country and processed in a second country, becomes a product of the second country for textile restraint purposes.

FACTS:

On December 6, 1984, a meeting was held between various officials in the Customs Service, a member of the British Embassy, and the representative of the importer involved with this request. At that time, the submission on behalf of the importer was presented to Customs. Unfortunately, that submission was inadvertantly misplaced and on March 1, 1985, the importer's representative supplied a copy to Customs. In April the importer's representative was advised by the Customs Service that, on the basis of the information before us, there was a likelihood Customs would rule adverse to the position of the importer. The importer's representative requested additional time to make a new submission, which was forwarded to the Customs Service on June 13, 1985. The importer's representative was advised within 2 months of the receipt of that submission that the information contained therein was insufficient to overcome the questions raised by the original submission.

C14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The importer's representative again asked for further time and on November 6, 1985, forwarded to Customs a new submission which addressed the concerns raised by Customs concerning the original submission. The latest submission by the importer's representative was sent to our National Import Specialist in New York for a report on the technical aspects concerning that submission. The report from our NIS was received on February 1, 1986.

It is stated that loomstate (gray) fabrics will be purchased in various places around the world, including China, Thailand, Colombia, and Germany. The majority of the fabrics will be 100 percent cotton. These fabrics include plain weaves, brushed cottons, satins, sateens, corduroys, and twills. The cotton fabrics in the gray will contain many impurities, including waxes, pectins, proteins, metal salts, cotton seeds, and starch sizing. The fabrics will be sent to the United Kingdom or Holland where the fabric will be subjected to 10 different processes. These processes are as follows:

(1) Sewing together of the gray fabric into lengths of 5,000 meters;

(2) Cropping, which is a removal of loose hanging threads and surface pile by a machine that contains four cylinder cutting knives rotating against fixed blades;

(3) Scouring, which consists of impregnating the fabric with a solution of caustic soda and detergent, steaming the fabric for seven minutes at 100 degrees centigrade, and then washing the fabric;

(4) Bleaching, which is accomplished by impregnating the fabric with an alkaline hydrogen peroxide solution and then steaming and washing the fabric;

(5) Stentering, which consists of passing the fabric through a hot air drying tunnel;

(6) Dyeing, which is the application of reactive dyestuffs and alkali to the fabric in a "cold-pad-batch reactive system";

D1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

071275

(7) Printing, which is done by a rotary screen process in which seamless metal mesh screens engraved with a design enable dye to be applied selectively to the fabric;

(8) Baking and steaming, which fix the dyestuffs to the cotton at temperatures of 100 degrees centigrade or higher;

(9) Stentering for a second time;

(10) Batching and inspection.

LAW AND ANALYSIS:

Section 12.130(b), Customs Regulations (19 CFR 12.130(b)), provides that a textile or textile product which is processed in more than one foreign territory or country is a product of that territory or country where it last underwent a substantial transformation — where it was last transformed by means of substantial manufacturing or processing operations into a new and different article of commerce. Subsection (e)(1)(i) of section 12.130 states that fabric will usually be a product of a country other than where it was formed if, in the second country, it was dyed, printed, and subjected to two or more of the following finishing operations: bleaching, shrinking, fulling, napping, decating, permanent stiffening, weighting, permanent embossing, or moireing.

The importer believes that the processing done in the United Kingdom or Holland clearly falls within this example. There appears to be no question that the fabric is dyed, printed, and bleached. In the June 13, 1985, submission, the importer's representative advised that prior to the second stentering operation on the fabric, a resin is applied by padding (Helmond process) and is cured at a high temperature (presumably during the stentering process). While it is contended that this is a shrinking process, our National Import Specialist reports that it does not shrink the fabric, but, rather, prevents further shrinkage. However, the National

D2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077275

Import Specialist further advises that the stentering process, which the subject fabric is put through twice, is a recognized shrinking operation in the fabric finishing industry. In this regard, while not stated, we assume that some shrinkage does take place during the second stentering operation while the resin is being set.

Accordingly, the operations described above apparently are in conformity with the example set out in section 12.130(e)(1)(i). In view of this, and considering (1) all the processing which the fabric in question is subjected to and (2) the change in the fabric as a result of that processing, it appears that the first 9 enumerated steps in the processing plus the addition of the plastic resin are sufficient to constitute a substantial transformation of the gray fabric.

HOLDING:

In view of the discussion above, gray cotton fabric which undergoes the described processing in a country other than where the fabric was formed will be considered for textile restraint purposes to be a product of the second country, in this case, either the United Kingdom or Holland.

Mr. G. W. Holden
Albright and Wilson, Inc.
P.O. Box 26229
Richmond, Virginia 23260-6229

Dear Mr. Holden:

Your letter of November 1, 1985, concerns the tariff classification of Tris (2-butoxyethyl) phosphate. You note that Customs classifies it in item 428.47, TSUS, the provision for other polyhydric alcohols, and esters, ethers, and ether-esters and substituted derivatives thereof. It is your opinion that there are three other tariff provisions which provide better definitions of the product. You suggest classification as an ester of monohydric alcohol in item 428.72, or as an ether of monohydric alcohol in item 428.96, or as surface active agent in item 465.95, TSUS.

In your opinion the product is an ester of phosphoric acid with a major application as a surface active agent. It is used, you contend, in acrylic emulsion floor polish as a foam control agent, to improve substrate wetting and mutual compatibility of the polish components.

Tris (2-butoxyethyl) phosphate contains several functional groups, one of which is an ether-ester of a polyhydric alcohol. Headnote 1, Part 2(D), Schedule 4, TSUS, states that organic compounds in the subpart are arranged according to functional group. Any organic compound which is described in more than one functional group is classifiable in the first group in which it is described. Therefore since ether-esters of polyhydric alcohols, item 428.47, appears before esters of monohydric alcohols, item 428.72, and ethers of monohydric alcohols, item 428.96, it must be classified in item 428.47, TSUS.

As to the claim that the chemical is classifiable as a surface active agent in item 465.95, TSUS, it is noted that reference works indicate it is principally used as a plasticizer, and that its use in floor wax is as a leveler and not as a surfactant.

Accordingly, Tris (2-butoxyethyl) phosphate's classification in item 428.47 is affirmed.

Sincerely,

Arthur P. Schiffler
Chief, General
Classification Branch

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice No. 82/85 Concerning the Tariff Classification of Rope Chain Jewelery Made in Israel (Your Memorandum of November 7, 1985, CLA-2-07:S:COM:N3G:344-25[illegible])

The subject internal advice request was initiated by counsel in a brief dated August 30, 1985.

This merchandise was the subject of our letter of June 18, 1985, file No. 076357, in which we declined to consider the dutiable status of the merchandise but rather extended the importer the opportunity to later substantiate the claim that the merchandise comprises bracelets in a subsequently filed protest. We have not been made aware of any subsequently filed evidence. In a conference conducted on November 21, 1985, it was again noted in discussions with counsel the type of information which we would require to establish that the merchandise constituted bracelets.

Counsel rather, in effect, seeks to dissociate considerations relative to the status of the merchandise as bracelets from a practice issue on which the claim for classification as bracelets is currently predicated. Accordingly, we still have been supplied with no advertising literature, proof of sales, or any other information establishing that the merchandise constitutes bracelets. The importation experience of this single importer which is claimed to date from 1981 is not, in our opinion, shown to be of sufficient extent or duration to constitute a practice.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D5

With respect to the possibility that a practice finding here also is precluded because issues of fact, rather than issues of law, are involved, counsel has referred to previous discussions with various Customs personnel indicating that the Customs Service was well aware of the nature of the merchandise. Therefore, it is suggested that a change in dutiable status evidenced a change in a legal conclusion as to classification. Our previous conclusion makes it unnecessary to address this aspect of this matter. We do note, however, that corrections in dutiable status by line officers based on factual determinations merely involve the performance of required duties and do not constitute rulings by the Secretary of the Treasury changing dutiable status as a result of new interpretations under the law within the contemplation of section 315(d) of the Tariff Act of 1930, as amended. Hensel, Bruckmann & Lorbacher, Inc. v. United States, 49 CCPA 15, C.A.D. 787 (1962). Counsel's attention is also directed to United States v. Citroen, 223 U.S. 407 (1912).

For the foregoing reasons, it is our conclusion that there exists no established and uniform tariff classification practice which would entitle the instant IA applicant to classification of the subject merchandise under the provision for bracelets in item 740.14, TSUS, and the Generalized System of Preferences free rate authorized under that provision. A copy of this decision may be made available to the IA applicant.

Mr. Frank Brennan
Consultant
Mudge, Rose, Guthrie, Alexander & Ferdon
2121 K Street, N.W.
Washington, D.C. 20037

Dear Mr. Brennan:

In your letters dated November 13, and December 5, 1985, on behalf of Norman Industries, Inc. of Lake Elsinore, you inquired as to the dutiable status of a novelty animal backpack of man-made textile fiber materials produced in Korea. A sample was submitted for examination.

The sample is a child's backpack which resembles a Panda bear. It measures approximately 18 inches high. The head, arms and legs are fully stuffed but the body cavity is devoid of filling. Standard backpack harness straps and fasteners are permanently sewn to the ends of the arms and legs. These fasteners are identical copies of those patented by a United States firm under the names "Ladderlock" buckle and "Side Release Buckle." These items are specifically manufactured for use in the backpack industry. The sample has a back compartment equal to the full volume of the torso and measures approximately 14 inches deep by 10 inches wide. The interior is rayon lined and there is a sewn-in label which has the printed legend "I'm one of the authentic Bear Buddies." The label has a space for an address and is completed with the phrase, "If you find me, please call my home." The compartment is closed by means of a 16 inch long elliptically shaped nylon coil zipper.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), Tariff Schedules of the United States (TSUS), provides in pertinent part that "For the purposes of the tariff schedules - (a) the term 'luggage' covers (i) travel goods such as *** knapsacks, *** and like articles designed to contain clothing or other personal effects during travel."

Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, provides that "For the purposes of the tariff schedules, a 'toy' is any article chiefly used for the amusement of children or adults."

General Interpretative Rule 10(e)(i), TSUS, provides that "a tariff classification controlled by use (other than actual use) is to be determined in accordance with the use in United States at, or immediately prior to, the date of importation, of articles of that class or kind to which the imported articles belong, and the controlling use is the chief use, i.e., the use which exceeds all other uses if any combined."

D1

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

The issue presented is whether the sample animal backpack is chiefly used for the amusement of children or adults. If so used, it would be considered a toy for tariff purposes. If not so chiefly used, it would be considered luggage for tariff purposes.

In a recent decision this office had occasion to rule as to the dutiable status of a Koala "candy bear" which was in chief value of man-made textile materials and measured approximately 12 inches in height. The head, arms and legs of the bear were stuffed but the body cavity was empty. The bear was dressed in overalls which formed the bottom half of the torso with plush fabric forming the top half. The hollow body cavity of the bear formed an interior compartment while a zipper closure across the front of the bear secured the lined compartment and a smaller pouch therein. Adjustable textile tape harness straps were attached to the rear of the overalls at the seam and at the back of the stuffed head to form armholes.

In reaching the conclusion that the "candy bear" is a toy for tariff purposes, this office took the position that the utilitarian aspect of the merchandise was incidental to its play value for the following reasons:

(1) The "candy bear" is so small as to be confined to use by 2 to 5 year old children,

(2) the amount of storage space is minimal;

(3) the "candy bear" is in fact a plaything and can provide frivolous amusement to the users. See United States v. Topps Chewing Gum, Inc., 58 CCPA 157, C.A.D. 1022 (1971). Wilson's Customs Clearance, Inc. v. United States, 59 Cust. Ct. 36, C.D. 3061 (1967); and

(4) as a practical matter the candy bear would not be chiefly used as an article of utility i.e., for the users to carry their personal belongings during travel.

In the case of Ideal Toy Corp. v. United States, 78 Cust. Ct. 28, C.D. 4688 (1977), the court made the observation that "when amusement and utility become locked in controversy, the question becomes one of determining whether the amusement is incidental to the utilitarian purpose, or the utility purpose incidental to the amusement."

It is our observation in this instance that although the novelty backpack does have some play value, it is incidental to its utilitarian function for the following reasons:

(1) The novelty backpack is purposefully designed to be a functional backpack;

D8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077320

(2) the lack of stuffing in the torso renders the article less like a fully stuffed animal and more like a backpack;

(3) the absence of any filler material causes the article to collapse thus lessening its play value; and

(4) the carrying capacity of the cargo compartment would allow one to carry large items.

In view of the foregoing, it is our position that the novelty backpack is classifiable under the provision for luggage of other textile materials in item 706.4144, TSUS, and dutiable at the rate of 20 percent ad valorem. The applicable textile quota number is 670. As a product of Korea this merchandise would be subject to textile quota restraints.

Sincerely,

Arthur P Schaffer

District Director of Customs
U.S. Customhouse
1 E. Bay Street
Savannah, Georgia 31401

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1703-3-000216

This protest was filed against your decision in the liquidation on April 8, 1983, of entry No. 83-351141-0 dated November 22, 1982, covering a shipment of sport shoes manufactured in Korea.

FACTS:

The fabric/leather sport footwear involved was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that these sport shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

DIU

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on the matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

We have reviewed the component cost breakdowns submitted by the protestant which show that the footwear is in chief value of leather. We have no "tangible evidence" which would permit us to categorically state that the information provided is false. Consequently, it is our position that entry No. 83-351141 should be reliquidated under item 700.35, TSUS, or item 700.45, TSUS, as applicable. However, any youth's sizes 11-1/2 to 2 should be treated as unisex and reliquidated under item 700.45, TSUS.

D11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

HOLDING:

The protest should be allowed. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur F. Schaffler

DEPARTMENT OF THE TREASURY
U.S. CUSTOMS SERVICE
WASHINGTON

MAY - 5 1986

REFER TO
CLA-2 CO:R:CV:G
077337 TLL

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Application for Further Review of New York Seaport Protest No. 1001-5-004744

This is a protest against your decision in the subject application for further review of certain fruit preserves classified under items 146.14 through 150.50, Tariff Schedules of the United States (TSUS). Protestant argues that the products are more properly classified as jams classified under items 153.02 through items 153.32, TSUS.

FACTS:

An organoleptical examination of the imported fruit products was jointly conducted with the Import Specialist, New York Seaport, and the National Import Specialist. A significant amount of recognizable fruit was found in each representative sample of the various products.

ISSUE:

Whether the imported fruit products which contain recognizable fruit can be considered a jam under the TSUS.

DISCUSSION OF LAW:

In Julius Goldfarb v. United States, 55 Cust. Ct. 120 (1965), the court considered a product which consisted of whole strawberries which had been cooked with sugar and pectin and then packed in jars. It noted that while there was no intent to keep the berries whole, they did, in fact, remain so to a large degree. Relying on the common definition of jam - fruit and sugar cooked to a thick consistency, without preserving the shape

D13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

of the fruit, the court concluded that as the strawberries retained their shape and had not been reduced to pulp or crushed, the products were not a jam, but in fact were edible berries, prepared or preserved. This court decision was followed by many administrative decisions, including Headquarters Ruling Letter 060450 (C.S.D. 80-176) which stated that here there is a fixed, highly viscous substance of relatively uniform consistency, with no recognizable pieces of fruit, the products are jams for tariff purposes; products which contain whole or recognizable pieces of fruit would be classifiable as prepared or preserved edible fruits.

Protestant argues that the terms "jams" and "preserves" as used the industry are interchangeable and synonomous and classification should be under items 153.02 through 153.32, TSUS. The history of this tariff provision shows that this argument has been duly considered. See for instance, page 267, Summaries of Trade and Tariff Information, Schedule 1, Volume 8, TC Publication 289 (1969), where the United States Tariff Commission stated:

> No distinction is made between a jam and a preserve by the FDA or by the trade. For tariff purposes, however, a distinction is made. If a fruit is processed and packed in a manner which substantially retains the shape of the fruit, then it is dutiable as a preserve under provisions for "prepared or preserved fruit," and not under the tariff provisions for jams. Conversely, a jam is defined as a product made by boiling fruit and sugar to a thick consistency, without preserving the shape of the fruit. An imported product, properly labeled a jam according to FDA standards, might be dutiable as preserved fruit; similarly, some imported products labeled as a "preserve" (e.g., strawberry preserves) may be dutiable as jam. Generally, the rates of duty for preserved fruits are higher than those for jams.

This same information was restated on page A-37 of USITC Publication 1462 entitled Certain Articles Containing Sugar (1983).

D14

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC

CONCLUSION:

The classification of the imported fruit products as a preserve on the basis of the recognizable fruit content is correct. You are directed to deny this protest. A copy of the decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

William P. Shuffler

Handelsregister Breda, Netherlands 28699

Dear Mr. Verschuur:

Your letter of November 18, 1985, addressed to the United States Embassy in The Hague regarding the importation of Comprima instant press powder has been forwarded to the United States Customs Service for response.

You seek to import into the United States two types of Comprima instant press powder. Type MG gm is composed of 96.5 percent cane or beet sugar and 3.5 percent glucose. Type MG zd also has a cane or beet sugar content of 96.5 percent, with the balance composed of corn starch. Samples of both varieties were enclosed with the file. Both samples are uniform white powders of a very fine grain size. You point out that the imported product is of great interest to the pharmaceutical industry in the United States for use as a raw material.

We have reviewed the submitted file and have concluded that Comprima is classifiable as an edible preparation, not specially provided for, in item 183.05, TSUS, with duty at the rate of 10 percent ad valorem. This position was recently set forth in New York Seaport Ruling 816746 of February 20, 1986, in reply to a request from a potential importer.

In any case, Comprima would not be eligible for entry into the United States. Presidential Proclamation 5071 established a quota in item 958.15, TSUS, for all articles classifiable under item 183.05, TSUS, which contain in excess of 65 percent cane or beet sugar and which are not sold to the retail consumer in the identical form and package in which it was imported. This quota effectively embargoes the importation of this product. In the unlikely event that this product should be held to be classifiable as cane or beet sugar in a dry amorphous form in item 155.20, TSUS, it would be subject to the quota on such sugar and there is no allocation for sugar from Holland.

E2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

There is a suggestion that this product is a sugar classifiable under the provision for "Specialty Sugars" and eligible for entry free of quota. Even if conceded as a "Specialty Sugar" the product likely would still not be entitled to entry because information we have is that this product is produced domestically. Therefore, entry under this program would not be permissible.

Sincerely,

William P. Schaffner

District Director of Customs
300 S. Ferry Street
Terminal Island, San Pedro 90731

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 2704-4-003833

This protest was filed against your decision in the liquidation on August 31, 1984, of entry No. 84-133676 dated April 24, 1984.

FACTS:

Certain women's fashion boots having a 1/2 inch rubber band securing the joint between the sole and upper were liquidated under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics, having uppers of which not over 90 percent of the exterior surface area is rubber or plastics and having a foxing or foxing-like band applied to or molded at the sole and overlapping the upper, valued over $6.50 but not over $12.00 per pair in item 700.69, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear is properly classifiable under the provision for other footwear which is over 50 percent by weight of fibers and rubber plastics with at least 10 percent by weight being rubber or plastics and having uppers of which over 90 percent of the exterior surface area is rubber or plastics (except footwear having foxing or a foxing-like band applied or molded at the sole and overlapping the upper) in item 700.56, TSUS.

E4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The rationale presented for the protestant's position is that Congress did not intend that the foxing exception apply to non-athletic footwear such as the fashion boots in issue. The protestant also asserts that not all footwear having foxing characteristics were intended to fall within items 700.64 through 700.69, TSUS, in view of T.D. 81-79 which eliminated a boot from foxing criteria.

077445

ISSUE:

(1) Does the foxing exception apply to the women's fashion boots?

(2) Does the result reached in T.D. 81-79 control the classification of the women's fashion boots?

LAW AND ANALYSIS:

With respect to style No. 6120 covered by Order Nos. 4045 and 4016, the CF5523 submitted shows that only 41 percent of the exterior surface area of the uppers is rubber/plastics. If this information is accurate, classification under item 700.56, TSUS, is precluded because classification thereunder requires that over 90 percent of the exterior surface area of the uppers consist of rubber/plastics.

In T.D. 83-116, Customs specifically took the position that the foxing exception applies to non-athletic footwear. Also, an earlier ruling issued as CIE 187/64 Supp. 1, dated April 19, 1966, arrived at the same conclusion.

In T.D. 81-79, certain moon boots were found not to have a foxing-like band, not because they were boots, but because their particular construction was not foxing-like. A reading of this ruling shows that had the boots been constructed differently, a finding of the presence of a foxing could have resulted.

ES

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In view of the foregoing, it is our position that classification of the instant women's fashion boots under item 700.69, TSUS, was appropriate.

HOLDING:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Port Director of Customs
Port Huron, Michigan 48060-5471

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3802-5-000136 on the Classification of "V-803 OXO Bottoms," Product of Canada

"V-803 OXO Bottoms" are described as resulting from the production of 2-ethyl hexanol. They are said to be the bottoms of a distillation tower and to contain heavy organic compounds.

A sample of the product was described as a mixture of nonbenzenoid high boiling organic compounds. It was said to appear clear with no other impurities, and was regarded as a nonbenzenoid mixture containing diols.

The question is whether the product is classifiable as a mixture in item 430.10, TSUS, and dutiable under item 428.47, or as a waste in item 793.00, TSUS.

A waste is a material which has ceased, through some change, to serve its original purpose or to be what it originally was. It has the characteristics neither of the raw material or of the finished product, and fit only for remanufacture. Supreme Tire and Rubber Co. v. United States, 7 CCR 193, C.D. 566.

The product in question results from the extraction of 2-ethylhexanol. The imported product is not imported for the purpose of remanufacture, as is the usual case with a waste. It is described as being a mixture of organic compounds with no apparent impurities. It is used as imported to make a preservative product. Similarly, linseed oil foots derived from the alkali refining of linseed oil, which was found to have a large percentage of free fatty acids and salts of fatty acids mixed together was dutiable as a nonenumerated manufactured article in paragraph 1558, Tariff Act of 1930, rather than as a waste in paragraph 1555, Tariff Act of 1930, Archer-Daniels-Midland Company v. United States, 24 CCR 187, C.D. 1229 (1950).

E7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The product is a byproduct, rather than a waste, a mixture of organic compounds, with little or no impurities present.

You are directed to deny the protest in full.

A copy of this decision should be forwarded to the protestant along with the Form 19 Notice Action. The original protest form included with your submission is hereby returned.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Mr. Claude Brosseau
A. N. Deringer, Inc.
30 West Service Road
Champlain, New York 12919-9703

Dear Mr. Brosseau:

This is in response to your request for the tariff classification of merchandise dated November 1, 1985, which the New York Region has referred to us for reply.

The merchandise consists of Longines-data 7000 series optical mark readers made in Canada. The articles come in different models and are used to read various documents, such as tests, and score them or furnish other data derived from them. A read head may consist of a halogen lamp, a fiber-optic cable, and optical elements for reading in rows. These articles are used as peripheral data processing equipment or, with certain programming, independently.

Merchandise of this type is classifiable under the provision for office machines, not specially provided for, in item 676.30, Tariff Schedules of the United States (TSUS). The current column 1 rate of duty required under that provision is 3.9 percent ad valorem. However, any models which have their own calculating mechanism for independent use would be classifiable as data processing machines in item 676.15, TSUS. The current column 1 rate of duty under that provision is 4.1 percent ad valorem.

Sincerely,

Arthur P. Schaffer

New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005090

This protest was filed against your decisions in the liquidation on January 27, 1984, of entry No. 84-190425-5 dated December 7, 1983, and entry No. 84-190424-2 dated November 29, 1983, covering a shipment of athletic footwear manufactured in Korea.

FACTS:

The leather/nylon joggers involved were liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

The protestant also claims that the footwear was classified as not being "of leather" based on an erroneous theory of law that when determining component material of chief value for the purposes of classification under items 700.35, 700.45 and 700.95, TSUS, the separate values of "rubber" and "plastics" are combined before comparing them to the value of the "leather." It is the protestant's position that the individual values of the rubber and the plastics must be broken out separately.

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

057459

ISSUE:

1. In determining component material of chief value of footwear, should the individual values of the plastics and rubber components be broken out separately?

2. Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

It has been consistently our position that in determining component material of chief value that the plastics and rubber components should be combined.

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on the matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or response.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E11

The manufacturer's component value breakdowns reflect the following costs.

Entry No. 84-190425-5

Invoice No. 1	Leather Costs		Rubber/plastics Costs	
(CH/Youths' Velcro Joggers		$1.13		$0.77
	cutting	.09	cutting	.19
	trimming	.03	trimming	.17
		$1.25	sole labor	.20
				$1.33

Invoice No. 2	Leather Costs		Rubber/plastics Costs	
(M/B Velcro Joggers	M	B	M	B
	$1.37	$1.29	$0.96	$0.89
cutting	.09	.09	cutting .19	.19
trimming	.03	.03	trimming .17	.17
	$1.49	$1.41	sole labor .20	.20
			$1.52	$1.45

Entry No. 84-190424-2

Invoice Nos. 1 and 2	Leather Costs	Rubber/plastics Costs
	$1.763	$0.575
cutting	.10	cutting .08
trimming	.05	trimming .06
	$1.913	sole labor .27
		$0.985

"Sole labor" listed under the rubber/plastics components covers the costs of grinding and buffing the different layers of the bottoms. L.D. 81-0186 of December 16, 1981, stated that these costs should be allocated among the materials comprising the bottoms. It is not possible to allocate stitching charges on the above because there is no indication of weights on the various components comprising the uppers.

A review of the component value breakdowns on Entry No. 84-190425-5 shown above reveals that the rubber and plastics components constitute the component material of chief value of this footwear. Consequently, it is our opinion that classification of the joggers under item 700.95, TSUS, was appropriate.

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077459

Although the component value breakdown for the joggers covered by entry No. 84-190424-2 shows leather to be in chief value by a wide margin, we know that the 2.097 sq. ft. of leather claimed to be present in a pair of women's size 6 joggers is inaccurate. However, in the absence of a laboratory report as to the amount of leather actually present in the shoes, we have no "tangible evidence" to refute the claim that the shoes are in chief value of leather. Consequently, the shoes should be reliquidated under item 700.45, TSUS.

077459

HOLDING:

The protest should be denied in part as to the footwear covered by entry No. 84-190425-5 (invoice Nos. 1 and 2) and allowed in part as to that footwear covered by entry No. 84-190424-2 (invoice Nos. 1 and 2). A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Shepffer

Mr. Gordon E. Tonkin
Department of External Affairs
125 Sussex Drive
Ottawa, Onario, Canada KIA OG2

Dear Mr. Tonkin:

Your letter of November 5, 1985, regarding the classification of four coupon books was forwarded to this office for reply.

Samples of four coupon books were submitted. They are essentially bound coupons, containing virtually no other matter. Three of the sample books are approximately 8 1/4 inches long, and each page consists of three coupons. The fourth book is 4 inches long, and each page, detachable, is one coupon.

Each coupon of the samples is a voucher, worth a reduction in price of a commodity, stated in dollars or as a percentage of price; or worth some commodity or service free of charge under certain stated conditions. Each coupon "has no intrinsic value as article(s), but is valuable only as evidence that certain amounts of money (or goods or services)" are available.

Your letter seeks confirmation that classification under either item 274.75 or 274.80, Tariff Schedules of the United States (TSUS), would be applicable. Our review of the coupon books has led us to conclude that they are intangibles under General Headnote 5(d), TSUS, and as such are not articles subject to the provisions of the Schedules.

With regard to the possible application of 19 U.S.C. 1305, that provision prohibits the importation of lottery material. The courts have interpreted "lottery" to mean that three elements are necessary: a prize, a consideration, and a chance. Since you have indicated that there is no requirement of consideration for any of the sample booklets, 19 U.S.C. 1305 would not affect the importation of this material.

Sincerely,

William V. Schaffler

077533

Sidney H. Kuflik, Esq.
Lamb & Lerch
Counsellors at Law
233 Broadway
New York, New York 10279

Dear Mr. Kuflik:

In a letter dated December 16, 1985, on behalf of your client, Gerico, Inc. of Denver, Colorado, you inquired as to the tariff classification of a nylon bag for a baby carrier and whether the bag is entitled to an exemption from the country of origin marking requirements. You state that the nylon bag will be a product of either Taiwan or the People's Republic of China.

The sample submitted is a nylon stuff bag which resembles a small duffle bag in shape. There is a nylon drawstring closure. Nylon binding is used to stitch the one seam and extends above the top forming a three inch loop. This loop is designed so that the bag can be carried by hand or suspended from the handle of a baby stroller or carriage when traveling with the baby. The bag is designed to contain the carrier and other accessories such as a diaper, baby bottle, etc.

The importer, Gerico, is currently marketing a baby carrier both with or without the stuff bag. In those instances in which the carrier is marketed without the stuff bag, it is packaged in a polyethylene bag with a cardboard header. Baby carriers are usually sold in such packaging.

It is your opinion that the nylon bag is merely a packaging device having the subsequent incidental use as a storage bag and is therefore properly classifiable under the provision for other articles not specially provided for, of textile materials, ornamented in item 386.13, Tariff Schedules of the United States (TSUS). The basis for your claim is said to be Headquarters Ruling letter (HRL) No. 075534 dated April 29, 1985, which held that a cotton storage sack for a sleeping bag is classifiable under item 386.50, TSUS.

HRL No. 075534 does not support your claimed classification. That decision is applicable to the type of cotton bag involved therein and under the same circumstances. That cotton storage bag was to be imported with a sleeping bag and a nylon stuff bag. The nature of a down or fiber filled sleeping bag requires a breathable bag by which the sleeping bag can be hung-up to air dry after a night exposed to the elements. If the filling remains damp, it loses its insulating value and developes an odor. The storage bag was constructed of a gauze type cotton fabric which was not intended for travel but rather to allow the sleeping bag to aerate. The use of the cotton storage bag is peculiar to a sleeping bag.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Noting that the stuff bag is imported without the baby carrier, General Headnote 6(a), TSUS, would apply in determining its classification. In its condition as imported the bag is of the type usually sold at retail as a "stuff sack" or "ditty bag."

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS, provides in pertinent part that "For the purposes of the tariff schedules — (a) the term 'luggage' covers -- (i) travel goods such as *** kitbags, haversacks, duffle bags, and similar articles designed to contain clothing or other personal effects during travel."

The nylon stuff bag is a "similar article" within the cited headnote. Also, it is obvious that the bag is designed to contain the baby carrier and other personal effects while traveling with the child. An ideal example would be when a parent takes the child on an outing with the stroller. When desired, the child can be placed in the carrier and the bag continues to hold the other personal effects. Practical daily observation especially at public parks and amusement centers demonstrates that the bag was not designed to be a mere storage bag to be left at home when going places with the child. In fact the baby carrier requires no storage bag as evidenced by Gerico's sale of the baby carrier without the stuff bag.

In view of the foregoing, it is our opinion that the sample nylon bag is within the purview of the term "luggage" for tariff purposes. However, in a supplemental letter dated April 9, 1986, you called our attention to the fact that the drawstring of the nylon bag is made of woven braid cord. You suggest in the event that this office decides that the nylon bag falls within the luggage provisions of the schedules that classification under the provision for luggage of other textile materials, wholly or in part of braid in item 706.34, TSUS, is appropriate.

In order to classify the nylon bag, it is first necessary to interpret the phrase "in part of braid" as it appears in Schedule 7, Part 1, Subpart D, TSUS. General Headnote 9(f)(iv), TSUS, provides that "'in part of' or 'containing'" means that the article contains a significant quantity of the named material. This headnote also provides that the de minimis rule applies. Our previous interpretation of the word "significant" as applied to the phrase "in part of" implies a degree of usefulness, of being necessary or meaningful. Therefore, an item would contain a significant quantity of braid if that portion or quantity serves a useful purpose and/or increases the saleability of the article. In E. Fougera & Co. v. United States, 49 Treas. Dec. 986 T.D. 41632 (1926), the court determined that the phrase "in part" related to "a substantial part in a commercial sense." The decision in Fougera is amplified by Aceto Chemical Co., Inc. v. United States, 75 Cust. Ct. 167, C.D. 4625 (1975) at 169, and United States v. Cavalier Shipping Co., Inc., 60 CCPA 152, C.A.D. 1103 (1973), wherein it was noted that only in the most limited of circumstances should a quantitatively minute amount of the specific materials control the tariff classification. See Headquarters Ruling Letter 073592 dated June 12, 1984, which emphasizes the necessity of determining whether the amount used has really changed or affected the nature of the article.

F2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

An examination of the sample submitted indicates to us that the added braided feature will not really change or affect the nature of the bag or its saleability. Accordingly, it is our position that the merchandise is properly classifiable under the provision for other luggage of other textile materials in item 706.4152, TSUS, and dutiable at the rate of 20 percent ad valorem. If the bag is produced in Taiwan, it is subject to quota/visa restraints under quota category No. 670.

With respect to the country of origin marking, you maintain that the nylon bag is entitled to an exemption therefrom pursuant to 19 U.S.C. 1304(3)(H) and 19 CFR 134.32(h). You assert that because Gerico is purchasing the nylon bag for its own use, namely packaging and storing its soft baby carrier, it qualifies as the ultimate purchaser of the goods. Specifically, Gerico is entitled to the exemption due to the fact that by the circumstances of the importation Gerico will necessarily know the country of origin of the nylon bags even though it is not marked on the bags.

An ultimate purchaser may be defined as the last person in the United States who will receive the article in the form in which it was imported. If an article is to be sold at retail in its imported form the purchaser at retail is the ultimate consumer. We do not agree that Gerico qualifies as the ultimate purchaser of the nylon bag. This bag was not designed merely for storage or packaging. As stated previously it was designed and is used after retail sale to contain the baby carrier and other personal effects when traveling with a child. In this instance Gerico is not entitled to an exemption from the country or origin marking requirements because it is not the ultimate purchaser within the purview of 19 U.S.C. 1304(3)(H) and 19 CFR 134.32(h).

The nylon bag must be marked to indicate the country of origin as provided by section 304, Tariff Act of 1930, as amended (19 U.S.C. 1304). In order to avoid confusion, it is suggested that the existing sewn-in label be amended to read "Bag made in...."

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Martin J. Lewin
Ms. Teresa M. Polino
Mudge, Rose, Guthrie, Alexander and Ferdon
2121 K Street, N.W.
Washington, D.C. 20037

Dear Mr. Lewin and Ms. Polino:

In your letter of December 23, 1985, and your conference of April 2, 1986, you requested a reconsideration of New York letter 815459 dated December 3, 1985. New York letter 815459 classified two types of women's flannel nightwear under the provision for women's wearing apparel, ornamented, of cotton, other, not knit, other, in item 384.0925, Tariff Schedules of the United States Annotated (TSUSA). Samples of the two nightgowns in question were submitted along with your reconsideration request.

Style 8528 is a women's 100 percent cotton flannel, waltz-length (40 inches) gown with a 1.5 inch ruffled stand-up collar, a 1.75 inch ruffled cuff, and a 6 inch ruffle at the bottom of the gown. Style 9880C is a woman's dorm pajama which is 34 inches long at the center of the back with a 1 inch ruffled stand-up collar, plain cuffs, a shirt-tail bottom and matching bikini pants.

The styles at issue, style 8528 and style 9880C, each have a piece of gathered fabric (i.e., a ruffle) at the neckline. This fabric is inserted in the neckline seam between the bodice of the garment and the facing. The fabric does not finish a raw edge.

You claim that the ruffles at the necklines of the nightgowns do not constitute ornamentation because they are functional features in that they provide warmth for the wearer's neck. New York Customs classified the nightgowns as ornamented because the ruffles at the neck enhanced the appearance of the nightgowns; New York Customs thought that the ruffles were primarily decorative.

You argue that, in previous Customs rulings, where ruffles served a bona fide function, the ruffles were held not to be ornamentation. You rely especially on Customs Headquarters Ruling Letter (HRL) 069012 dated November 19, 1981, which said in passing that the argument "that this type of ruffle provides additional warmth may have some merit where the ruffle is attached to a long-sleeved cotton flannel nightgown which is worn primarily for warmth." (Emphasis added.)

F4

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

You claim that the 1.25 inch ruffle at the neck of style 8528 and the 1 inch ruffle at the neck of style 9880C do not constitute ornamentation because their primary function is to provide warmth at the wearer's neck. You also claim that the ruffles prevent cold air from getting inside the garments. You argue that the neck is one of the most exposed parts of the body and that women who choose nightgowns with ruffles at the throat do so because the ruffles provide additional warmth. Relying heavily upon HRL 069012, you argue that the ruffles are functional and that their functional aspects outweigh any decorative aspects which the ruffles might have.

Your reliance upon HRL 069012 is misplaced. The sentence upon which you place so much emphasis merely said that the argument (i.e., that a ruffle at the neck was functional in that it provided extra warmth) might have merit if the nightgown was worn primarily for warmth.

To recapitulate, HRL 069012 (Internal Advice 131/81) dealt with ruffles at the necklines of cotton dorm pajamas. Part of HRL 069012 concerned the rationales for considering a neckline ruffle to be functional. One rationale mentioned was that a neckline ruffle might provide additional warmth when found on flannel nightgowns. We concluded, however, that the rulings on the subject were inconclusive and that a classification practice (i.e., to call flannel nightwear with neckline ruffles not ornamented) did not exist.

Headnote 3, Schedule 3, Tariff Schedules of the United States (TSUS), provides that the term "ornamented" refers to textile articles which are ornamented with, among other things, textile fabric. The courts have ruled that the test for ornamentation is whether the feature serves a primarily decorative rather than utilitarian function. Colonial Corp. of America v. United States, 62 Cust. Ct. 502, C.D. 3815 (1969). There is no question that the subject ruffles have a decorative effect upon the nightwear in question. The question is whether the ruffles also serve a functional purpose which overrides their decorative effect.

Style 8528 has a 1.5 inch ruffle. Style 9880C has a 1 inch wide ruffle. The assertion that these ruffles provide warmth is unsupported. A ruffle is merely a styling feature designed to enhance and embellish the appearance of the garment. The ruffles in question do not finish a raw edge. They enhance the appearance of the nightwear. While they may conceivably afford the wearer some additional warmth, we find that this functional factor is outweighed by the decorative effect both ruffles create. The decorative effect of both ruffles far outweighs the purpose of providing a bit of extra warmth.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

We find that the classification of styles 8528 and 9880C as other women's wearing apparel, ornamented, of cotton, not knit, other, pajamas and other nightwear, in item 384.0925, TSUS, is correct. We hereby reaffirm New York letter 815459.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

28 MAY 1986

CLA-2:CO:R:CV:G
077545 PR

This ruling concerns the tariff status of a certain woman's garment and tie belt.

ISSUE:

There are three issues that are presented by the submitted sample: (1) whether the garment is classifiable under the ornamented apparel provisions in the tariff schedules because of rows of stitching found in various locations; (2) whether the tie-belt is classifiable as an entirety with the garment or is classifiable separately; and (3) whether the garment is classifiable as a shirt or as a jacket.

FACTS:

The submitted sample is a martial arts style woman's upper body garment. It is made from a lightweight woven cotton fabric. While the garment resembles part of a martial arts uniform, it is much too light and flimsy to be worn as such. A 2 inch by 84 inch belt of the same fabric as the garment will be imported with the garment. The belt is intended to be tied around the waist of the wearer. It has 4 rows of stitching which are essentially the same color as the fabric from which the belt is made. The garment is approximately hip length and has a full front opening which is secured at approximately waist level by two fabric ties located on the inside of the garment. It has 3/4 length

077545

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

sleeves, shoulder pads, and side slits. The placket and sleeve cuffs each have four rows of noncontrasting stitches similar to that on the belt. There are no labels in the sample garment or belt. Since we are advised by the inquirer that it is a woman's garment, we will proceed on that assumption.

LAW AND ANALYSIS:

In order for a feature on a garment to cause that garment to be classifiable as ornamented for tariff purposes, that feature must be one which is listed in Headnote 3, Schedule 3, Tariff Schedules of the United States Annotated (TSUSA), and be determined to be primarily decorative in nature. Stitching, such as found on the belt, placket, and cuffs, is within the purview of Headnote 3. However, it appears that on the subject garment and belt, the decorative effect of the stitching is minimal and the functional value of that stitching in adding a desired degree of stiffening to those areas outweighs any decorative aspect of the stitching. Accordingly, the garment and belt are not ornamented for tariff purposes.

Headnote 3 to Part 6, Schedule 3, TSUSA, provides that, except for certain classes of apparel sets, each garment is to be separately classified even if two or more garments are imported together and designed to be sold together at retail. One of the exceptions to this rule is for judo, karate, and other oriental martial arts uniforms. In a ruling of February 12, 1986, file C77496, Customs held that belts were

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077545

intended to be included within the coverage of that headnote. Accordingly, substantial belts were stated to be classifiable separately, except if those belts fell within the purview of one of the named exceptions.

In this instance, while martial arts uniforms are excepted from the purview of the headnote, the subject garment is not a martial arts uniform. At best, it may be argued that the submitted sample is part of a martial arts uniform, not the uniform itself. However, as stated above, this office believes that the garment is much too light to be used in the martial arts.

The question then arises whether the instant belt is within the class of articles covered by Headnote 3, supra. In order to decide the issue, Customs has reexamined its ruling of February 12, 1986, and has concluded that it requires clarification. Section (a) of Headnote 3 provides:

> Except as provided in (b) of this headnote, each garment is to be separately classified under the appropriate tariff item, even if two or more garments are imported together and designed to be sold together at retail.

Our February 12 ruling did not fully consider whether articles (other than string ties) which act as belts and consist only of the identical fabric (including color and pattern) as the accompanying apparel item constitute a "garment" within the purview of Headnote 3(a) when they do not have a buckle, clasp, or special attachment for closure purposes. Generally, such articles are insignificant in

077545

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

relation to the dress, pants, coat, etc., with which they are intended to be worn, are of little value, are not useable on other apparel items, are not sold separately, and, although technically within the definition of a "belt," do not reasonably fall within the class of articles covered by Headnote 3(a). Accordingly, such "belts" will continue to be classified with the apparel items they accompany.

The remaining question to be resolved is whether the subject garment is a shirt or a jacket. Although lightweight, the subject garment does not appear to be the type of garment that would be worn in place of a shirt. Rather, considering the nature of the front opening and the garment as a whole, the subject merchandise will normally be worn over a shirt or a blouse, in the manner of a jacket. The garment is, therefore, classifiable as a coat or jacket for tariff purposes.

HOLDING:

The sample jacket and belt is classifiable as an entirety under the provisions for other women's or girls' wearing apparel, of cotton, not knit and not ornamented, coats, in either item 384.3500, TSUSA, if valued not over four dollars each, or in item 384.3777, TSUSA, if valued over four dollars each. In either event, the textile and apparel category applicable to the instant garment is 335.

077545

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

F10

We have been advised by the Committee for the Implementation of Textile Agreements that the June 10, 1986, effective date of our ruling of February 12 will not provide importers and foreign governments, with whom the United States has entered into bilateral textile agreements, sufficient time to adjust to that ruling. Accordingly, pursuant to section 177.9(d), Customs Regulations (19 CFR 177.9(d)), our ruling of February 12, 1986, file 077496, is hereby modified to reflect the principles set out above and that an importer of merchandise which is affected by that ruling may, for merchandise entered, or withdrawn from warehouse, on or before August 31, 1986, continue to enter such merchandise as entireties. After that date, all merchandise affected by either the February 12, 1986, ruling or this ruling will be classified in accordance with the principles set out above.

Sincerely,

(Signed) Harvey B. Fox

Suite 107
Miami, Florida 33143

Dear Ms. Pevsner:

This is in reference to your inquiry concerning the dutiable status of an unleaded gasoline which your client F&H Chemical Corp. wishes to import from Brazil, Romania or Mexico.

You describe the petroleum product as being unleaded and meeting all the standards set forth in ASTM D-439, for automotive gasoline "except that it has an octane level of 85 to 86.9." For this reason you contend it should be classified as a naphtha.

Contrary to your understanding, under ASTM D-439, the minimum octane level for unleaded automotive gasoline is 85. Inasmuch as this petroleum product meets all of the standards for unleaded gasoline listed in ASTM D-439 it is classifiable as motor fuel in item 475.25, TSUS.

Sincerely,

Arthur P. Schaffer

CLA-2 CO:R:CV:G
077587 JGH

District Director of Customs
U.S. Customs Service
77 S.E. 5th Street
Miami, Florida 33131

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 5201-2-000358, Classification of Shampoo Ingredients, Products of British West Indies

The entries in question were made between September 1979 and February 1981. The products are designated as EM 764, JU-760 and Kotah LO-03. Ju-760 and Kotah LO-03 are said to be chiefly used for their dermatological properties in shampoo and bath additives. EM 764 was found on laboratory analysis to be a mixture of fatty substances.

Various claims were made in behalf of the importer as to the classification of these products. EM 764 was said to be a surface active agent in item 465.95, or a fatty acid in item 465.35. Kotah LO-03 was claimed to be a nonenumerated article in item 799.00, a cosmetic preparation in item 461.40 or wood tar oil or benzenoid mixture in 407.09. JU-760 was claimed to be dutiable under item 465.95, item 409.30, benzenoid surfactant; wood tar oil in item 494.40, or a drug in item 439.50.

Analysis of EM 764 disclosed that the product contained sodium lauryl sulfate, alkyl ethanolamide (fatty amide) and a fatty ester. Therefore, it is an artificial mixture of two or more of fatty substances, in item 491.00, TSUS.

Analysis of Kotah LO-03 and JU-760 disclosed that they both contain Coal Tar Solution, U.S.P. Coal Tar Solution, U.S.P., is composed of coal tar, polysorbate 80 and alcohol. It is considered a "drug" ingredient under Headnote 9, Part 1(c), Schedule 4, TSUS. JU-760 also contains a non-ionic benzenoid emulsifier. The products are not surface active agents, so that items 465.35 or 465.95 do not apply. As they are of identifiable chemical composition, neither does item 799.00 apply, nor do the other items listed apply. Kotah LO-03 and JU-760, if entered before July 1, 1980, are classified as benzenoid medicinals in item 407.85, TSUS. If entered on or after July 1, 1980, these two products would be classifiable under the provision for benzenoid dermatological agents in item 412.14, TSUS.

F13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

EM-764 is not a surface active agent but a mixture of fatty substances, and therefore classifiable in item 491.00, TSUS.

You are directed to deny the protest in full. You are requested to furnish the protestant with a copy of the decision with the Form 19 Notice of Action.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

CLA-2 CO:R:CV:G
077603 c

077603

Herbert J. Lynch, Esq.
Sullivan & Lynch, P.C.
Attorneys and Counselors at Law
156 State Street
Boston, Massachusetts 02109

Dear Mr. Lynch:

In a letter dated January 13, 1986, you inquired as to the dutiable status of stocking waders and incomplete waders manufactured in Korea. Samples were submitted for examination.

This merchandise will be imported as completed stocking waders having a pod-like unsized foot portion which will be worn under boots and as incomplete waders which lack a foot portion. After importation the incomplete version will be completed by adding either the "pod" bottoms or boots. Both the finished and the incomplete versions will be imported in six fabric types labelled A through F. With the exception of D, all variations consist of textile fabric coated, filled or laminated with rubber or plastics in which the textile is present on the exterior surface. Type D has a non-transparent rubber on the exterior and interior surfaces and a middle layer of textile fabric.

It is our position that the finished imported stocking waders constructed of fabric type D are classifiable under the provision for other wearing apparel not specially provided for, of rubber or plastics in item 772.3195, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 6.3 percent ad valorem. The finished stocking waders constructed of fabric types A, B, C, and E are classifiable under the provision for other garments designed for rainwear, hunting, fishing, or similar uses, wholly or almost wholly of fabrics which are coated or filled, or laminated with rubber or plastics, which (after applying Headnote 5 of Schedule 3) are regarded as textile materials in item 376.56, TSUS, and dutiable at the rate of 9.1 percent ad valorem. See T.D. 56545(194). Those waders which do not rise over 6 inches above the natural waistline would fall within textile category No. 647, if for men. Those extending over 6 inches above the waist would be in category No. 659. The finished stocking waders constructed of fabric F which is in chief value of cotton are dutiable at the rate of 7.6 percent ad valorem under item 376.54, TSUS. The applicable textile category number is 359.

It is our position that the unfinished wading outfits imported without anything to cover the foot are not unfinished footwear even if their only function is to have either a "pod" or boot attached by an American maker before sale to the public. Any import which does not cover any part of

G1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

the foot cannot be considered "footwear" because it lacks the essential character of footwear. In terms of the specific tests cited in the case of Daisy-Heddon Div. Victor Comptometer Corp. v. United States, 66 CCPA 97, C.A.D. 1228 (1979), the omitted part, which covers the foot has such significance "to the overall functioning of the completed article" as footwear that the import is not "substantially complete."

With respect to classification outside of the footwear provisions, it is clear that if the wading outfits could be completed only with the attachment of boots, they would not be considered "wearing apparel" for tariff purposes because parts of footwear are not "wearing apparel." See Westminster Corp. v. United States, 78 Cust. Ct. 22, C.D. 4687 (1977).

If the incomplete waders could be completed only with the attachment of "pods," i.e., comparatively shapeless foot coverings designed to be worn under boots, they would be classifiable as unfinished wearing apparel. However, you state that these articles can and may be completed either with boots or "pods." It is our observation that it is commercially feasible to complete the imported articles as either footwear or as wearing apparel. Because of this it is our opinion that classification as unfinished wearing apparel is precluded. See Headquarters Ruling Letter No. 056984 dated March 20, 1980, wherein it was held that if flatwear blanks could be finished as either spoons or forks they would be classifiable not as "unfinished," but as articles of metal.

Based on the foregoing, it is our view that the incomplete waders are classifiable as articles according to component material of chief value. Waders constructed of fabric types A, B, and E are classifiable under the provision for articles not specially provided for, of textile materials, not ornamented, of man-made fibers, knit in item 389.4000, TSUS, and dutiable at the rate of 4 cents per pound plus 14.6 percent ad valorem. Incomplete waders constructed of fabric C are classifiable under the provision for other articles not specially provided for, of textile materials, not ornamented, of man-made fibers, not knit in item 389.6270, TSUS, and dutiable at the rate of 4 cents per pound plus 10 percent ad valorem. Incomplete waders constructed of fabric F, if in chief value of cotton, are classifiable under the provision for articles not specially provided for, of textile material, not ornamented, of cotton, not knit in item 386.5300, TSUS, and dutiable at the rate of 8.2 percent ad valorem. Incomplete waders constructed of fabric D, if chiefly used as parts of footwear (i.e. finished with boot attachments), are classifiable under the provision for parts of footwear of rubber or plastics in item 774.50, TSUS, and dutiable at the rate of 6.5 percent ad valorem or entitled to duty-free treatment under the Generalized System of Preferences (GSP), if otherwise

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC.

G2

qualified. If not chiefly used as parts of footwear these incomplete waders are classifiable under the provision for other articles not specially provided for, of rubber or plastics in item 774.55, TSUS, and dutiable at the rate of 5.7 percent ad valorem or entitled to duty-free treatment under the GSP, if otherwise qualified.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Renee Sonn
F.W. Myers & Co., Inc.
P.O. Box 1270
Seattle, Washington 98111

Dear Ms. Sonn:

This is in response to your letter of January 13, 1986, filed on behalf of importer of record Coral Sea Wholesale & Marketing Industry Ltd., requesting a ruling concerning the country of origin of shop towels cut and hemmed in Hong Kong but made of fabric woven in China. It should be noted that the towels about which you inquire have already been detained by U.S. Customs in Seattle, Washington.

The towels are 18 inches by 18 inches and are made of 100 percent woven cotton. The shipment left Hong Kong bound for the United States on October 11, 1985. A certificate of Hong Kong origin accompanied the towels. Customs in Seattle has refused entry of the merchandise on the basis that the true country of origin is, in fact, China. You appeal for a "special" ruling that would hold the subject merchandise to be of Hong Kong origin so that anti-dumping duty can be avoided and necessary visas from China need not be obtained.

On March 5, 1985, Customs published in the Federal Register (50 FR 8710) as T.D. 85-38 a final rule which promulgated new regulations concerning the entry of textiles and textile products. The regulations were held effective to all shipments exported from their country of origin on or after April 4, 1985. Inasmuch as the subject merchandise was exported from Hong Kong on October 11, 1985, it necessarily must have been exported from its country of origin, China, prior to that date. Accordingly, these textile products fall under these regulations.

Section 12.130(e)(2) of the Customs Regulations (19 CFR 12.130(e)(2)) provides that an article cannot be considered as a product of a foreign territory or country by virtue of merely having undergone cutting to length or width when the fabric which is so cut is readily identifiable as being intended for a particular commercial use. Towelling as you describe, when exported from China to be cut and hemmed in Hong Kong, is considered to be intended for a particular commercial use. See Analysis of Comments, 50 FR 8714.

G4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Towelling comprised of fabric which is the product of China and is cut to length or width elsewhere remains, for purposes of the textile regulations, a product of China. Accordingly, the subject towels, although cut in Hong Kong, are products of China.

We note that you have requested a ruling on a matter that is not prospective, but rather is the subject of a current transaction. Technically, this is in contravention of the Customs Regulations. We caution that the Internal Advice procedures spelled out in section 177.11 of the Regulations (19 CFR 177.11) should be used in future when disputes arise with regard to current transactions.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Hendrik te Neues
te Neues Publishing Company
15 East 76th Street
New York, New York 10021

Dear Mr. te Neues:

You have requested a tariff classification ruling for certain printed calendars to be imported from West Germany.

The submitted sample calendar, "Sightseeing 1986: A Space Exploration," consists of eight sheets of glossy paper, each approximately 12-3/8 inches by 24 inches, laid one upon another and fastened together along the center with three wire staples. When all the sheets are folded along the center row of staples, the calendar is closed. When opened out, it can be hung on a wall using a small hole at the top of each sheet. A calendar grid for each month is paired with a captioned color photograph showing some aspect of the U.S. space exploration program. One of the sheets, which is perforated along the center, can be torn out easily and serves to advertise the te Neues Publishing Company and the many types of calendars it has available. The outer sheet, which forms the front and back covers, is of a heavier paper than the inside pages.

Assuming that the calendar has been printed in whole or in part by a lithographic process, it is classifiable in Part 5 of Schedule 2 under item 274.10, Tariff Schedules of the United States (TSUS), if not over 0.020 inch in thickness; or under item 274.15, TSUS, if over 0.020 inch in thickness. If the calendars are products of West Germany, the Column 1 rate of duty will apply. The 1986 Column 1 rate for item 274.10 is .5 cent per pound; for item 274.15, 2.1 cents per pound. Further reductions are scheduled: as of January 1, 1987, the Column 1 rate for item 274.10 will be "Free"; for item 274.15, it will be 2 cents per pound.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

66

Headnote 3 of Part 5 provides that the "thickness" of printed matter produced by a lithographic process "is that of the thinnest paper contained therein, except that the thickness of a permanently mounted lithograph is the combined thickness of the lithograph and its mounting." Therefore it is necessary to determine whether the calendar contains "permanently mounted" lithographic prints.

The Tariff Acts of 1909, 1913, 1922, and 1930 provided that for tariff purposes the thickness of lithographed materials was to be that of the thinnest sheet, except that "the thickness of lithographs mounted or pasted upon paper, cardboard, or other material, shall be the combined thickness of the lithograph and the foundation on which it is mounted or pasted." In the few cases decided under that provision, the courts gave differing interpretations to the term "mounted," saying at one time that Congress had meant that for a process to be considered mounting, it had to be at least as permanent as pasting; but later saying that Congress had intended "mounting" to have a very broad meaning under which many types of processes would qualify. See, for example, W. White v. United States, T.D. 36844, 31 Treas. Dec. 589 (1916); United States v. Thorens, Inc., 32 CCPA 137, C.A.D. 298 (1945).

When Congress enacted the tariff schedules in 1962, it provided in Headnote 3, as indicated above, that the combined thickness of a lithograph and its mounting was to be used for tariff purposes when the lithograph was "permanently mounted." Cases decided under the amended statute have not shed much light on the meaning of that phrase. In Graphics International Inc. v. United States, 63 Cust. Ct. 330, C.D. 3916 (1969), the merchandise in question was lithographically printed inserts for children's magazines, consisting of a base sheet with glued-on printed pop-up figures. The parties agreed that the lithographs were "permanently mounted," and the court did not discuss the meaning of the term. Similarly, in Charles Scribner's Sons, v. United States, --CIT--, Slip Op. 83-98 (September 30, 1983), where the merchandise was determined to be a calendar properly classifiable as being not over 0.020 inch thick, the court did not discuss the meaning of "permanently mounted," or the mounting of that particular calendar, although a witness had testified that the spiral binding was not permanent.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077647

67

Finally, we note our ruling 070998, of September 22, 1983, which determined that a calendar consisting of 12 sheets held together at the top with a piece of thin folded gray metal was not mounted at all, let alone permanently mounted, because it lacked any kind of base or foundation.

Headnote 3 provides that "the thickness of a permanently mounted lithograph is the combined thickness of the lithograph and its mounting." (Emphasis supplied.) Permanent mounting, then, requires at a minimum some kind of mounting, that is, a backing used for reinforcement or display. Webster's Third New International Dictionary (Unabridged ed. 1971). Because your calendar is attached to a thicker backing that forms the cover, we consider it to be "mounted." However, because of the non-permanent nature of the fastening, that is, the three wire staples, the calendar is not "permanently mounted" for purposes of Headnote 3 to Part 5 Schedule 2, TSUS. Therefore, the thickness relevant for determining the rate of duty under item 274.10 or 274.15, TSUS, is that of the thinnest page, as indicated above.

Sincerely,

Arthur P. Schaffner

077650

Kurt Olson, Esq.
McDermott, Will and Emery
1850 K Street, N.W.
Washington, D.C. 20006

Dear Mr. Olson:

Your letter of January 21, 1986, concerns the tariff status of a mixture of anhydrous ethyl alcohol and 7.25 to 7.5 percent ethylbenzene (by volume).

The mixture would be manufactured in a GSP eligible country, with all constituent materials used being produced in the beneficiary developing country (BDC).

A ruling on this product cannot be provided as the quantities are given in terms of percentages by volume. You will have to submit a component breakdown by weight before a decision can be made on the matter.

You indicate that in a certain instance the ethylbenzene component of the mixture may be a product of a non-BDC which is imported into the BDC and used to produce the final mixture. You ask whether under these circumstances the mixture would be eligible for duty-free treatment under the Generalized System of Preferences provided that the 35 percent value added criterion is met.

Because of the recently published Presidential Proclamation 5452, there are no longer any duty free benefits for mixtures containing alcohol of the type described, if a product of GSP eligible country. Rather these types of mixtures are now fully dutiable. If the ethanol mixture has an ethylbenzene content of 7 percent or more by weight, it is classifiable under the provision for benzenoid mixtures containing alcohol in item 407.17, TSUS. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate would be ethanol classifiable in item 427.88/901.50. The rate of duty is 3 percent ad valorem plus 60 cents per gallon.

If the ethanol mixture contains less than 7 percent by weight of ethylbenzene, it would be classifiable as ethanol in item 427.88/901.50, with a rate of duty of 3 percent ad valorem plus 60 cents a gallon.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Ralph C. Meola
Corporate Transportation Manager
Rhone-Poulenc Inc.
P.O. Box 125
Black Horse Lane
Monmouth Junction, New Jersey 08852

Dear Mr. Meola:

You have requested a tariff classification ruling for five types of artificial zeolite designated molecular sieves 13X, sodium silico-aluminate; 4A, sodium silico-aluminate; 3A, sodium and potassium silico-aluminate; 4AFT, a mixture of sodium silica-aluminate and alumina; and 5A, sodium and calcium alumino-silicate. They are products of France.

Naturally occurring zeolites are minerals that have the capacity to act as cation exchangers or as molecular sieves. Synthetic forms can be tailor made to enhance desirable commercial properties. All five molecular sieves involved in this ruling request are stated to be homogeneous mixtures of reaction and to have crystal structures represented by specific chemical formulas. In the form of beads or pellets, they are shipped in steel drums. The literature you have sent further indicates that molecular sieves can be used for gas or liquid drying, gas or liquid purification, separation of saturated and unsaturated hydrocarbon mixtures, and drying of air in confined spaces. Their suitability for these purposes results from their reversible adsorption capabilities, easily exchangeable cations, and network of calibrated pore openings yielding a high internal surface area. A bed of molecular sieves works in one of two ways when a gas or liquid is passed through it: either it separates molecules by allowing only those smaller than the pore openings to enter and be adsorbed; or, when the gas or liquid is composed only of molecules that are very small, it will adsorb molecules of higher polarity by affinity.

Depending on what their chemical, mineralogical, and physical properties are, what they are considered to be by scientists and the trade, and what their end uses are, synthetic materials may be identified as their natural counterparts for tariff purposes. T.D. 84-130. However, the molecular sieves in question here cannot be said to be synthesized forms of naturally occurring zeolites such as chabazite, mordenite, or faujasite. Rather, our Technical Services Division indicates that they are more properly described as mixtures of inorganic compounds. As such they are subject to classification in Schedule 4, Tariff Schedules of the United States (TSUS), even if they might in some sense be describable as mineral substances, as provided in several headnotes in the tariff schedules. Headnote 1(i) to Schedule 4 provides: "This schedule does not

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

include . . . any of the mineral products provided for in Schedule 5." Headnote 1 to Part 2, Schedule 4, provides: "This part covers chemicals, except those provided for elsewhere in this schedule and those specially provided for in any of the other schedules." Headnote 1(i) to Subpart 1K, Schedule 5, provides: "This subpart covers mineral substances and articles of mineral substances, not provided for elsewhere in the schedules, but does not include . . . chemical elements or chemical compounds in Part 2 of Schedule 4, or mineral substances provided for in other parts of Schedule 4." In International Selling Corp. v. United States, 62 Cust. Ct. 23, 25, C.D. 3669, 294 F. Supp. 642 (1969), the Customs Court considered these headnotes and stated:

> We read the above headnotes to mean that in the case of merchandise which might be subject to dual classification under Schedule 5 or Schedule 4, Schedule 5 must be given preference except in the instance of those mineral substances under Subpart K thereof, which are chemical elements or chemical compounds provided for in Part 2 of Schedule 4, or mineral substances provided for in other parts of Schedule 4.

Inasmuch as these molecular sieves are chemical compounds provided for in Part 2 of Schedule 4, the latter takes precedence. Therefore, they are properly classifiable under item 423.96, TSUS, as other mixtures of two or more inorganic compounds.

Sincerely,

Arthur P. Schaffner

077662

District Director of Customs
New Orleans, Louisiana 70130

Dear Sir:

Re: Decision on Application for Further Review of Protest Nos. 2002-4-000124-155-143-181-210-251-267-306-366-182-208-230-297-298-299-300 and 385

These protests were filed against your decisions in the liquidations of various entries covering shipments of athletic footwear produced in Korea.

FACTS:

The athletic shoes involved were liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestants claim that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Does the documentation provided by the protestants show that the shoes are in chief value of leather?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the

A3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on the matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

Protest No. 2002-4-000124

This protest covers 4,200 pairs of men's and women's nylon/leather joggers which are claimed to be properly classifiable under item 700.45, TSUS. It is our position that classification under item 700.95, TSUS, was appropriate because the component value breakdown submitted is not in the correct format and does not show the amount of leather claimed to be present in a pair of these men's and women's joggers.

Protest No. 2002-4-000155

This protest covers 10,008 pairs of women's nylon/leather casual shoes which are claimed to be properly classifiable under item 700.45, TSUS. It is our position that classification of these shoes under item 700.95, TSUS, was appropriate because the manufacturer's component value breakdown did not show the amount of leather claimed to be present in a pair of these shoes.

Protest No. 2002-4-000143

This protest asks for a refund of $227.23 in connection with the liquidation of style No. 5264K. Actually, style No. 5264K was liquidated under item 700.35, TSUS, at 8.5 percent ad valorem, as entered. However,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Invoice No. 3 covering 2,394 pairs of women's nylon/suede joggers was advanced to 700.95, TSUS, at 12.5 percent ad valorem rather than 700.45, TSUS, at 10 percent ad valorem, as entered. It is our position that classification of the shoes covered by Invoice No. 3 under item 700.95, TSUS, was appropriate because the manufacturer's component value breakdown for these joggers shows a cost of 81 cents for leather including cutting and trimming against a cost of 91 cents for rubber/plastics costs including 23 cents for sole labor.

Protest No. 2002-4-000181

This protest covers 5,400 pairs of men's, boys', and women's nylon/suede joggers. As far as we can determine, these joggers are all approximately the same style but on the manufacturer's value breakdown covering the men's size 8, we note that manufacturer claims he purchased a total of 2.13 sq. ft. at $1.08 plus 11 cents for cutting and trimming. However, on a boy's size 4, the manufacturer shows 2.03 sq. ft. of leather purchased at $1.1297 plus .2408 cent for cutting and trimming. It is our position that classification under item 700.95, TSUS, was appropriate in view of the contradictory data provided by the importer which was not explained.

Protest No. 2002-4-000210

As far as we can determine Order No. 4813K covering 3,600 pairs of men's and boys' mesh and smooth leather hitop basketball shoes were liquidated under item 700.95, TSUS, with duty at the rate of 12.5 percent ad valorem. However, the manufacturer's component value breakdown shows leather charges on this style amounting to $2.50 against $1.22 for the rubber/plastics components. Therefore, classification as leather footwear

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

under item 700.35, TSUS, was appropriate. However, this protest covers 7,152 pairs of men's and boys' nylon/suede leather joggers liquidated under item 700.95, TSUS. A review of the manufacturer's component value breakdown shows leather charges on the men's size as $1.06 against $1.21 for the rubber/plastics components. That breakdown for the boys' size shows 87 cents for leather charges against a cost of $1.09 for the rubber/plastics components. In view of the foregoing classification of the 7,152 pairs of shoes under item 700.95, TSUS, was appropriate.

Protest No. 2002-4-000251

This protest covers misses/childs/infants leather/fabric sport shoes. The protestant claims that the footwear is in chief value of leather. Although the protestant has attached copies of the commercial invoice and the CF 5523, it neglected to include the corrected value breakdown mentioned in its protest. Inasmuch as the protestant has not supplied any evidence to support the claim that this footwear is in chief value of leather, it is our view that classification of the shoes under item 700.95, TSUS, was appropriate.

Protest No. 2002-4-000267

This protest covers Invoice No. 4 on 3,600 pairs of men's nylon/suede leather joggers which were liquidated under item 700.95, TSUS, with duty at the rate of 12.5 percent ad valorem. It is our position that classification of these shoes under item 700.95, TSUS, was appropriate because the manufacturer's component value breakdown shows that the footwear is in chief value of rubber/plastics.

077662

A6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Protest No. 2002-4-000306

This protest covers 8,352 pairs of men's/boys'/youths' sport shoes. The manufacturer's component value breakdown shows $1.29 for leather costs including 40 cents for cutting against $1.166 for the rubber/plastics charges. The 40-cent charge for cutting appears very high when compared with other cutting charges shown by different manufacturers. It is our position that the shoes should have been classified under item 700.35, TSUS, inasmuch as we have no tangible "evidence" to contradict the cutting charges.

Protest No. 2002-4-000366

This protest covers men's/boys'/youths' nylon/suede leather joggers. The three manufacturers' component value breakdowns submitted indicate that the joggers are in chief value of leather. Therefore, these joggers in men's and boys' sizes should have been classified under item 700.35, TSUS, while the youths' sizes are considered unisex classifiable under item 700.45, TSUS.

Protest No. 2002-4-000182

This protest covers 4, 800 pairs of men's nylon/leather joggers. It is our position that classification under item 700.95, TSUS, was appropriate because the component value breakdown submitted does not show the amount of leather purchased or the amount of leather claimed to be present in the shoes. It should be noted that the manufacturer was well aware of the information required on component value breakdowns.

Protest No. 2002-4-000208

This protest covers 3,600 pairs of men's nylon/leather joggers. It is our position that classification under item 700.95, TSUS, was appropriate inasmuch as a component value breakdown was not submitted with the protest.

A7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Protest No. 2002-4-000230

This protest covers 1,536 pair of men's nylon/leather joggers. It is our position that classification under item 700.95, TSUS, was appropriate inasmuch as a component value breakdown was not submitted with the protest.

Protest No. 2002-4-000297

This protest covers 1,524 pairs of style Nos. 55-5002-5 and 55-5001-1 which include boys'/youths' nylon/leather footwear. Based on the component value breakdown these shoes appear to be in chief value of leather. Therefore, it is our position that they should have been classified under item 700.35, TSUS, with the exception of youths' sizes 10 through 2 which should have been treated as unisex classifiable under item 700.45, TSUS.

Protest No. 2002-4-000298

This protest covers 9,144 pairs of nylon/leather joggers which are claimed to be classifiable under item 700.35, TSUS, and item 700.45, TSUS. It is our position that classification under item 700.95, TSUS, was appropriate because a review of the component value breakdowns show that the claimed leather costs on the men's joggers were $1.35 against $1.40 for the rubber/plastics costs and on the women's sizes, the leather costs were $1.13 against $1.27 for the rubber/plastics costs.

Protest No. 2002-4-000297

This protest covers nylon/leather joggers which are claimed to be classifiable under item 700.35, TSUS. A review of the component value breakdown for these joggers shows a leather cost of $1.26 against a cost of $1.40 for the rubber plastics components when the 34 cents for the "sole labor" is added. It should be noted that Headquarters Ruling Letter No. 077216 c dated December 13, 1985, held that the cost of the "sole labor" is

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A8

077662

properly attributable to the rubber/plastics costs because the bottom is all rubber or plastics. In view of the foregoing, it is our position that classification under item 700.95, TSUS, was appropriate.

Protest No. 2002-4-000300

This protest covers footwear included on two different entries. A review of the documents submitted reveals that there was no value breakdowns submitted with entry No. 84-704513-4 and entry No. 84-704042-1. It is our position that in the absence of the required documents that classification of the footwear under item 700.95, TSUS, was appropriate.

Protest No. 2002-4-000385

This protest covers 5,922 pairs of women's canvas and leather sandals with PVC soles which were entered and liquidated under item 700.95, TSUS. It is now claimed that the footwear is in chief value of leather which requires classification under item 700.45, TSUS. It is our view that classification of these shoes under item 700.95, TSUS, was appropriate because a component value breakdown was not submitted showing that the shoes were in chief value of leather.

HOLDING:

Protest Nos. 2002-4-000306-366 and 297 should be allowed.

Protest No. 2002-4-000210 should be allowed in part as to Order No. 4813K covering 3,600 pairs of men's and boys' mesh and smooth leather hitop basketball shoes and denied in part as to the 7,152 pairs of men's boys' nylon/suede leather joggers.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

A9

077662

Bill Alberger, Esq.
Bishop, Liberman, Cook, Purcell & Reynolds
120 Seventeenth Street, N.W.
Washington, D.C. 20036

Dear Mr. Alberger:

Your letter of January 22, 1986, in behalf of Cotia America, Ltd., concerns the dutiable status of a mixture of 92.5 percent ethanol and 7.5 percent ethylbenzene, by volume, from a country entitled to GSP benefits. It is assumed the mixture is intended for fuel use.

Effective March 31, 1986, under Presidential Proclamation 5452, ethanol mixtures classifiable under the various specified mixture provisions of the tariff schedules are no longer entitled to duty-free treatment if products of a country entitled to GSP benefits.

In addition, since the percentages in the mixture you mention are in terms of volume instead of weight, a binding ruling is not possible, since classification of mixtures of this type is based on weight.

If an ethanol-ethylbenzene mixture contains 7 percent or more ethylbenzene by weight of the entire mixture, it is classifiable as a benzenoid mixture containing ethylalcohol in item 407.17, TSUS. The rate of duty is 1.7 cent per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate would be ethanol dutiable under items 427.88/901.50, TSUS, at 3 percent ad valorem plus 60 cents per gallon.

Ethanol mixtures of the type described containing less than 7 percent ethylbenzene by weight of the entire mixture are classifiable in item 427.88/901.50, TSUS, and dutiable at 3 percent ad valorem plus 60 cents per gallon.

Sincerely,

Harvey B. Fox

Philip D. Saxon, Esq.
Duane, Morris & Heckscher
Suite 1017
Wilmington Trust Center
Rodney Square North
Wilmington, Delaware 19801

Dear Mr. Saxon:

Your letter of January 30, 1986, concerns the dutiable status of a mixture of ethanol and ethylbenzene presumably intended as a motor fuel additive. The mixture would contain by weight no more than 92.5 percent ethanol and no less than 7.5 percent by weight ethylbenzene. A mixture of this composition would be classifiable under item 407.17, TSUS (formerly item 407.16) dutiable at the rate of 1.7 cents per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. The component with the highest rate would be ethanol classifiable under item 427.88/901.50 and dutiable at 3 percent ad valorem plus 60 cents per gallon.

Effective March 31, 1986, entries of ethanol mixtures classifiable in item 407.17, TSUS, are no longer eligible for duty-free status under the Generalized System of Preferences.

Sincerely,

Harvey B. Fox

H. Darrel Darby, DPM
President
Darby, Inc.
1038 6th Avenue
Huntington, West Virginia 25701

Dear Dr. Darby:

This is in further reference to your letters of January 29, and February 3, 1986, which requested reconsideration of a New York decision on the tariff classification of the Darby Shoe.

You describe it as an orthopedic device used as a postoperative surgical-trauma shoe and splint. You state that the shoes are not designed to be worn in pairs and are generally used singly by patients who have had surgery, suffered trauma, or some deformity that handicaps an individual for a short period of time. The disability usually lasts any where from one to eight weeks, then the shoe is thrown away. Our examination of a sample shows it is a multipurpose convalescent shoe with no special features which would avoid its characterization as footwear.

It is your position that the shoe should be classified in item 709.57, Tariff Schedules of the United States (TSUS). However, General Interpretative Rule 10(c), TSUS, provides that an imported article which is described in two or more provisions of the schedules is classifiable in the provision which most specifically describes it. We have held in previous rulings on similar articles that the footwear provision is more specific than the provision for other orthopedic and similar appliances. Further, Schedule 7, Part 1, Subpart A, Headnote 1, TSUS, provides that all footwear designed for human wear is to be classified as footwear except for (1) footwear with permanently attached skates or snowshoes, (2) hosiery, and (3) infant's knit footwear. The article in question is not listed as one of the exceptions.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A13

Under the foregoing precedents and rules of construction, the fact that a shoe is designed for convalescent, post surgical, orthopedic or other medical purpose does not avoid its tariff classification as footwear so long as the article, such as the instant sample, retains its essential character as footwear. Nor does temporary use or the fact that a shoe is not worn in pairs affect its dutiable status.

Accordingly, the multipurpose convalescent shoe at issue was properly classified as footwear in item 700.59, TSUS.

Sincerely,

Arthur P. Schaffner

Harvey B. Fox
Director, Classification
and Value Division

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

077696

DATE: 5 JUN 1986

FILE: CLA-2 CO:R:CV:G
077696 sm
806919

TO : Chief, Commercial Operations
Branch 3, New York Seaport

FROM : Director, Office of Regulations and Rulings
Headquarters, U.S. Customs Service

SUBJECT: Reconsideration of New York Ruling 806919
Your File CLA-2-03:S:COM:N:3:I-358-15 of
January 21, 1986

You have asked us to reconsider the portion of ruling 806919 of September 26, 1983, issued to J. Moyles and Associates, Inc., on behalf of Jewel Imports, that determined that a swimsuit designed to accommodate buoyancy aids and sold together with them was properly classified under item 383.19, Tariff Schedules of the United States (TSUS) (currently item 384.19, TSUS), as other ornamented wearing apparel, of man-made fibers, knit. Reconsideration was requested because the ruling of September 26, 1983, appears to be inconsistent with a prior Headquarters ruling covering substantially the same type of merchandise.

The merchandise that prompted the request for reconsideration is sold under the name "My Buddy Swim Trainer." It consists of a girls'-style knit swimsuit of 100 percent nylon with large snap openings in the front and back to accommodate foam inserts. On the front, a large decal-type decoration of plastic material that appears to have been applied by heat transfer is an applique, and constitutes ornamentation. "My Buddy" is designed to keep children buoyant while they practice swimming strokes in a natural position. It is intended to maintain confidence without dependency since it permits gradual decrease in the number of floats worn as children learn to swim on their own. Imported without the floats, the swimsuit is packaged and sold together with them in the United States.

It is our determination that this article is properly classifiable as wearing apparel, and that ruling 806919 is therefore correct. In Admiral Craft Equipment Corporation v. United States, 82 Cust. Ct. 162, 164, C.D. 4796 (1979), the Customs Court stated:

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC

B1

> A provision for wearing apparel is a classification by use. Cf. United States v. Hillier's Son Co., 14 Ct. Cust. Appls. 216, T.D. 41706 (1926). Accordingly the test of whether an article falls within the classification is whether it belongs to the class of articles used as wearing apparel. See Bangor & Aroostook Railroad Co. et al. v. United States, 20 CCPA 96, T.D. 45724 (1932).

In Antonio Pompeo v. United States, 40 Cust. Ct. 362, 364, C.D. 2006 (1958) the court also considered the question of what constitutes wearing apparel, and stated:

> Dictionary definitions tend to indicate that wearing apparel refers to clothes or covering for the human body worn for decency or comfort, and common knowledge indicates that adornment is also an element of many articles of wearing apparel.

The article in question here is used as wearing apparel, i.e., it is worn by children for swimming. Color pictures on the package show it being so used. It also meets the requirements of being worn for decency or comfort. As an added feature it has two snap openings that allow the insertion of foam floats. However, these floats cannot be used unless a child is already wearing the swimsuit, and the suit can be worn without using the floats at all.

This article was properly classified under item 383.19, TSUS (currently item 384.1920, TSUSA, quota category 659). Headquarters ruling 062901 of June 16, 1980, which determined that a different classification was correct for a similar swimsuit, is hereby modified, pursuant to 19 CFR 177.9(d), to the extent that it is at variance with this decision.

Thank you for bringing this matter to our attention.

Harvey B. Fox

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: APR 30 1986

FILE: CLA-2:CO:R:CV:G
077703 SM
077704

TO : District Director of Customs
Miami, Florida 33131-2595

FROM : Director, Classification and Value Division

SUBJECT: Requests for Further Review of Protests Nos. 5201-5-000347 of July 19, 1985 and 5201-5-000335-339 of July 10, 1985

These protests concern the classification of women's cotton shirts, style 9071, from India. These are hip-length short-sleeved shirts with three buttons down the center full front opening. On each side of the front, a pocket with a curved opening extends from the hemline to approximately half way to the shoulder seam and from the side seam to about an inch from the front opening. On the center of each pocket, a single stitched-down tuck with a free standing edge about a quarter of an inch wide extends vertically from the top of the pocket into the hemline. You determined that these articles are classified under item 383.05 (now item 384.05), Tariff Schedules of the United States (TSUS), as women's wearing apparel, ornamented, of cotton, not knit. The importer claims that the merchandise is properly classified under item 383.47 (now item 384.46), TSUS, as not ornamented.

The importer's representative stated on the Form 19 that no reason was given for the "ornamented" classification, and that this classification contradicts Headnote 3, Schedule 3, TSUS, and is inconsistent with various Customs rulings.

However, the Form 29 clearly states that the tuck on each pocket was the reason for the determination, and Headnote 3 provides that tucking can constitute ornamentation. Furthermore, we are not aware of, nor has the importer's representative cited, any rulings by Customs that are not in accord with your classification of this garment.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B3

077703/077704

Ruling 041922, of November 24, 1975, for example, determined that tucking on the pockets of a short-sleeved shirt-jacket constituted ornamentation. Further, in Excelsior Import Associates v. United States, 79 Cust. Ct. 144, C.D. 4726 (1977), aff'd, 66 CCPA 1, C.A.D. 1212 (1978), the Customs Court held that the single one-inch wide tuck on a shirt pocket constituted ornamentation.

A feature specified in Headnote 3, appearing on a finished garment in a conspicuous place, performing no utilitarian purpose, and having a decorative effect will be considered ornamentation. Colonial Corp. of America v. United States, 62 Cust. Ct. 502, C.D. 3815 (1969). The tucks on the garment in question are prominently located on the front. Like the tucks discussed in Excelsior Import Associates, supra, they do not serve any functional purpose but only produce a visual effect enhancing the appearance of the shirt.

Therefore, we are in agreement with your position that this garment is properly classified under item 383.05, TSUS, as women's ornamented wearing apparel, and you should deny this protest in full. A copy of this decision should be forwarded to the protestant along with your Form 19 Notice of Action.

Mr. P. A. Novelly
Apex Oil Company
8182 Maryland Avenue
St. Louis, Missouri 63015-3721

Dear Mr. Novelly:

Your letter of January 22, 1986, concerns the dutiable status of an ethanol-alkylbenzene mixture from a designated beneficiary developing country under the Generalized System of Preferences (GSP). It is assumed that the product will be used for fuel purposes.

It is your opinion that a mixture of 93 percent ethanol and 7 percent alkylbenzene would be free of duty under item 407.16, TSUS, from a country entitled to GSP benefits.

Pursuant to Proclamation 5452, ethanol mixtures of this type are no longer entitled to duty-free treatment under the GSP. Rather they are fully dutiable under the provision for benezenoid mixtures containing ethyl alcohol in item 407.17, TSUS. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate is ethanol classifiable in item 427.88/901.50. The rate of duty is 3 percent ad valorem plus 60 cents per gallon.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Ronald L. Rapaport
Metal Film Company, Inc.
1717 Paterson Plank Rd.
North Bergen, New Jersey 07047

Dear Mr. Rapaport:

We are responding to your request dated November 27, 1985, for a ruling on the tariff classification of certain metallic yarns.

The imported merchandise sold under the trademark Lurex is produced by encasing aluminum foil or metalized Mylar between two sheets of clear polyester film that is bonded to both sides of the middle layer by an adhesive. Color is applied by adding pigment to the adhesive. Then the sheet is slit to the desired width, and the yarn is spooled. As imported in this condition, the yarn is a monofilament not over 150 denier.

It is your belief that the subject merchandise is classifiable as a metalized yarn in item 312.30, Tariff Schedules of the United States (TSUS).

Schedule 3, Part 1, Subpart F, Headnote 1(a), TSUS, defines the term "metalized yarns" for tariff purposes to be "yarns in chief value, but not wholly, of tinsel wire or lame".

The subject merchandise does not satisfy the definition in the headnote, because Lurex yarns are not in chief value of tinsel wire or lame.

It is our view that Lurex yarns are classifiable under the monofilament provisions in the Tariff Schedules. This is supported by the following statement in the Tariff Classification Study Explanatory Materials:

> Another technique in producing monofilaments is to cut thin strips from laminated sheets which may include a film or layer of metal or other material....

> Whatever production technique is used to produce a monofilament, such filaments, subject to reasonable limits as to their cross-sectional dimension, should be included as man-made fibers.

And the courts have held that it is proper to consult the Tariff Classification Study to determine the legislative intent of particular provisions of the Tariff Schedules. See Rifkin Textiles Corp. v. United States, 54 CCPA 138, C.A.D. 925 (1967).

The Customs Service has maintained this distinction between yarns and monofilaments in its administrative determinations. Merchandise similar to that in question has been classified by Customs according to value and denier under the provision for monofilaments in items 309.02 through 309.06, TSUS. See Headquarters Ruling Letters (HRL) MCS 474.511 M dated March 24, 1970, and 068030 dated May 21, 1981. Thus, the appropriate classification for the subject merchandise is in item 309.03, TSUS.

You also have expressed concern about the classification of Lurex when it is shipped as a supported yarn with two ends of 15 denier nylon criss-crossed over and under the metallic filament.

On this point, in HRL 039816 dated July 7, 1975, we stated that supported Lurex was classified under the provision for other yarns of man-made fibers, other in item 310.60, TSUS, because the criss-crossing pattern of the two nylon filaments around the Lurex filament is considered to be more than a plying operation, in turn, which makes the supported Lurex more than a plied yarn. It follows that if Lurex is imported as a supported yarn, it is classifiable in item 310.60,TSUS.

As for your claim that a uniform and established practice exists to classify this type of merchandise as metalized yarns in item 312.30, TSUS, an examination of all the entries filed by the importers listed in your letter during 1984 and 1985 under the tariff provisions in dispute fails to support your contention.

We note that you have requested a ruling on a matter that is not prospective, but rather is the subject of a current transaction. Technically, this is in contravention of the Customs Regulations. We caution that the Internal Advice procedures spelled out in section 177.11, Customs Regulations, should be used in the future when disputes arise with regard to current transactions.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

077750

Mr. John Cunningham
Certified Petroleum Corporation
303 South Front Street
Columbus, Ohio 43215

Dear Mr. Cunningham:

Your letter of January 29, 1986, concerns the dutiable status of a blend of what is described as at least 7 percent ethylbenzene and mixed xylenes and no more than 93 percent ethanol. It is stated that the blend would be imported from a designated beneficiary developing country under the Generalized System of Preferences. Effective March 31, 1986, ethanol mixtures are no longer entitled to benefits under the GSP.

Since the ethylbenzene content in the mixture described would be less than 7 percent by weight of the entire mixture, the mixture would be classified, as a mixture containing ethyl alcohol in item 432.26, TSUS. The rate of duty is 3.9 percent ad valorem but not less than the highest rate applicable to any component material. The highest rate in this mixture would apply to ethanol under item 427.88/901.50, TSUS, of 3 percent ad valorem plus 60 cents per gallon, assuming that the mixture is intended for fuel purposes.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

1707 L Street, N.W.
Washington, D.C. 20036

Dear Mr. Belanger:

In a letter of February 10, 1986, you requested on behalf of your client, N.V.W. (USA), Inc., a ruling on the tariff classification of coated and scroll cut steel sheet.

The merchandise is tin-free steel sheet which is cut to specific lengths. Two edges of each sheet are cut in a scroll pattern. An epoxy phenolic lacquer is then sprayed onto one side of each sheet, heated, and dried. The product is to be used in the manufacture of ends for cans. The diameter of the cans determines the pattern of the scrolled cut in order to maximize the number of can ends per sheet.

The scroll pattern has no apparent function in the finished product. Each scroll is designed to permit the maximum number of can ends (top or bottom) from a given surface area, and, therefore, to reduce waste. In prior rulings we have held that similar scroll cut steel sheets have been processed beyond the condition of a basic sheet of steel as provided for in Subpart B, Part 2, Schedule 6, Tariff Schedules of the United States. Ruling letter of September 11, 1978 (file 057211); ruling letter of March 13, 1978 (file 056338).

The coated scroll cut steel sheets are classifiable under the provision for other articles of iron or steel in itm 657.25, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Richard R. Somers
W. N. Proctor Company, Inc.
115 Broad Street
Boston, Massachusetts 02101

Dear Mr. Somers:

You have requested a tariff classification ruling on behalf of the Pellon Company for a material called Viledon Type PA/560 G that is used to make air filters.

Examination of your sample shows that this product is composed of a layer of dense, nonwoven polyester fiber textile fabric approximately 3/4 of an inch thick, laminated with a woven man-made fiber textile scrim. You state that it will be shipped in rolls about 65 feet long and 6.5 feet wide from the country of manufacture, West Germany.

You state in your request that similar nonwoven materials have been classified by Customs as nonwoven fabrics of textile materials under item 355.25, Tariff Schedules of the United States (TSUS), in rulings including 053287 and 073668. Ruling 053287, of March 3, 1979, concerned the classification of certain textile fabrics used as wall covering materials. The fabric classified by that ruling under item 355.25, TSUS, was wholly a nonwoven fabric and was not laminated. The other two fabrics the subject of that ruling were laminated with a paper backing, and were classified under item 359.50, TSUS. Similarly, in ruling 073668, of August 20, 1984, there is no indication that the nonwoven textile filter material classified under item 355.25, TSUS, was laminated to another fabric.

This product is properly classifiable under item 359.50, TSUS, as a laminated textile fabric not specially provided for, of man-made fibers.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Allan H. Kamnitz, Esq.
Sharretts, Paley, Carter & Blauvelt, P.C.
80 Broad Street
New York, New York 10004

Dear Mr. Kamnitz:

In a letter dated February 14, 1986, on behalf of Dover Handbag, you inquired as to the dutiable status of a "Hug-A-Pet" toy (Style No. 1243) manufactured in Taiwan. A sample was submitted for examination.

The sample "Hug-A-Pet" toy is a plush comical depiction of a panda bear that measures approximately 12 inches in height and is in chief value of man-made textile materials. The head and appendages of the sample are stuffed but the interior of the body is devoid of filler material. A 4-1/2" x 4" nylon pouch with a zipper closure is affixed to the back of the bear's trunk. Adjustable textile tape harness straps are attached to the four legs of the toy animal.

The sample is in all material respects indistinguishable from the novelty "candy bear" which was the subject of Headquarters Ruling letter No. 076982 c dated October 24, 1985. In that ruling, a 12 inch plush textile animal with adjustable harness straps and a hollow body cavity was found to be a source of play value to the exclusion of any significant functional use. The target age group, minimal storage space, and preponderant play value were factors indicating its chief use as a toy. These factors are present in the nature and design of the instant sample.

In view of the foregoing, it is our position that the "Hug-A-Pet" novelty backpack is classifiable under the provision for toy figures of animate objects (except dolls): not having a spring mechanism: not stuffed: other in item 737.40, Tariff Schedules of the United States (TSUS), and dutiable at

FROM : Director, Classification and Value Division

SUBJECT: Tariff Classification of Tea Containing Flowers, Petals, and Fruit Peel: IA No. 12/86

The subject internal advice concerns the tariff classification of tea containing flowers, petals, and fruit peels. The products, described on the attached invoices as OP or BOP with flowers, peels, pieces, or leaves, were entered under the provision for tea, crude or prepared, in item 160.50, TSUS, and were reclassified by your office under item 183.05, TSUS, the provision for other edible preparations not specially provided for. The company claims it has imported and entered such teas under item 160.50, TSUS, for many years. It further notes this merchandise is described in Tea Standard No. 800. The company views this as an "incongruity," and presumably is of the opinion the Tea Standard should control the tariff classification.

The meaning of the term "tea" in item 160.50, TSUS, was discussed in Mitsugi Higashi v. United States, 64 Cust. Ct. 25, C.D. 3954 (1970). The court reviewed lexicographic and technical sources, the Summaries of Trade and Tariff Information, and the Tariff Classification Study. The majority concluded the common meaning of "tea" to be the product of the tea plant or tea tree (Thea sinensis, now Camilla sinensis), and not products used to make tea-like beverages. If not more specifically provided for elsewhere, the latter would be classified as edible preparations not specially provided for. A product's use in the same manner as tea did not dictate classification as such. Hence the classification of the merchandise at bar in item 182.[illegible] (now 183.05) TSUS. This principle was administratively followed in classifying a beverage product made from the plant Aspalathus Lineans in item [illegible]2.92 (183.05) TSUS (Headquarters letter 059820 CM dated March 8, 1979), and in holding certain herb, mint, and spice teas were other than tea in Headquarters letter 059626 CM dated August 10, 1978.

This limitation of the term tea also may be found on page 9 of the Summary of Trade and Tariff Information, USITC Publication 841, February 1982, entitled Chicory, Tea, and Mate, wherein it is stated, "Tea is the dried leaf of an evergreen tree which grows in warm, rainy regions of the tropics and subtropics."

B14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077797

Although a sample was not submitted with the request for internal advice, it is assumed, based upon the invoice descriptions OP and BOP, that the subject teas are, in fact, products of the tea plant. However, they also contain flowers, leaves, and fruit peels. Mitsugi did not define a product containing more than products of the tea plant. The court's source materials referred to "the prepared leaves of the tea plant," "the leaves, leaf buds and internodes of this plant," "the manufactured product prepared from the green leaves by fermentation and firing; the drink brewed from the manufactured product." The instant merchandise would therefore be outside the common meaning of "tea" in item 160.50, TSUS.

Insofar as Tea Standard No. 800 is concerned, we find it to be irrelevant for classification purposes. In ORR 360-69, a product that would appear to be clearly described by this Tea Standard was considered more than tea, and classified as an edible preparation, not specially provided for.

Accordingly, tea containing flowers, petals, and fruit peels are properly classified under item 183.05, TSUS. You should advise the IA applicant of this decision.

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-017355

This protest was filed against your decision in the liquidation on October 21, 1983, of entry No. 83-374998-1 dated September 8, 1983, covering a shipment of athletic footwear.

FACTS:

The athletic footwear involved covered by Invoice No. 3 was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for other footwear of leather for men, youths and boys in item 700.35, TSUS.

ISSUE:

Does the value breakdown submitted by the protestant show that the shoes are in chief value of leather?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

c2

The manufacturer's cost breakdown reflects the following costs:

ORDER KAK 1046 (patt. KUN 2380)

Leather cost =	men $1.33	Boys $1.23
cutting & trimming=	.18	.18
	1.51	1.41
Rubber & plastics cost =	men $1.05	Boys $1.00
cutting -	.17	.17
trimming -	.09	.09
sole labor -	.20	.20
	$1.51	$1.46

Inasmuch as there is no indication of the weights of the upper components, it is impossible to allocate the stitching charge shown on the cost breakdown.

The breakdown shows that the leather and rubber/plastics charges are the same for the men's sizes while on the boy's sizes the rubber/plastics charges exceed the leather charges.

It is our position that classification of the shoes under item 700.95, TSUS, was appropriate noting that the cost breakdown shows that neither the men's nor the boys' sizes are in chief value of leather.

HOLDING:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner
for Harvey B. Fox

6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-007633

This protest was filed against your decision in the liquidation on April 6, 1984, of entry No. 84-268758-4 dated March 6, 1984, covering a shipment of athletic footwear produced in Korea.

FACTS:

The nylon/leather athletic footwear involved was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

1. Does the documentation presented by the protestant show that the shoes are in chief value of leather?

2. Is Customs required to accept the cost breakdowns submitted by the protestant?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has

c4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

evidence in its possession that the cost breakdown is erroneous; or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that importer-submitted data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

In reviewing the component value breakdowns submitted, we note that the manufacturer has allocated his stitching costs on the basis of his material costs, counting the costs of materials with the "V" typed in the "stitching part" column. This allocation is not in agreement with the instructions set forth in L.D. 81-0186 dated December 16, 1981, that the "cost of stitching leather overlays onto the fabric uppers should be allocated among the materials comprising the uppers in proportion to their relative weights."

Therefore, we have ignored the stitching charges shown on the value breakdowns because they are not calculated correctly. After excluding the stitching charges, we note that the following styles are in chief value of rubber/plastics as follows:

Style BOG-6274
(Invoice No. 1)

Leather cost	- $1.061	Rubber/plastics cost	- $1.061
Sorting	- .012	Cutting	- .057
Cutting	- .036	Sole Labor	- .179
	$1.109		$1.297

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Style BOG - 6274
(Invoice No. 2)

Leather cost	- $.879	Rubber/plastics cost	- $.875
Sorting	- .012	Cutting	- .057
Cutting	- .036	Sole Labor	- .179
	$.927		$1.111

In view of the foregoing, classification under item 700.95 was appropriate.

With respect to the other styles which are claimed to be in chief value of leather, we have no "tangible evidence" which would permit us to categorically state that the information provided by the protestant as to component material of chief value is false. Accordingly, those styles should be reliquidated under item 700.35, TSUS, or item 700.45, TSUS, as applicable. However, any youth's sizes 11 1/2 to 2 should be treated as unisex and reliquidated under item 700.45, TSUS.

HOLDING:

The protest should be denied in part as to style Nos. BOG-6274 (Invoice No. 1) and BOG (Invoice No. 2) and allowed in part as to the remaining styles. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Shuffler

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-007490

This protest was filed against your decision in the liquidation on March 30, 1984, of entry No. 84-2684202 dated February 21, 1984, covering a shipment of athletic footwear manufactured in Korea.

FACTS:

Certain nylon/leather footwear was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous; or (3) the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that importer-submitted data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

The cost breakdowns submitted by the manufacturer show the following costs:

P.O. 58128/58374

Leather cost	- $.9462	Rubber/plastics cost	- $1.0624
Cutting	- .0317	Cutting	- .0205
Trimming	- .0141	Trimming	- .0124
Stitching	- .2286	Sole Labor	- .1301
	$1.2206	Stitching	- .0615
			$1.2869

P.O. 58373

Leather cost	- $1.2435	Rubber/plastics costs	- $.7436
Cutting	- .0372	Cutting	- .011
Trimming	- .0157	Trimming	- .0086
Stitching	- .2314	Sole Labor	- .1309
	$1.5278	Stitching	- .0683
			$.9624

The cost breakdown covering misses' sizes (P.O.58128/58374) shows that these shoes are in chief value of rubber/plastics. Consequently, classification of the shoes under item 700.95, TSUS, was appropriate.

The cost breakdown covering the women's joggers (P.O. 58373) shows that these shoes are in chief value of leather. We have no "tangible evidence" which would indicate that the cost breakdown is false. Consequently, these shoes should be reliquidated under item 700.45, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

HOLDING:

The protest is denied in part as to the misses' shoes covered by P.O. 58128/58374 and allowed in part as to the women's joggers covered by P.O. 58373. A copy of this decision should be attached to our Form 19 Notice of Action to be sent to the protestant.

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-011741

This protest was filed against your decision in the liquidation on June 8, 1984, of entry No. 190463-7 dated April 6, 1984.

FACTS:

Certain leather/nylon athletic footwear was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has

C10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on this matter was that importer-submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

The manufacturer's cost breakdowns are as follows:

Invoice No. 1 - KAK 1153

Leather cost =	$1.733	Rubber/plastics cost =	$ .63
cutting =	.10	cutting =	.08
trimming =	.05	trimming =	.06
	$1.883	sole labor =	.26
			$1.03

Invoice No. 2 - KAK 1142 - Men's Size 9

Leather cost =	$1.36	Rubber/plastics cost =	$1.50
cutting =	.11	cutting =	.09
trimming =	.07	trimming =	.05
	$1.54	sole labor =	.25
			$1.89

KAK 1142 - Boys Size 5

Leather cost =	$1.05	Rubber/plastics cost =	$1.20
cutting =	.10	cutting =	.08
trimming =	.07	trimming =	.05
	$1.22	sole labor =	.25
			$1.58

The cost breakdown for Invoice No. 1 shows that the shoes are in chief value of leather. We have no tangible evidence that the leather costs are false. Therefore, the shoes should have been liquidated at 8.5 percent ad valorem under item 700.35, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C11

238470

The cost breakdowns for Invoice No. 2 show that the shoes are in chief value of rubber/plastics. Therefore, classification of the shoes under item 700.95, TSUS, was appropriate.

HOLDING:

The protest should be allowed in part as to those shoes covered by Invoice No. 1 and denied in part as to the shoes covered by Invoice No. 2. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

SUBJECT: Request for Reconsideration of Internal Advice Request No. 71/84, Concerning the Correct Tariff Classification of Certain Tablet Paper

This request for reconsideration of Internal Advice No. 71/84 was initiated by letters dated January 3, 1986, November 26, 1985 and February 26, 1985, from Harry Kelly, Esquire, representing his client, Herlitz Inc. of Dallas, Texas.

FACTS:

The merchandise at issue is a tablet paper described on the invoice as "woodfree sulphite paper, 16 pound, 17 inches by 22 inches by 500 sheets, white, bleached, uncoated, bond finished, free of any groundwood or other impurities, cellulose fiber from chemical pulp."

In Customs Headquarters Ruling Letter (HRL) 074567 (Internal Advice No. 71/84) of October 24, 1984, the subject paper was classified under the provision for writing paper weighing over 18 pounds per ream, in item 252.75, Tariff Schedules of the United States (TSUS). The inquirer believes that the tablet paper is classifiable under the provision for book and printing paper, not specially provided for, in item 252.67, TSUS. (It should be noted that paper invoiced as 16

C13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

pound, 17 inches by 22 inches for 500 sheets, is equivalent to 36.9 pounds per ream for Customs purposes.)

ISSUE:

Is the tablet paper classifiable as writing paper in item 252.75, TSUS, or as book and printing paper in item 252.67, TSUS?

LAW AND ANALYSIS:

Headnote 2(d) of Schedule 2, Part 4, TSUS, reads as follows: "the term 'writing paper' includes, but is not limited to, papers such as ledger, letter, manifold, note, onionskin, tablet and typewriter paper." This headnote, which defines writing paper, mandates the classification of tablet paper as writing paper. For the instant tablet paper, this means classification in item 252.75, TSUS, because the paper weighs over 18 pounds per ream.

The inquirer claims that the instant paper is chiefly used as book and printing paper in the United States and that, pursuant to the chief use provisions of General Headnote 10(e)(i), TSUS, it must be classified in item 252.67, TSUS. He claims that we are mistaken in assuming that the instant paper is chiefly used as writing paper and that all tablet paper is writing paper. He argues that Customs took notice of the actual use of the instant paper instead of its chief use in HRL 074567. He claims that some but not all tablet paper is writing paper. He argues that the chief use of the class or kind of paper controls the classification, and he presents additional affidavits from

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

074836

C14

executives in the paper industry claiming that the instant paper is chiefly used as book and printing paper in the United States. He claims that "tablet paper" is a generic term used to mean paper weighing 16 pounds or less. He claims once again that similar paper was classified as book and printing paper in item 252.67, TSUS, in HRL 035964 from 1974. In view of the alleged practice classifying similar paper in item 252.67, TSUS, counsel asks Customs to go through a "change of practice" procedure if any other tariff number is found applicable.

In HRL 074567, many of counsel's claims were considered and answered. HRL 035964 deals with paper which has a brightness of 59.5, no sizing and no ash content. The instant paper has a brightness of 85.8, 2.5 percent sizing and 16 percent ash content. As we stated in HRL 074567, these differences mean that the paper at issue in HRL 035964 and the instant tablet paper are not part of the same class or kind, therefore no change of practice is required.

Most of the inquirer's arguments are based upon his contention that, despite Headnote 2(d), supra, the classification of the instant paper is dependent upon the chief use of the same class or kind of paper, which he claims is as book and printing paper.

General Headnote 10(e)(i) states that "in the absence of special language or context which otherwise requires -- a

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D1

tariff classification controlled by use (other than actual use) is to be determined in accordance with the use in the United States at, or immediately prior to, the date of importation...." (Emphasis added.) It is Customs position that, while "writing paper" is normally a chief use provision, Headnote 2(d), Part 4, Schedule 2, TSUS, supra, is "special language" which requires otherwise. It is our opinion that even if it was shown that tablet paper was chiefly used in the United States as book or printing paper (although this does not appear to be the case), tablet paper would still have to be classified as writing paper because Headnote 2(d) is controlling and precludes the operation of General Headnote 10(e)(i). The evidence presented, however, indicates that tablet paper is writing paper rather than book and printing paper.

We note that the American Paper Institute May 1984 Supplement to the Dictionary of Paper, Fourth Edition, refers to tablet paper as writing paper. The Supplement states "It is apparent that there is now a need for additional definitional material describing writing papers and printing paper. This supplement to the fourth edition has been prepared to satisfy that requirement." On page 1 of the Supplement, the "Description of Uncoated Writing and Related Papers" includes a section on "End Use Products" which states "End use products [i.e., of writing and related papers] include, but are not limited to, writing, letters, notes,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D2

mimeographing, spirit duplicating, electrostatic copying, convenience copying papers, writing tablets...."

In HRL 074567, counsel provided samples of items made from the instant tablet paper. The samples consisted of such items as telephone message memoranda, calendar pages, legal pads, lined pads, ruled paper, routing tickets, spiral ruled memo books, and spiral ruled notebooks. All of the exhibits were printed and were furnished, presumably, to prove that the tablet paper was printing paper. Instead they strengthed the Dallas/Ft. Worth import specialist's argument that the instant paper is writing paper. All of the samples fit into the category of writing paper, in which specific written data will be added later by pen, pencil, typewriter or some other means. In HRL 074567, we concluded that the tablet paper was classifiable as writing paper in item 252.75, TSUS. While the above-mentioned evidence indicates only the actual use of the instant paper, we believe that the actual use is representative of the chief use of the class or kind of such paper.

Counsel's claim that "tablet paper" is a generic term used to mean paper weighing sixteen pounds or less does not seem to be supported by trade opinion. The American Paper Institute (API), which represents American primary level paper companies, states that it has "never heard the idea expressed that tablet paper was a generic term for paper under 16 pounds."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D3

074836

Several samples of the tablet paper were submitted to the American Paper Institute, which found that the apparent nominal basis weight for the sample was 15 pounds (per 17 inch by 22 inch, 500 sheet ream). The API states that "This is standard weight for grades such as tablet and form bond."

Counsel protests that the instant paper was imported in rolls and not in sheets, therefore Customs' reliance upon the fact that the basis weight was based upon a ream of paper 17 inches by 22 inches by 500 sheets is misplaced. Initially we note that counsel himself identified that particular ream as the one upon which the basis weight was based. Next we note that it is common practice in the paper industry to quote the basis weight of writing paper based on the weight of 500 sheets of paper measuring 17 inches by 22 inches, while printing paper weights are quoted on the basis of 500 sheets measuring 25 inches by 38 inches. While this is just one factor among many, it is interesting to note that the instant tablet paper's basis weight as quoted by counsel for the importer is based upon writing paper dimensions.

In the American Paper Institute's May, 1984, Supplement to the Dictionary of Paper, writing papers are discussed on page 1 as follows:

> They are usually used by an individual, within a company for correspondence, copying, computer output, or on a direct basis -- conducting business transactions. For some purposes horizontal lines, vertical lines and/or words may be printed on the form to facilitate its ultimate use, e.g., pre-printed business forms.

D4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

078836

> This printing generally does not impart complete information relative to the end use of the form. Rather, it can be considered to be only a guideline, framework or format for the specific data which is added later -- by pen, pencil, typewriter, automatic accounting equipment, copiers, computers, etc. (Emphasis added.)

In T.D. 72-207, concerning form bond paper, and Legal Determination 82-0071, concerning computer output forms, we said much the same thing.

The May, 1984, Supplement has the following to say regarding printing papers (on page 2):

> The products utilizing printing paper are generally sold in completed form, i.e., material is not added after the printing stage.... the material printed on the page is the sole purpose and intent of the document and imparts all knowledge to be gleaned, by itself, with no further addition.

All of the samples submitted in the HRL 074567 file fit into the category of writing paper, in which specific written data would be added later by pen, pencil, typewriter or some other means.

In the previous letter, counsel also argued that affidavits submitted by the importer and by another paper company executive established that the tablet paper was book and printing paper. We reviewed these letters, but we were not convinced that they proved the chief use of the instant paper to be other than writing paper, especially in light of Headnote 2(d), Schedule 2, Part 4, TSUS, which specifies that tablet paper is a writing paper.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

DS

074836

The instant paper was invoiced as tablet paper, it was used for tablets and other writing paper uses, it has a basis weight which is characteristic of tablet paper, its basis weight was invoiced in writing paper dimensions, and it is specifically defined as writing paper in Headnote 2(d), Part 4, Schedule 2, TSUS. We find that the instant paper is writing paper.

HOLDING:

The instant paper is classifiable as writing paper in item 252.75, TSUS. The inquirer should be informed of this ruling.

San Juan, Puerto Rico

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice No. 91/85; Puerto Rican Coffee Processed into Instant Coffee in California and Returned to Puerto Rico

This subject internal advice concerns the dutiability of wholly grown Puerto Rican green coffee sent to California to be processed into instant coffee, and thereafter returned to Puerto Rico.

In general, all coffee imported into the Customs Territory of the United States is accorded duty-free treatment whether green, roasted, ground, or instant in items 160.20, or 160.21, Tariff Schedules of the United States (TSUS). Additionally, the Commonwealth of Puerto Rico is considered to be part of the customs territory of the United States. General Headnote 2, TSUS. Under 19 U.S.C. 1319, the Commonwealth of Puerto Rico was granted the following authority by the Congress:

> The Legislature of Puerto Rico is empowered to impose Tariff duties upon coffee imported into Puerto Rico, including coffee grown in a foreign country coming into Puerto Rico from the United States....

Reference to the case of Porto Rico Brokerage Co., Inc. v. United States, 23 CCPA 16 (1935) provides an explanation of the legislative history as to intent of 19 U.S.C. 1319. Therein, the court stated:

> ...The Congress [U.S.] undoubtedly used the word "imported," standing alone, as meaning coffee brought into Puerto Rico from foreign countries, and, in order to include coffee brought into Puerto Rico from the United States, it used the words "coming into." Here the Congress clearly distinguished between the words "coming into" and the word "imported." When it referred to foreign commerce, it used the word "imported" and when it referred to products of continental United States, although grown in a foreign country, it used the words "coming into."

D7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The coffee is not "foreign grown" but is cultivated in the Commonwealth and transported to the United States for processing into instant coffee. As such, 19 U.S.C. 1319 does not authorize the assessment of duty upon the instant coffee when returned from the United States to the Commonwealth.

You have also inquired about coffee imported into Puerto Rico from beyond the Customs Territory of the United States in a "semi-roasted" condition. This coffee would be classified under item 160.10, TSUS, in Puerto Rico and then shipped to the United States for processing into instant coffee. It is our position that this product would be covered by 19 U.S.C. 1319. The coffee would never lose the identity of a foreign grown product and would be dutiable as coffee when returned to Puerto Rico even though it may have been manufactured into instant coffee in the United States.

The fact that Puerto Rico is not a member of the International Coffee Organization has no bearing on the questions raised in this internal advise.

FROM : Director, Classification and Value Division

SUBJECT: Difference of Opinion on Customs Form 6431

In your memorandum of February 20, 1986, you transferred the difference of opinion on Customs Form 6431 dated January 30, 1985, concerning the tariff classification of tub tender spa support systems manufactured in Canada and entered in 1984 at the port of Blaine, Washington. This matter is listed as the 14th difference on page 1 of CIE N 89/79, Suppl. No. 46, April 1986. Our decision follows:

ISSUE:

The sending port believes the merchandise is classifiable under the provision for electric water heaters in item 684.48, Tariff Schedules of the United States (TSUS), for which the 1984 column 1 rate of duty was 4.5 percent ad valorem, or alternately under the provision for electrical articles, not specially provided for (n.s.p.f.), in former item 688.43, TSUS, for which the 1984 column 1 rate of duty was also 4.5 percent. The national import specialists are of the opinion the merchandise is classifiable under the provision for household articles of iron or steel, n.s.p.f., in item 654.00, TSUS. The column 1 rate under that provision in 1984 was 5.3 percent ad valorem.

D9

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

FACTS:

The merchandise is a modular article containing all of the mechanical and electrical components for a spa of the type used in households. The module includes an electrical control panel with circuit breakers, a pump, a filtering system, a water heating system, and various valves for the control of flow through these components.

LAW AND ANALYSIS:

So long as this merchandise is in a configuration qualifying it as an entirety, we are of the opinion no single component performing only one of its multiple functions should control classification. Under Headnote 1(v), Part 5, Schedule 6, TSUS, the provisions for electrical articles, n.s.p.f., cannot take precedence over articles described by the provision for machines, n.s.p.f., in item 678.50, TSUS. When that provision becomes in competition with the provision for household articles, n.s.p.f., the latter must then prevail in accordance with the rule in Frank P. Dow Co. v. United States, 21 CCPA 282, T.D. 46819 (1933). For a more detailed discussion of the type of issues involved and other applicable precedents, see our protest review decision of May 14, 1982, file No. 068801.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

DNO

077858

HOLDING:

For the foregoing reasons, we find that the merchandise is properly classifiable under the provision for household articles of iron or steel, n.s.p.f., in item 654.00, TSUS.

New York Seaport Area
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005486

This protest was filed against your decision in the liquidation on January 27, 1984, of Entry No. 84-121482-2 dated December 19, 1983, covering a shipment of athletic footwear manufactured in Korea.

FACTS:

The nylon/leather athletic footwear involved was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States.

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Do the value breakdowns submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

The manufacturer's component value breakdowns reflect the following costs:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D12

071986

Style No. POG 6424 (P.O. 57154)

Misses' Joggers

Leather Cost	= $.9462	Rubber/plastic Costs	= $1.0624
Cutting	= .0317	Cutting	= .0205
Trimming	= .0141	Trimming	= .0124
Stitching	= .2286	Sole Labor	= .1301
Total Cost	= $1.2206	Stitching	= .0615
		Total Cost	= $1.2869

Style NOG 96423 (P.O. 57160)

Women's Joggers

Leather Cost	= $1.2435	Rubber/plastic Costs	= $.7436
Cutting	= .0372	Cutting	= .0110
Trimming	= .0157	Trimming	= .0086
Stitching	= .2314	Sole Labor	= .1309
Total Cost	= $1.5278	Stitching	= .0683
		Total Cost	= $.9624

A review of the cost breakdown for the misses' joggers P.O. 57154 shows that the value of the rubber/plastics components exceeds the value of the leather components. Consequently, classification of these joggers under item 700.95, TSUS, was appropriate.

A review of the cost breakdown for the women's joggers coverd by P.O. 57160 shows that the value of the leather components exceeds the cost of the rubber/plastics components. We do not have a laboratory report or other tangible evidence which would permit us to refute the leather costs shown on the breakdown. Consequently, the 4800 pairs of women's joggers should have been classified under item 700.45, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D13

HOLDING:

The protest is denied in part as to the footwear designated as misses' joggers P.O. 57154 and allowed in part as to the footwear designated as women's joggers P.O. 57160. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-008250

This protest was filed against your decision in the liquidation on March 16, 1984, of entry No. 83-357614-1 dated February 22, 1983, covering a shipment of athletic footwear produced in Korea.

FACTS:

Certain nylon/leather athletic shoes were classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the footwear is in chief value of leather which requires classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Does the documentation provided by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

At the time of entry the manufacturer's component value breakdown was submitted on shoes covered by Order No. 733, Stock No. 18733. Your footwear team subsequently requested by CF 28 component breakdowns on footwear covered by the other stock numbers included in this shipment. However, the requested value breakdowns were not submitted.

E1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The component value breakdown submitted shows a value of $1.1854 for the leather components against a value of $1.049 for the rubber/plastics components. We have no tangible evidence which indicates that this cost breakdown is erroneous. Therefore, the 2,412 pairs constituting the Men's Order No. 0733 and the 3600 pairs constituting the Men's Order No. 739, both of which are Stock No. 18733 are in chief value of leather which requires their classification under item 700.35, TSUS, as other footwear, of leather, for men, youths and boys.

Inasmuch as the value breakdowns covering the remaining stock numbers were not submitted in response to your request, it is our position that classification of these shoes under item 700.95, TSUS, was appropriate.

HOLDING:

The protest is allowed in part as to those shoes covered by Order Nos. 733 and 739 and denied in part as to those shoes covered by the remaining stock numbers. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffer

Area Director of Customs
New York Seaport Area
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-006878

This protest was filed against your decisions in the liquidation on June 11, 1982, of entry No. 81-188238-1 dated July 1, 1981, in the liquidation on October 1, 1982, of entry No. 81-188341-6 dated July 14, 1981, and in the liquidation on September 2, 1983, of entry No. 82-876453-1 dated July 9, 1982.

FACTS:

Certain nylon/leather athletic footwear was classified in liquidation under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the entry papers submitted show that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Should the cost breakdowns submitted by the protestant showing the footwear to be in chief value of leather be accepted?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has

E3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on this matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

Entry No. 82-876453-1 included 2,574 pairs of women's nylon/leather joggers, Order 1081, Pattern EKEF0508. The manufacturer's component value breakdown shows a leather cost of $1.33 against a cost of $1.12 for the rubber/plastics components. There are also included 1,188 pairs of youths' nylon/leather joggers, Order 1084, Pattern EKEF1108. The manufacturer's component value breakdown for this style shows a leather cost as $1.17 and a cost of $1.01 for the rubber/plastics components. We have no information which would contradict the component values submitted by the manufacturer. Therefore, these joggers being in chief value of leather should be reliquidated under item 700.45, TSUS, including the youths' sizes which should be treated as unisex.

Entry No. 81-188341-6 covers 3,420 pairs of men's/boys nylon/leather joggers. The component value breakdown covering the men's sizes shows 1.46 sq. ft. present in the shoes per pair, whereas the Customs laboratory report on a man's size 9 style 1008 shows 0.457 sq. ft. or 0.914 sq. ft. per pair. Based on the laboratory report the leather cost is adjusted as follows:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E4

898 LLQ

$\frac{.914}{1.46}$ = 626 x 1.48 = .927
.14 cutting and trimming
$1.067 leather costs
Rubber/plastics costs = 1.22

In view of the foregoing, it is our position that classification of the men's sizes under item 700.95, TSUS, is correct. However, the 1,920 pairs of boys' sizes should be reliquidated under item 700.35, TSUS, since this appears to be a completely different shoe based on the price. Also, we have no "tangible evidence" that the figures submitted by the manufacturer are erroneous.

Entry No. 81-188238-1 covers 17,000 pairs of men's and boys' nylon/leather joggers which were originally priced from the factory at $8.26 per pair. However, because of defects the factory reduced the price to $5.00 per pair. The manufacturer's component value breakdown shows leather costs at $1.95 against $2.67 for the rubber plastics costs. It is our position based on the manufacturer's cost breakdown that classification under item 700.95, TSUS, was correct.

HOLDING:

The protest should be allowed as to that footwear covered by entry No. 82-876453-1 and the 1,920 pairs of boy's nylon/leather joggers covered by entry No. 81-188341-6. The protest should be denied as to that footwear covered by entry No. 81-1882381-1 and the 1,500 pairs of men's/boys nylon/leather joggers covered by entry No. 81-188341-6.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON, D.C. 20229

MAY 14 1986

REFER TO

CLA-2:CO:R:CV:G
077872 SM

Mr. D. S. Rana
Commercial Attache
Embassy of India
2536 Massachusetts Ave., N.W.
Washington, D.C. 20008

Dear Mr. Rana:

This letter is in response to your inquiry of February 19, 1986, addressed to William Marchi, on behalf of Nataraj Fashions, Inc. This firm imported a shipment of garments, claimed to be vests, that the Import Specialist at the New York Seaport classified as sleeveless blouses. No explanation is given for the proposed classification as vests.

Three samples were sent; one is unmarked, while the others are labeled style 691 and 692, respectively. All are of lightweight woven fabric, labeled 100 percent cotton; all are sleeveless and unlined. Style 691 is a blouson style; it hangs to the hip and has a drawstring encased in a band of self fabric around the bottom. It is formed of three horizontal panels across the back and three on each side of the full-front seven-button opening. One strip of woven 3/4 inch wide woven twill tape forms the placket on the left side; the buttonholes are worked through it. Another strip of tape is inserted between the top and middle front panels. A tab of the same tape buttons over each of the inserted breast pockets. The garment also has pockets with slant openings at the waist, and a collar band.

Style 692 has a full-front, five-button opening and a convertible-type collar. A self-fabric band encircles the bottom and is gathered with elastic along the back. The fabric of the garment is gathered into a yoke at the front and pleated into it at the back. Various pockets with buttons and a zipper cover the front in the area between the lower edge of the armhole and the top of the band at the waist. Epaulets and a decorative fabric loop stitched into the seam of one of

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E7

the pockets constitute ornamentation, since this is clearly not the type of garment on which epaulets serve a primarily functional purpose.

The sample for which no style number is given is white, with a convertible-type collar, a full-front opening with four snaps, and two patch breast pockets. At the back waist the garment is gathered with elastic; two snap tabs allow for adjustment of the fit of the waist.

Rough sketches of the garments are enclosed.

A vest is normally worn over another outer garment. See, for example, ruling 074584 of December 13, 1984. It is generally a short garment, reaching to the waist, without sleeves, buttoning down the front, and may be worn under another garment, such as a suit jacket. See T.D. 78-205. A judgment as to what an article of apparel is for tariff purposes, such as a coat or jacket, blouse or shirt, will be made in the individual case, based on such factors as the cut, overall appearance, style, and weight. See ruling 039454 of May 9, 1975.

Examination of the three submitted samples indicates that none can be properly classified as a vest. The elastic and drawstring make gathers that would be too bulky if any of the garments were worn under a jacket. All three garments lack the deep V neckline and oversized armholes that often characterize vests. Rather, each is styled in such a way as to provide adequate coverage if worn alone next to the skin or over underwear, without another blouse or shirt. In fact, given the fit of the collars and armholes in particular, they would probably be uncomfortable if worn over other outer garments. Since they are designed for women's wear and adequately cover the neck-to-waist area, they are properly characterized as blouses, and classifiable as such.

The unnumbered, white garment and style 691 are classifiable under item 384.4609, Tariff Schedules of the United States, Annotated (TSUSA), quota category 341, as women's cotton blouses, not knit, not ornamented. Style 692

Mr. D. S. Rana
Commercial Attache
Embassy of India
2536 Massachusetts Ave., N.W.
Washington, D.C. 20008

Dear Mr. Rana:

This letter is in response to your inquiry of February 19, 1986, addressed to William Marchi, on behalf of Delhi York, Inc. This firm imported a shipment claimed to be quota-exempt India items, specifically abas, that were determined by New York Customs to be dresses subject to quota.

The submitted sample of style DU-002 is a 100 percent cotton woven knee-length women's dress. It has a gathered skirt stitched to a wide-cut bodice, no sleeves, a jewel neckline, and a self-fabric tie belt 1-1/4 inches wide. The neckline, armhole edges, and bottom edge are scalloped and embroidered; the front bodice is embroidered and beaded.

Under paragraph 6 of the current bilateral Agreement concerning Trade in Cotton, Wool and Man-Made Fiber Textiles and Textile Products, "India Items" conforming to the descriptions set out in Annex D to the Agreement are not subject to the restrictions of the Agreement. Annex D defines "India Items" as "traditional folklore handicraft textiles products made in the cottage industry. They comprise clothes . . . whose shape and design are traditionally and historically Indian." It further defines an aba as "an over-garment close-fit at the upper part with a Ghagra type skirt touching the ankles." A ghagra is defined as "an ankle-length very wide skirt with drawstring or hooks at the waist."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E/O

Examination of the submitted sample reveals that it does not conform to the definitions set out in Annex D of the Agreement, principally in that it lacks a wide, ankle-length skirt with drawstring or hooks at the waist.

Since the garment is not an aba according to the terms of the Agreement, it cannot be exempted from applicable quotas. We concur with the decision of the Import Specialist that this article is properly classifiable as an ornamented dress of cotton, not knit, under item 384.0905, Tariff Schedules of the United States Annotated (TSUSA). This item corresponds to quota category 336.

Sincerely,

Harvey B. Fox

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 101/85 of December 11, 1985, Concerning Whether Neck and Waist Tabs of Men's Jacket Style No. 501 Constitute Ornamentation

This request was initiated by Brownstein, Zeidman and Schomer on behalf of Winer Industries, Inc. The jacket in question, produced in Macau, is claimed by the importer to be a ski jacket, although it is not made of fabric, such as nylon, normally associated with ski wear. It is made of a wholly cotton woven outer shell, a woven man-made fiber lining, and a middle layer of a man-made fiber batting. It has long sleeves; elasticized cuffs and waist; a full front zippered opening; a 3-1/2 inch by 1-3/4 inch rectangular woven twill tab stitched to the bottom of the right quarter panel, secured to the left quarter panel by a single metal snap; and a 4 by 4-1/4 inch rectangular piece of doubled fabric, matching the outer shell material, stitched just below the collar on the left quarter panel, which attaches to the right quarter panel by means of two metal snaps. Since the only features in question are the 4 by 4-1/4 inch fabric piece and the 3-1/2 by 1-3/4 inch tab, a further description of the garment is not necessary.

The importer claims that the jacket is properly classified under item 379.46, Tariff Schedules of the United States (TSUS) (now item 381.47, TSUS), as other men's or boys' wearing apparel, not ornamented, of cotton, not knit, coats, valued over $4 each, other. You have classified it under item 379.06, TSUS (now item 381.05, TSUS), as other men's and boys' wearing apparel, ornamented, of cotton, other, not knit, coats. We are in agreement with your position.

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The importer claims that the twill tab at the waist and the fabric piece at the neck have the primarily functional purpose of tightening the jacket at the top and bottom to prevent cold and wind from getting inside and body heat from escaping. However, the jacket can be fully closed by means of the zipper, and examination shows that the two pieces are not adjustable and do not tighten the jacket in any way. As they are of lightweight fabric and cover only six inches of the zipper's 22 inch length, they do not provide any significant protection against cold and wind.

The importer also claims that the tabs do not embellish, adorn, or decorate the jacket, as they are of the same fabric and color as the rest of the jacket and have the same type of stitching. In fact, the tab at the waist is of a woven twill tape and is not of the same fabric as the shell. In any case, the tabs are prominently located on the center front and enhance the appearance of the garment viewed as a whole. The fact that the textile fabric piece at the top of the zipper is of the same fabric as the shell does not preclude it from being ornamentation. Headnote 3 of Schedule 3 provides that textile fabric can serve as ornamentation. It is our view that the decorativeness of the two fabric pieces outweighs any functional purpose they may serve. In line with IA 79/84, which determined that a neck strap that made no difference in the fit of a men's jacket collar was ornamental, the jacket is properly classified under item 379.06, TSUS (now item 381.05, TSUS).

You should advise the inquirer of this decision.

Mr. John M. Fleming
Rayco Tennis Products
1386 La Mancha Place
Chula Vista, California 92010

Dear Mr. Fleming:

In a letter dated February 18, 1986, you state an understanding that an 11 meter package of tennis racket string is classifiable under the provision for other lawn tennis equipment in item 734.88, Tariff Schedules of the United States (TSUS), while a 200 meter package of tennis racket string is classifiable as cordage of man-made fiber in item 316.60, TSUS. (item 316.60, TSUS, has been replaced by item 316.55, TSUS, and item 316.58, TSUS).

Specifically, you ask that we issue a ruling classifying both the 11 meter package and the 200 meter package under item 734.88, TSUS.

The reason why tennis strings of man-made material in 11 meter lengths and such strings in 200 meter lengths are treated differently for tariff purposes is found in the case of Lyons Export & Import Inc. v. United States, 65 Cust. Ct. 394, C.D. 4111 (1970). The merchandise involved in that case was tennis strings imported in coils 660 feet long, wound on plastic reels. The court in reaching its decision stated that "racket strings of man-made fibers classifiable under Schedule 7, Part 5D, are limited to those put up and packaged for retail sale * * * we conclude that it was the intent of Congress that tennis racket strings of man-made fiber put up and packaged for retail sale be classified under item 734.88 (Schedule 7, Part 5D), as other lawn tennis equipment and parts, and that tennis racket strings of man-made fiber, not so packaged, be classified under item 316.60, as cordage of man-made fiber."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E14

According to information before this office, only standard lengths are pre-cut and packaged individually for retail sale. These lengths are 33 feet, 34 feet, 35 feet, 36 feet and in sets of 22 feet by 11 feet. These lengths are classifiable under the provision for other lawn tennis equipment in item 734.88, TSUS, and dutiable at the rate of 3.2 percent ad valorem.

In view of the foregoing it is our position that tennis racket string in 200 meter lengths is precluded from classification under item 734.88, TSUS. In the absence of a sample of the tennis racket string involved we cannot advise you definitely as to its dutiable status. However, tennis racket string of man-made fiber in 200 meter lengths is dutiable at the rate of 2 cents per pound plus 9.2 percent ad valorem under item 316.55, TSUS, if measuring under 3/16 inch in diameter or at the rate of 12.5 cents per pound plus 15 percent ad valorem under item 316.58, TSUS, if measuring 3/16 inch or over in diameter.

Sincerely,

Arthur P. Scheffler

Area Director of Customs
New York Seaport Area
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-5-003939

This protest was filed against your decision in the liquidation on March 22, 1985, of entry No. 85-215949 dated October 10, 1984, covering a shipment of vinyl suit covers manufactured in Taiwan.

The merchandise involved consists of two PVC garment bags. Style No. 40 A/B is described on the invoice as being 3 mil. thick vinyl and measuring 24 inches by 40 inches with a 34 inch zipper. The PVC material is embossed to impart a nylon taffeta finish. This bag is designed to contain one or two garments while being carried by a clothes hanger. It is also intended to protect the contents.

Style No. 44/ZJCP is described on the invoice as being 4 mil. thick vinyl and measuring 24 inches by 43 inches with a 9 inch bottom flap. The PVC material is embossed to impart a nylon taffeta finish. This article has a gusset hanger opening on both ends and a business card clear view window pocket on the front. The bag is designed so that the clothes hanger can be inserted through the gusset openings and one end is tucked under the 9 inch flap thus facilitating carrying the bag.

The protestant claims that identical styles were the subject of Headquarters Ruling Letter (HRL) No. 075785 dated March 19, 1985. In that ruling style Nos. 40/T and 44/ZJCP were held to be classifiable under the provision for other household articles, not specially provided for, of rubber or plastics in item 772.15, TSUS.

It is our position that the classification of the instant styles is controlled by the decision rendered in HRL 075785 dated March 19 , 1985. However, we are currently reviewing the correctness of that decision.

The protest should be allowed. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

077902

TO : District Director of Customs
Buffalo, New York 14202-2378

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice No. 6/86 Concerning the Tariff Classification of Cesium Iodide/Thallium Iodide Crystals Used in Nuclear Studies

The subject internal advice request was initiated by the Laboratory of Nuclear Studies, Cornell University, in a letter dated December 19, 1985. This merchandise may be made in either Japan or Great Britain. Our decision follows:

ISSUE:

The Customs Service presently proposes classifying the merchandise under the provision for parts of electrical measuring, checking, analyzing or automatically-controlling instruments and apparatus in item 712.49, Tariff Schedules of the United States (TSUS). The current column 1 rate of duty under that provision, applicable to products of the above-identified exporting countries, is 5.5 percent ad valorem. The IA applicant contends the merchandise is rather covered by the provision for mixtures of two or more inorganic compounds other than those more specifically described, in item 423.96, TSUS. The current column 1 rate of duty under that provision is 0.6 percent ad valorem.

FACTS:

The crystals at issue are made from their constituent compounds, cesium iodide and thallium iodide in powder form, in a manufacturing process which involves the slow cooling of a molten substance over the course of 3 to 4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

weeks. The crystals which are thus formed are sawed and ground into rectangular or trapezoidal bars which are also polished. The bars are then "wrapped" in teflon and aluminized mylar. After importation, they are glued to photoelectric detectors which are arranged in apparatus for the measurement of both the direction and intensity of energy from electron and positron collisions. The collisions produce photons causing the emission of green light from the crystals. The light is conducted to the detectors.

207902

LAW AND ANALYSIS:

The main point made by the IA applicant is that item 423.96 is a specific provision for the crystals which must prevail over a parts provision in accordance with General Headnote 10(ij), TSUS. That rule of construction states:

> [U]nless the context requires otherwise, a tariff description for an article covers a product solely or chiefly used as a part of such article, but does not prevail over a specific provision for such part.

Of the various methods for describing merchandise in the TSUS, one is by the component material of which the merchandise is in chief value. The provisions in Schedule 4, TSUS, where item 423.96 appears, generally do not represent descriptions of that type, but rather are descriptions of chemicals and related substances in material form. Therefore, tariff descriptions in Schedule 4 and elsewhere in the TSUS for chemicals and merchandise in other material forms would seldom, if ever, constitute specific provisions in competition with parts provisions. See, for example, Amersham Corporation v. United States, 5 CIT 49 (1983), where it was held that merchandise was not described by the Schedule 4 provision under which it was claimed to be classifiable and was rather classifiable under a parts provision since General Headnote 10(ij) was, therefore, not applicable.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The Schedule 4 provision was not applicable because the merchandise was advanced beyond the stage of a chemical or related substance. In our opinion, the instant crystals also represent merchandise advanced beyond the stage of a chemical mixture and represent articles made from chemicals. In addition to the cutting, grinding and polishing operations which take place before importation, the articles also include the so-called wrapping. Even though that may represent a small portion of the total cost, it further demonstrates that an article rather than a chemical mixture is involved. Accordingly, the IA applicant's contention that the merchandise is described by item 423.96 is not sustainable.

While various legal precedents and legislative history have been called to our attention for an opposite conclusion, we do not agree those authorities are dispositive of the issues here. For example, West Coast Glass Distributors v. United States, 62 Cust. Ct. 444, C.D. 3797 (1968), relied on by the IA applicant, does not illustrate the preference for a materials provision over a parts provision under General Headnote 10(ij) as claimed. In that matter, the court stated that the prevailing "provision for laminated glass, shaped, manifestly provides for more than the material itself." Id. at 447.

With respect to Pacific Hardware Sales Co. v. United States, 64 Cust. Ct. 68, C.D. 3960 (1970), cited for the same premise, the merchandise in litigation represented an unfinished article and only qualified as a part under a parts provision by applying the rule in General Headnote 10(h), TSUS. That headnote states that a tariff provision includes an article "whether finished or not finished." Therefore, contrary to the inferences drawn from that matter, the decision rather is an example of the rule that merchandise which is described by a tariff provision in its condition as

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

imported will not be classified under a provision which describes it in terms of its condition after future further advancement. In the instant situation, the crystals are imported in a finished condition, and they do not become the articles suitable for the purpose intended by any manufacturing operations accomplished after importation other than assembly to the parts they will be used with.

The larger apparatus in which the instant articles are installed as components, as described in the submissions in this matter, would be classifiable, if imported, under item 712.49. Accordingly, the use of the crystals as components in that apparatus warrants their classification under the parts portion of that provision. It should be further noted that under 15 CFR 301.2(k), articles used as components or parts are generally not eligible for an exemption from duty under the free-rate provision for certain scientific instruments imported for the use of educational institutions in item 851.60, TSUS.

HOLDING:

For the foregoing reasons, we find that the cesium iodide/thallium iodide crystals in question are properly classifiable under the provision for parts of electrical measuring, checking, analyzing or automatically-controlling instruments and apparatus in item 712.49, TSUS. Please provide the IA applicant with a copy of this decision.

Harvey B. Fox

Mr. Roland Rock
Nippon Express U.S.A., Inc.
2481 South Wolf Road
Des Plaines, Illinois 60018

Dear Mr. Rock:

This is in response to your letter of January 19, 1986, submitted on behalf of TDK Corporation of America, requesting a binding ruling on the tariff classification of three electrodes (Style Nos. MEL-08, MEL-09, and MEL-11). The electrodes, functioning as electrical conductors, are used to transmit signals produced by the human heart to an electro-cardiograph machine. They are comprised of a conductive gel (which makes contact with the skin) and a ferrite substrate which are sandwiched around a silver/silver chloride layer. The layers are enclosed in a plastic frame. The products are designed to hold a lead wire with a magnetic catch. The electrodes are manufactured in Japan.

You contend that the electrodes are most properly classifiable as medical apparatus (including electro-medical apparatus) and parts thereof: Other, other, under the provisions of item 709.17, Tariff Schedules of the United States (TSUS), dutiable at the rate of 4.4 percent ad valorem. This claim is based on the fact that the electrodes are dedicated for use with electro-cardiograph machines. Customs currently classifies like articles as other electrical apparatus for making or breaking electrical circuits; and parts thereof, under the provisions of item 685.90, TSUS, dutiable at the rate of 5.7 percent ad valorem.

Classification of electrodes used in transmitting signals to electro-cardiograph machines is well settled. The electrodes serve to make connections in an electrical circuit. As such, they are more specifically provided for under item 685.90, TSUS, as apparatus for making or breaking electrical circuits, rather than as parts of an electro-cardiograph machine under item 709.17, TSUS. See Customs Ruling Letter

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

58

dated February 5, 1973 (Control No. 024464), Customs Ruling Letter dated August 7, 1974 (Control No. 035323), Customs Ruling Letter of August 10, 1979 (Control No. 062436) affirmed on reconsideration in Customs Ruling Letters dated January 19, 1981 (Control No. 063573) and November 6, 1981 (Control No. 067262).

In light of the clear precedent, the electrodes are classifiable as other electrical apparatus for making or breaking electrical circuits under the provisions of item 685.90, TSUS, dutiable at the rate of 5.7 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Mary Ann Ost
H. Z. Bernstein Co., Inc.
Suite 1973
1 World Trade Center
New York, New York 10048

Dear Ms. Ost:

You have requested a tariff classification ruling on behalf of Direct Import Corporation of America for two moon boots from Italy: Style 153, "Olympia," and Style 22, "Alfa." A new sample of each has been submitted to Customs Headquarters.

Both boots are of man-made materials. Style 153, which stands about 13-1/2 inches tall, has a light grey "upper" folded to the inside to a depth of about three inches and stitched into the lining. It has an expandable opening, fastened with three Velcro strips that pass through three white plastic loops. A grey molded sole, into which the "upper" is stitched, extends up over the toe and sides and about 3-1/4 inches up the back. Superimposed over the grey sidewall by a double injection process is a dark blue band of varying width that encircles the entire boot. A dark blue injection also covers most of the outsole, except for some cut-out areas where the grey is visible; it extends up the side of the boot for about 1/2 inch all around, except for about 2-1/2 inches along the instep area on both sides. At the instep area, three 1/4 inch wide blue strips extend upward from the outsole and connect with the encircling blue band. Elsewhere, there is a gap of about 1/8 inch between the encircling blue band and the blue upward extension of the outsole.

Style 22, which has a removable lining, stands about 11 inches tall. The "upper" is elasticized where it would fit around the leg; it is black, encircled by two diagonal bands in contrasting shades of grey, and is stitched into a molded all-black, single injection sole extending up over the toe and about three inches up the back.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F10

The issue for tariff classification purposes is whether each boot has a foxing or a foxing-like band applied or molded at the sole and overlapping the upper. If not, each would be properly classifiable under item 700.56, Tariff Schedules of the United States (TSUS).

The Customs Service's position on the interpretation of the terms "foxing or a foxing-like band" in the footwear provisions of the TSUS was set out in T.D. 83-116. There a foxing was described as a separate strip of material securing the joint between the sole and the upper. There is no such strip on either of the two boot styles under consideration here.

As to a foxing-like band, while T.D. 83-116 indicates that something molded to look like a foxing can be a foxing-like band even if it performs no function, it also requires that for a design feature in the form of a band to be considered a foxing-like band, it must be applied or molded at the sole and overlap the upper. Unit-molded footwear will be considered to have a foxing-like band if a vertical overlap of 1/4 inch or more exists from where the upper and the outsole initially meet. A foxing-like band must also encircle or substantially encircle the entire shoe.

On Style 153, a dark blue band of varying width does encircle the entire boot. However, it is positioned above the point where the foot would rest. Thus, it is in fact part of the upper. It does not cover the juncture of the upper and the sole. It does not "overlap the upper." The blue portion of the outsole that extends 1/2 inch up the sides is below the point where the foot would rest and so it does not overlap the upper, either, although it is molded at the sole. Thus, no design feature on Style 153 fits the description of a foxing-like band.

The single-injection, single-color Style 22 also lacks any feature that can be described as a foxing-like band. Thus, assuming all other statutory conditions are met, both styles are classifiable under item 700.56, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077912

You should attach a copy of this ruling letter to the documents filed with the appropriate Customs Service field officer in connection with the importation of these boots.

Sincerely,

Arthur P. Schaffner

Ms. Rosalie M. Henrich
Import Manager
Harris Systems, Inc.
7500 North St. Louis Avenue
Skokie, Illinois 60076

Dear Ms. Henrich:

You have requested a tariff classification ruling for two carpets that you plan to import from Greece. You do not state what the carpets are made of or how they are made, but you have sent two samples to our New York office.

You state that the carpets are fire-retardant so that they can be used in front of a fireplace. Further information is provided by our National Import Specialist, who indicates that they are composed of woven wool fibers. One carpet (item B) measures approximately 25-1/2 by 53 inches and has a tufted deep pile surface with fringes on four sides. The other carpet (item K) measures approximately 23 by 59 inches and has a cut deep pile surface with fringes on four sides.

Subpart A of Part 5, Schedule 3, Tariff Schedules of the United States (TSUS), provides for "textile floor coverings". Your carpets, composed of woven wool fibers, are in chief value of textile material. Even if the backing holding the pile in place is of rubber, plastics, or other nontextile material, by Headnote 3 to Subpart A that fact will not be taken into consideration in determining the component material of chief value.

Headnote 2(a) of Subpart A defines the term "floor coverings" to include "carpets ... of any size or shape ... suitable for use as floor coverings in homes, business establishments, institutions, vehicles, or elsewhere...." The words "suitable for use" as applied in Customs law mean actually, practically, and commercially fit for such use. Such suitability does not require that the merchandise be chiefly used for the stated purpose, but it does require more than evidence of a casual, incidental, exceptional, or possible use. Keer, Maurer Co. v. United States, 46 CCPA 110, 114, C.A.D. 710 (1959), and cases cited therein.

F13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

You state that the carpets are to be sold for use in front of hearths of fireplaces. Information provided to our National Import Specialist by those in the trade and some users of hearth rugs indicates that users having an existing floor covering would place a hearth rug over that covering in the area of the hearth. Individuals without floor coverings would place the hearth rug before the hearth to protect the floor. Thus, the carpets are not merely casually, incidentally, or exceptionally used as floor coverings, but in fact are actually, practically, and commercially fit for such use, as the statute requires. The fact that they are chemically treated so as to be flame retardant in order to protect a floor or existing floor covering from sparks or glowing embers does not make them any less suitable for use as floor coverings or any less classifiable under the textile floor coverings provisions. Many types of rugs or carpets serve to protect floors. Headnote 1 of Subpart A specifically excludes from that subpart only floor coverings of unspun fibrous vegetable materials, linoleum and other nontextile floor coverings, and rugs or carpets over 100 years old.

For the foregoing reasons, your carpets are properly classifiable in Part 5A of Schedule 3, under the provisions for floor coverings of pile or tufted construction, of textile materials, according to the method of construction. A copy of the applicable provisions is enclosed for your information. Column 1 rates apply to products of Greece.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

This ruling concerns the classification of certain men's garments.

ISSUE:

The issue presented is whether the subject garments are shorts and, therefore, classifiable in item 381.6210, Tariff Schedules of the United States Annotated (TSUSA), with a textile and apparel category designation of 347, or whether the garments are swimwear, classifiable in item 381.6585, TSUS, with a textile and apparel category designation of 359.

FACTS:

Four samples (styles 5446, 5E856, 16T440, and 16T438) were submitted. Each short length boxer style garment is meant to be worn below the waist by males and is made from a fairly lightweight poplin fabric that is either wholly cotton or a 60 percent cotton/40 percent polyester blend. Each sample has a full substantial knit man-made fiber liner securely fastened on the inside of the garment; a fully elasticized waistband with a drawstring; an inserted pocket at each side seam with a button-type hole cut and stitched around the edges to allow water to escape from the pocket; a small inner change-type pocket made from the same fabric as the liner, with an overlapping flap top; and a rear inserted pocket with either a zipper closure or a pocket flap secured with a fabric closure. One sample is a single color, two samples are pieced together so that the lower and upper halves are different colors, and the last garment is similar to the bicolored samples, except that the waistband is a third color. On the tricolor sample, the drawstring ties on the outside of the waistband.

G1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

LAW AND ANALYSIS:

In our ruling of February 17, 1984, 077387, Customs set out criteria for making the distinction between swimwear and shorts. In that ruling, we stated:

> In determining whether a garment falls within the purview of swimwear and would not, therefore, be classified as shorts, if a question concerning the commercial identity of the garment arises, Customs will look to the following features.
>
> (1) Fabric from which the garment is made. Fabrics such as denims, corduroys, and twills are usually heavier fabrics than used in normal swimwear. Such fabrics are bulkier and absorb more water than is usually desirable for swimwear.
>
> (2) Side inserted pockets are usually a characteristic of shorts and not swimwear. In addition, the extra fabric required adds to the water absorbancy of the garment.
>
> (3) Cotton liners, again because of increased water absorbancy, are more often found on multipurpose or running shorts.
>
> (4) A fly front is not a normal feature on swimwear.
>
> The weight and absorbancy of the fabric of each garment in question is the primary criterion and may be determinative by itself. None of the other features are necessarily determinative by themselves, or even in combination. Each article of apparel should be considered as a whole and, due to the specific nature of swimwear, if a garment is not readily identifiable swimwear, it is a multipurpose garment and should be classified as shorts.

The above criteria were intended to assist Customs in determining whether particular garments were commonly or commercially known as swimwear and, therefore, classifiable as such rather than as shorts. Applying that criteria to the instant samples, we find that those garments are swimwear.

If it were not for the side inserted pockets, there apparently would be no question on the classification of these garments: the fabric is normal for men's or boys' swimsuits; the liner is lightweight,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

nonabsorbable, and substantial; the waistband, drawstring, and inside pocket are normal features for swimsuits; and the rear inserted pockets with closures have become an accepted swimsuit feature. In view of this, the side pockets, which are made of lightweight, nonabsorbable fabric, and which have special water holes cut into them, are not sufficient, by themselves, to cause the samples to fall within the class or kind of garments commonly and commercially known as shorts (as opposed to swim trunks).

HOLDING:

The sample garments described above are properly classifiable under the provision for other men's or boys' cotton wearing apparel, not ornamented and not knit, in item 381.6585, TSUSA, with a textile and apparel category designation of 359.

Area Director of Customs
6 World Trade Center
New York, New York 10048

Dear Sir:

Enclosed for your information is a ruling on men's swimwear garments with three exterior pockets. Our intention in issuing that ruling is to clarify a prior ruling of March 4, 1985, 074920, from this office. That ruling held that certain garments with three exterior pockets were not classifiable as swimwear.

In our ruling of February 17, 1984, 077387, we provided criteria for making the distinction between swimwear and shorts. In that ruling, we stated:

> In determining whether a garment falls within the purview of swimwear and would not, therefore, be classified as shorts, if a question concerning the commercial identity of the garment arises, Customs will look to the following features.
>
> (1) Fabric from which the garment is made. Fabrics such as denims, corduroys, and twills are usually heavier fabrics than used in normal swimwear. Such fabrics are bulkier and absorb more water than is usually desirable for swimwear.
>
> (2) Side inserted pockets are usually a characteristic of shorts and not swimwear. In addition, the extra fabric required adds to the water absorbancy of the garment.
>
> (3) Cotton liners, again because of increased water absorbancy, are more often found on multipurpose or running shorts.
>
> (4) A fly front is not a formal feature on swimwear.
>
> The weight and absorbancy of the fabric of each garment in question is the primary criterion and may be determinative by itself. None of the other features are necessarily determinative by themselves, or even in combination. Each article of apparel should be considered as a whole and, due to the specific nature of swimwear, if a garment is not readily identifiable as swimwear, it is a multipurpose garment and should be classified as shorts.

G4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The above criteria were specifically intended to assist our import specialists in determining whether garments fall within the class or kind of apparel commonly and commercially known as swimwear.

In our ruling of March 4, 1985, after quoting the above criteria, the statement was made, "Applying that criteria to the garments you submitted, we find the tariff classification to be determined by the presence (or lack thereof) of the side inserted pockets."

It has now come to our attention that the National Import Specialist having the responsibility for men's swimwear has interpreted our ruling of March 4, 1985, as establishing a "three pocket" rule — that three exterior pockets on a garment automatically precludes that garment's classification as swimwear. This has been confirmed by a phone conversation with the concerned NIS.

While we can appreciate the difficulties encountered in determining whether certain garments are classifiable as shorts or as swimwear, and the administrative convenience of a "three pocket rule," such a rule is clearly contrary to our ruling of February 17, 1984, and is not supported by the ruling of March 4, 1985. The ruling of February 17, 1984, specifically stated that only the weight and absorbancy of the fabric of each garment may be determinative by itself. If the weight and absorbancy of the fabric of a garment is not determinative, the garment should be considered as a whole and, barring the unusual, only a combination of the other features on a garment should be determinative. A "three pocket rule" ignores the requirement of commercial identity, and, in our view, would not be legally defensible if the matter were presented for judicial adjudication.

In addition, our ruling of March 4, 1985, does not support the establishment of a "three pocket rule." That ruling first quoted the above criteria, and, immediately thereafter, stated, "Applying that criteria to the garments you submitted." Taken in context, it is obvious that Headquarters did apply the criteria specified and found that the three open pockets on two of the garments were enough, in combination with other features (e.g., the weight of the fabric), to cause those garments to be multipurpose shorts.

The quoted criteria are, in fact, guidelines and should be judiciously applied to individual garments. Accordingly, similar garments may be classified differently, depending on their individual characteristics. We recognize that this approach may require difficult decisions and,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC_____

057924

65

occasionally, result in nonuniform classification decisions. However, any standard which, on its face, ignores the commercial identity of an article, where ascertaining that identity is essential for classification purposes, is certain to be struck down by the courts.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. June Mahoney
National Distributors Corp.
P.O. Box 20155
DAG Hammerskjold Plaza
New York, New York 10017

Dear Ms. Mahoney:

In your letter of January 27, 1986, you request a tariff classification of a "cat bed" from the People's Republic of China. You did not submit a sample along with your letter.

We are informed by our New York office, which saw a sample of the merchandise, that the "cat bed" is similar in shape to a miniature house. It is 21 inches in length, 14 inches in width and 12 inches in height. It has an iron frame covered by a cotton canvas cloth with padding. There is a nylon mesh covering the opening to the "bed" or house. Our New York office tells us that the nylon mesh can be rolled up and down like venetian blinds. Inside there is a foam mattress that is covered with cotton canvas.

A value breakdown submitted along with this merchandise states that the cloth cover and inside padding is worth $7.50, while the frame of the "bed" is worth $3.50.

The "cat bed" is classifiable according to its component of chief value. Inasmuch as we do not have a complete value breakdown before us, we assume that the "bed" is in chief value of woven cotton fabric. We also assume that the item is not ornamented. If these assumptions are correct, then the "cat bed" is classifiable under the provision for articles not specially provid 1 for, of textile materials, other articles, not ornamented, of cotton, other, other, in item 386.53, Tariff Schedules of the United States (TSUS), dutiable at the 1986 Column 1 rate of 8.2 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. David N. Allan
C. J. Tower & Sons
645 Griswold Street
Detroit, Michigan 48226

Dear Mr. Allan:

Your letter on behalf of your client, Canadiana Outdoor Products, dated September 26, 1985, and addressed to our New York office requesting a ruling regarding the tariff classification of SnoRacers, has been referred to our office for direct reply to you.

The Noma SnoRacer is constructed as an article with two parallel ski-type runners attached by means of a tubular steel frame to a center seat which is long enough to hold two people. In front of that seat is a steering column and wheel. The tubular steel frame joins the seat and runners to the steering column. A center ski-type runner is controlled by the steering wheel. A tension spring apparently controls the steering mechanism. A brake lever is mounted to the right of the steering wheel and activates a ground metal piece which digs into the snow.

The importer describes the merchandise as a recreational snow sled and believes that since it is similar in use to a toboggan, the article should be classified as a toboggan in item 734.95, Tariff Schedules of the United States (TSUS). The merchandise has been entered under the provision for skis and ski equipment, snow shoes, sleds and toboggans: other, in item 735.06, TSUS. Consistent with this entry is New York Ruling 805529 which has classified identical merchandise in item 735.06, TSUS. Finally, under present consideration is the classification of this merchandise under the provision for sport, gymnastic, athletic, or playground equipment..., not specially provided for, in item 735.20, TSUS.

We find that certain features of the Noma SnoRacer such as the raised seat which permits the user to sit upright, and the additional front runner, distinguish it from a toboggan, thus precluding classification in item 734.95, TSUS.

69

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Furthermore, the SnoRacer does not fit any of the descriptions for skis or ski equipment, snowshoes, or sleds.

On the other hand, articles similarly constructed and used for downhill sliding on snow have been classified under the provision for ... sport, gymnastic, athletic or playground equipment,..., not specially provided for, in item 735. 20, TSUS. CIE 1740/64, August 31, 1964, held that a "Jet-Ski-Scooter" produced in Canada and built with one or two bicycle-type seats was classifiable in item 735.20, TSUS, rather than as a sled in item 735.06, TSUS. In addition, CIE 1074/65, July 28, 1965, classified very similar merchandise under item 735.20, TSUS. Marketed as a "Ski-Bob", this article was constructed with a saddle seat, two skis attached to frame, and a short front ski steered by a hand grip. Nearly identical to the instant merchandise and classified under item 735.20, TSUS, was the "Novoslei Snow Go-Kart", which had a tubular frame joined to a center seat. The frame joined the seat to the steering wheel which controlled the center ski-type runner with a tension spring. See Ruling 040946, August 26, 1975.

In view of the foregoing precedent and the distinguishing characteristics of the Noma SnoRacer, we find the merchandise which is the subject of this ruling request to be properly classifiable under the provision for ... sport, gymnastic, athletic, or playground equipment..., not specially provided for, in item 735.20, TSUS, dutiable at the rate of 5.04 per cent ad valorem.

In New York ruling letter 805529, a similar article, the model GT-73-4121 was held to be classifiable in item 735.06, TSUS. Inasmuch as this decision is contrary to the classification above, it is revoked pursuant to 19 CFR Part 177.9, Customs Regulations.

Sincerely,

Arthur P. Schaffer

Ms. Josiane M. Chami
Arosa Overseas, Inc.
5, Pre d'Orsat, P.O. Box 167
CH 1245 Collonge-Bellerive
Switzerland

Dear Ms. Chami:

In your letter of February 27, 1986, you request a ruling on the tariff classification and rate of duty for certain watches produced in Switzerland. You also request information on the acceptable markings and on the requirements for a single filing of information on the watches.

The watches are described as follows:

1. Movement: 100% Swiss made, quartz (battery operated) 1 jewel, unadjusted, calibres 6-3/4 and 11-1/2, complete with battery.

2. Case: Polyester, waterproof to 100 feet.

3. Bracelet: Elastomer (plastic).

Watches with quartz analog movements are classifiable as watches in item 715.05, Tariff Schedules of the United States (TSUS). Under Headnote 3(a), Subpart E, Part 2, Schedule 7, TSUS, the complete tariff citation for watches includes item 715.05 and the specific provisions for the movement and case.

The unadjusted quartz movement with 1 jewel is an electromechanical mechanism that possesses moving parts (stepping motor, gear train) and is controlled by the quartz crystal. It is classified in item 716.09, TSUS, dutiable at 36 cents each. The plastic case is classified under the provision for other cases in item 720.28, TSUS, and dutiable at 4.1 cents each plus 8.7 percent ad valorem. Therefore, the watches (each watch consisting of a movement and case only) are classified in item 715.05-716.09-720.28, TSUS, and are dutiable at the above rates as though the movements and cases are imported separately.

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Watchbands are separately classified. Bands of rubber or plastics are classified under the provision for other articles, not specially provided for, of rubber or plastics, in item 774.55, TSUS, and dutiable at 5.7 percent ad valorem.

The batteries are also separately classifiable under the provision for primary batteries in item 682.95, TSUS, and dutiable at 5.7 percent ad valorem if they are products of Switzerland.

The name or the logo of a U.S. customer may appear on the dial along with the "Swiss Made" marking. Likewise, the name of the Swiss manufacturer may also be engraved on the case. You should, of course, be aware of the special marking requirements of Schedule 7, Part 2, Subpart E, TSUS, copy enclosed (see also page 46 of the pamphlet "Importing Into the United States," copy enclosed), applicable to the various watch components.

You should also be aware that a bill, H.R. 2029. to amend these requirements is now pending before Congress and it is likely to be enacted. However, until such time a bill is enacted, the special marking requirements are applicable.

The filing of information, referred to in the publication "Importing Into the United States," is a procedure designed for mechanical adjustments on mechanical watches. Quartz analog watches do not have such adjustments. For example, the adjustment made to a trimmer capacitor is not an adjustment for tariff purposes. If you have any further questions on this or any other matter involving the classification and entry of watches, please contact Mr. Lou Piropato, the Customs National Import Specialist, at 212-466-5895, or the appropriate import specialist at the port of entry for your merchandise.

Sincerely,

Arthur P. Schaffner

Mr. Luc C. Pamerleau
USA Marketing Division
USA Trading & Investment Development
Department of External Affairs
125 Sussex Drive
Ottawa, Ontario, Canada K1A OG2

Dear Mr. Pamerleau:

Your letter of September 30, 1985 (UTM-2418 6056-USA/6), to the Regional Commissioner of Customs, New York Seaport, inquiring as to the tariff classification of certain refrigerated containers from Canada, has been forwarded to us for reply.

Our New York office reponded to you concerning those containers with refrigeration elements. The remaining units are so-called passive containers or boxes and range in size from the portable 2-man pack (5-6 cu. ft.) to larger units on skids (40-50 cu. ft.). They have a light gauge aluminum exterior with 4 to 6 inches of polyurethane foam insulation held in place by an aluminum or plastic liner. Hinges and handles will be of steel.

You have suggested the possible applicability of item 772.20, Tariff Schedules of the United States (TSUS), the provision for containers, of rubber or plastics, with or without their closures, chiefly used for the packing, transporting, or marketing of merchandise. However, there is insufficient evidence to establish that these containers are in chief value of the polyurethane. More importantly, these containers are said to be used in fishing, food processing, and recreational hunting applications, as well as to store military field rations. These articles are similar in function to picnic coolers which hold or store food. In such applications, the transporting of the food is clearly secondary. Consequently, classification in item 772.20, TSUS, is not believed applicable.

The described containers would be classifiable under the tariff provision for other articles of plastic, chiefly used for preparing, serving, or storing food or beverages, or food or beverage ingredients, in item 772.15, TSUS. We assume, of course, that the polyurethane foam insulation is confirmed as the component material in chief value. The duty

G13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

rate under item 772.15, TSUS, is 4 percent ad valorem. If aluminum is found to be the component material in chief value, the subject containers would be classifiable under the tariff provision for articles of aluminum, not coated or plated with precious metal, in item 657.40, dutiable at the rate of 6.2 percent ad valorem.

Sincerely,

Arthur P. Schaffer

Mr. Peter Boyce
Managing Director
The Marketing Man Pty. Ltd.
1st Floor
316-320 St. Kilda Road
St. Kilda 3182
Australia

Dear Mr. Boyce:

You have requested a tariff classification ruling for a calendar, printed in Australia, that you plan to distribute in the United States.

The submitted sample, "Sons' [sic] of Sydney Beaches Calendar," consists of seven sheets of glossy paper, each approximately 12 inches by 24 inches, laid one upon another and fastened together through the center with two wire staples. When folded across the center, the calendar is closed; when opened out, it can be hung up by means of a small hole at the top of each page. Color photographs of men in swimsuits are paired with a calendar grid for each month.

Assuming that the calendar has been printed in whole or in part by a lithographic process, it is classifiable in Part 5 of Schedule 2 under item 274.10, Tariff Schedules of the United States (TSUS), if not over 0.020 inch in thickness; or under item 274.15, TSUS, if over 0.020 inch in thickness. If the calendar is a product of Australia, the Column 1 rate of duty will apply. The 1986 Column 1 rate for item 274.10 is .5 cent per pound; for item 274.15, 2.1 cents per pound. Further reductions are scheduled: as of January 1, 1987, the Column 1 rate for item 274.10 will be "Free"; for item 274.15, it will be 2 cents per pound.

Headnote 3 of Part 5 provides that the "thickness" of printed matter produced by a lithographic process "is that of the thinnest paper contained therein, except that the thickness of a permanently mounted lithograph is the combined thickness of the lithograph and its mounting." Therefore it is necessary to determine whether the calendar contains "permanently mounted" lithographic prints.

A3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Because your calendar is attached to a thicker backing that forms the cover, we consider it to be "mounted." However, because of the non-permanent nature of the fastening, that is, the two wire staples, the calendar is not "permanently mounted" for purposes of Headnote 3 to Part 5 of Schedule 2, TSUS. Therefore, the thickness relevant for determining the rate of duty under item 274.10 or 274.15, TSUS, is that of the thinnest page, as indicated above. This decision is in line with that in our recent ruling 077644 of May 14, 1986 concerning a calendar fastened in a similar manner.

Sincerely,

Arthur P. Schaffner

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

077998

DATE: MAY 29 1986

FILE: CLA-2:CO:R:CV:G
077998 c

TO : Area Director of Customs
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 102/85 Concerning the Tariff Classification of Corrugated Polypropylene Plastic Sheets Manufactured in Hungary.

FACTS:

The merchandise involved designated as "Cariplast" corrugated plastic sheets will be produced in standard sizes of 96 inches long, 48 inches wide and 4 millimeters thick. However, these sizes may be varied to meet different customer requirements. The sample submitted is an extruded polypropylene plastic sheet with smooth surfaces covering cells running the entire length of the material. After importation the sheets may be used as packaging, sign boards and glazing material.

The inquirer maintains that the product is classifiable under the provision for other film, strips and sheets, all the foregoing which are flexible: wholly or almost wholly of rubber or plastics: not of cellulosic plastics materials in item 771.43, Tariff Schedules of the United States (TSUS).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

AS

079698

ISSUE:

Is the merchandise classifiable as film, strips and sheets in item 771.43, TSUS, or as other profile shapes in item 771.55, TSUS?

LAW AND ANALYSIS:

The inquirer asserts that this product is a "profile shaped sheet". The rationale for this assertion is said to be implied by the use of the phrase "other profile shapes" in the superior heading to items 771.43 and 771.55, TSUS. This phrase is interpreted to mean that all the preceding named articles are considered profile shapes for tariff purposes. If a profile shape meets the dimensional requirements of the headnote, is not of cellulosic plastics, and is flexible, it must in the inquirer's opinion be classified in item 771.41 or 771.43, TSUS.

It is clear from Schedule 7, Part 12, Subpart B, Headnote 1, TSUS, that the superior heading involved describes three different groups of merchandise, namely, blocks and slabs in bulk forms, film, strips, sheets and plates, and filaments, rods, seamless tubing, and profile shapes. In context, the phrase "other profile shapes" refers to profile shapes other than those in the form of filaments, rods or seamless tubing. That such items are viewed as profile shapes is noted in the Summary of Trade and Tariff Information No. 7-12-10 (February, 1981), p.2 where it is stated "profiles may take the form of long strips, filaments,

A6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

rods, seamless tubing, rectangular or cubical solids, trapezoidal rods, and other various intricate shapes..."

The distinguishing characteristics of a profile shape are its intricate cross sectional design and the continuity of that pattern throughout the length of the article. In Sekisui Products, Inc. v. United States, 63 Cust. Ct. 123, C.D. 3885 (1969), a profile shape was described as an article that has "a complexity of curves and surfaces as opposed to either a plane or round surface, or a corrugated surface that is exceedingly simple."

From the above explanation of what a profile shape is, it is apparent that a flat, rectangular solid may be a profile shape if it has an intricate, continuous cross sectional design. A sheet, on the other hand, is more broadly defined in terms of its length, width and surface condition. The subject material is formed by extrusion and has an intricate, multi-surface, cross sectional design. It conforms to the more demanding requirements as a profile shape. As noted previously, profile shapes and sheets are different commodities for tariff purposes, and are separately provided for.

HOLDING:

The "Cariplast" corrugated plastic sheets are classifiable under the provision for other profile shapes,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077998

A7

wholly or almost wholly of plastics in item 771.55, TSUS.

You should inform the inquirer of this ruling.

Miss H. K. W. Ho
Second Secretary
Hong Kong Commercial Affairs
British Embassy, Hong Kong Office
3100 Massachusetts Avenue, N.W.
Washington, D.C. 20008

Dear Miss Ho:

Your letter requesting reconsideration of the textile category assigned to certain 100 percent polyester, two piece, woven suit dresses has been referred to this office for reply. A sample, style 841, was submitted along with your letter.

The submitted sample consists of a matching dress and jacket manufactured from a 100 percent woven polyester fabric.

A memorandum from Ms. Shirley Hargrove of the Department of Commerce states that the instant suit dresses were entered on Customs entry number 86-380710-7, dated November 6, 1985, at JFK Airport in New York. Our New York office advises us that the suit dress set was presented at JFK with a visa for category 636. The JFK import specialist required an additional visa with textile category number 635 for the jacket.

The Hong Kong Trade Department (hereafter referred to as "Hong Kong") and your office think that category 636 is applicable to the entire suit dress. It is your opinion that both the United States and Hong Kong classify two piece suit dresses in category 636 if the two pieces are identical in fabric and color. You ask us to review the textile category number and to correct the import statistics for categories 636 and 635 if we find that the suit dresses should have been entered in category 636 exclusively.

In Customs Headquarters Ruling Leter (HRL) 076799, dated November 14, 1985, we ruled that a sundress and a matching bolero style jacket were separately classifiable and had two different textile category numbers, pursuant to changes effected by the Trade and Tariff Act of 1984, Pub. L. 98-573 (approved October 30, 1984). Section 122 of the Act added a Headnote 3 to Part 6 of Schedule 3, Tariff Schedules of the United States (TSUS). Headnote 3 provides that — with certain exceptions — each garment is to be separately classified under the appropriate tariff number, even if two or more garments are imported together and are designed to be sold together at retail.

In accordance with HRL 076799 and Headnote 3, Part 6, Schdule 3, TSUS, the jacket and the dress are separately classifiable. The dress is classifiable under the provision for other women's wearing apparel, not ornamented, of man-made fibers, not knit, other, other, dresses, in item 384.9425, TSUS, dutiable at the Column 1 rate of 18.8 percent ad valorem plus 4 cents per pound. The dress requires a visa for textile category 636. The jacket is classifiable under the provision for other women's wearing apparel, not ornamented, of man-made fibers, not knit, other, coats, suit-type coats and jackets, in item 384.9143, TSUS. The jacket requires a visa for category 635.

Sincerely,

Harvey B. Fox

Miss H.K.W. Ho
British Embassy
Hong Kong Office
3100 Massachusetts Avenue, N.W.
Washington, D.C. 20008

Dear Miss Ho:

We are responding to your letter dated September 9, 1985, on behalf of Fieldston Clothes, that has been forwarded by the Department of Commerce.

Apparently, shipments of infants' snowsuits consisting of a jacket and matching bib overalls were denied entry at the port of Boston, Massachusetts because they lacked visas for categories 635 and 659, respectively.

You state that it is the practice of the Hong Kong Trade Department to issue visas for category 659 to such garments that are meant to be worn together as a suit and are designed to protect the wearer from the elements.Essentially, you are arguing that the two-piece snowsuit is classifiable as an entirety, thus, requiring a single visa for the two garments.

The matching jacket and bib overalls have woven nylon shells and linings and a polyester filling. The jacket has a full front zipper opening, a waist drawstring, side pockets, cotton corduroy inserts at the yoke and arms, and a detachable zippered hood with a drawstring closure. The jacket is ornamented by woven fabric with a front button closure that is inserted between seams, at the neckline and over the zipper opening. The bib overalls have fabric overlays at the knees, elasticized shoulder straps and a partial rear zipper opening.

We have not been informed of the size range for this importation. We note, however, that the submitted sample is in infants' toddler size 3. Normally, this numerical designation indicates that the items are imported in the infants' toddler size range 2-4.

Congress enacted Headnote 3, Part 6, Schedule 3, Tariff Schedules of the United States (TSUS) as part of the Trade and Tariff Act of 1984, Pub. L. 98-573, which provides that,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

All

with certain exceptions, each garment is to be separately classifiable under the appropriate tariff provision even if two or more garments are imported together and are designed to be sold together at retail. The purpose of the law was the elimination of most commercial tests used in classifying two-piece garments as entireties.

Paragraph (b) of this new headnote excludes the following garments from the effects of the headnote: (i) suits, (ii) pajamas and other nightwear, (iii) playsuits, washsuits and similar apparel, (iv) judo, karate, and other oriental martial arts uniforms, (v) swimwear, and (vi) infants' sets designed for children who are not over 2 years of age.

The issue is whether the snowsuit is classifiable as an entirety under one of the foregoing exceptions. You have stated that these garments are intended to be worn together as a "suit". Subsection (i) excludes suits from the scope of the headnote. Suits are defined in The Random House College Dictionary, 1968 ed. as "2. A set of men's garments of the same color and fabric, consisting of trousers, a fitted jacket, and often a vest. 3. A similarly matched set of women's garments consisting of a skirt and jacket, and sometimes a topcoat". It is our view that this snowsuit is outside the common meaning of the term "suit".

The other exception that conceivably may apply to the merchandise is subsection (vi) infants' sets designed for children who are not over 2 years of age. The snowsuits are sized for children over 2 years of age; therefore, they do not qualify under this exception.

These garments are not classifiable as an entirety under the wearing apparel provisions. They must be classified under separate tariff provisions. The jacket is classifiable under the provision for other women's, girls' and infants' wearing apparel, ornamented: of man-made fibers: not knit: coats: infants: other in item 383.2223 (now 384.2323), TSUSA, under category 635. The bib overall is classifiable under the

provision for other women's. girls' and infants' wearing apparel, not ornamented: of man-made fibers: not knit: other: other: in item 383.9297 (now 384.9497), TSUSA. This tariff provision requires a visa from Hong Kong for category 659.

Sincerely,

Harvey B. Fox

Mr. John M. Kloman III
Med Tec International
1511 K Street
Washington, D.C. 20005

Dear Mr. Kloman:

This is in response to your letter of January 8, 1986, requesting a ruling concerning the classification of a surgical towel. Samples have been submitted. The record indicates that the towels are products of Guatemala.

The identical samples are of 100 percent woven cotton fabric. You assert that the towel is prewashed at the factory after dyeing. The towel measures 18 inches by 30 inches. You state that the towel is to be used in medical applications including, but not limited to, providing a sterile area during surgery.

The towel is classifiable as other furnishings, not ornamented, of cotton, other towels, not jacquard-figured, under the provisions of item 366.26, Tariff Schedules of the United States (TSUS), dutiable at the rate of 11.3 percent ad valorem. A visa is required for the importation of such towels under category number 369.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

TO : District Director of Customs
Houston, Texas 77057-3012

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice No. 14/86, Your File CLA-2-H:C:C2 of February 10, 1986

This request involves the question of whether a triangular label on a particular pair of jeans constitutes ornamentation for tariff purposes. You have determined that it does. The initiator of the request, Givens, Kelly and Shaw on behalf of Scope Imports, Inc., argues that it does not. For the reasons stated below, we are in agreement with your position.

Photographs sent by the requesting party show the same type of label on the front of several different garments. On the sample pair of jeans, it is stitched on at the left front pocket opening just forward of the side seam and about two inches below the bottom of the waistband. It is made of a woven fabric coated or laminated with a light beige-colored plastics material textured to simulate leather and stitched to the jeans with the same gold-colored thread used for the rest of the top-stitching on the garment. The label is shaped like a right triangle and measures about 1-1/2 inches along the hypotenuse. The lettering, which is black, includes the words "trademark" and "authentic" in block letters along the legs of the triangle and the trademark "Dax" in larger block letters spread along the hypotenuse.

Headnote 3, Schedule 3, Tariff Schedules of the United States (TSUS), provides that articles of textile materials, such as these jeans, may be ornamented by the use of a variety of types of ornamentation, including textile fabric. Further, Headnote 2 provides that textile materials include the fabrics provided for in Part 3 and 4 of Schedule 3. Part 4C provides for woven fabrics coated or laminated with rubber or plastics.

Hence the fabric of which the label is made is of the type that may constitute ornamentation. Previous rulings that determined that similar fabrics were of the type that could constitute ornamentation when applied to a finished garment include 033658 of May 13, 1974, and 022725 of May 8, 1973.
